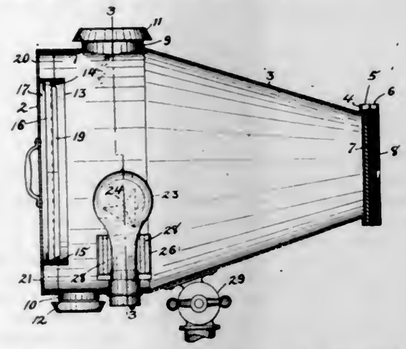
1. A clothes drainer of the character described comprising a clothes-support and a handle pivotally connected at an end thereof, said handle consisting of a body-member composed of a single piece of wire bent and formed to provide a pair of arms, a suspension-hook intermediate of said arms and pivot-loops at the lower ends of the same, and a hand-grip connected at the upper ends of the arms.

1,510,078. WELDING AND FORGING DIE. PRESTON M. HALL, Swampscott, Mass. Original application filed Jan. 20, 1922. Divided and this application filed Apr. 30, 1923. Serial No. 635,465. 3 Claims. (Cl. 219—4.)



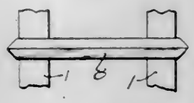
1. An electrical welding and forging die tapered or cut back from the edge of the forging cavity and forming a trimming edge for trimming away excess metal around the forged part of the work as and for the purpose described.

1,510,079. PROPELLER PENCIL. GEORGE REGINALD HUDSON, London, England. Filed Feb. 2, 1922. Serial No. 533,616. 3 Claims. (Cl. 120—18.)

3. In a propeller pencil, in combination, a carrier for the lead, a tubular member surrounding the carrier, a slot in the said member, a key on the carrier projecting into the slot, an opening in the key, a wire helix surrounding the tubular member engaging in the said opening, a casing fixed to the front part of the tubular member, a holder making frictional engagement with the helix enclosing the tubular member and abutting against the said casing, an internal shoulder near the rear end of the holder, a collar on the rear end of the tubular member, and a compression spring inserted between the said shoulder and the washer to maintain the rubbing contact between the front end of the holder and the casing fixed to the tubular member.

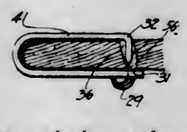
1,510,080. THERAPEUTIC RAY APPLIANCE. DAVID S. MURPHY, Fort Wayne, Ind. Filed Aug. 9, 1922. Serial No. 580,663. 4 Claims. (Cl. 240—1.)

1. In therapeutic ray apparatus, an enclosure consisting of a drum with a contiguous frustum at one end thereof and a removable head at its other end and also a ventilating outlet at its top and bottom; an open frame at the mouth of the frustum having recesses therein spaced apart; filter plates removably positioned in the corresponding recesses and being held apart so as to admit of circulation of air therebetween; a radiator in the drum; an annular flange extending inwardly from the head of the drum; a mirror member comprised of two similar portions spaced apart and positioned within the flange; two reflecting strips arranged adjacent each other and positioned between the mirror portions, the forward edges of said strips projecting beyond the corresponding faces of said portions and presenting angular faces, there being a ventilating space between said mirror member and the head of the drum and also ventilating openings in said head; a pair of auxiliary reflecting members adjustably positioned within the drum, one on each side of the radiator and each having a series of glass strips arranged side by side with their upper edges exposed; and a pair of prisms adjustably positioned within the drum one on each side of the radiator, said auxiliary reflectors and prisms being adapted to be severally tilted at various angles.



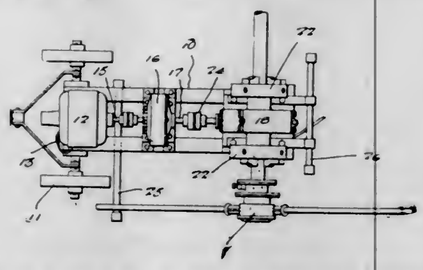
1,510,081. PAINT MIXER. LORIN D. RULAND, Binghamton, N. Y. Filed Mar. 25, 1924. Serial No. 701,864. 2 Claims. (Cl. 259—107.)

1. In a paint mixer, a rotating shaft adapted to be pivotally mounted in a container, the shaft having an upper paddle vertically mounted therein, consisting of two oppositely disposed parallel arms spaced apart, on each side of the shaft, a wire mesh mounted between the arms, a lower paddle spaced apart from the upper paddle comprised of an oppositely disposed projecting arm on each side of the shaft vertically mounted therein, in alinement, each arm having on one side a metal plate having at its upper edge an outward projecting hori-



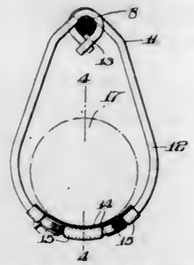
zontal blade, and at its lower edge an outward projecting downwardly inclined blade, the plate and blades on one arm mounted on the opposite side from the plate and blades of the other arm, a pivot projection on the lower end of shaft, a turn handle mounted on top of shaft for rotating the same.

1,510,082. WALL FORM. JOHN AARSRUD, Chicago, Ill. Filed Apr. 10, 1922. Serial No. 551,115. 1 Claim. (Cl. 25—131.)



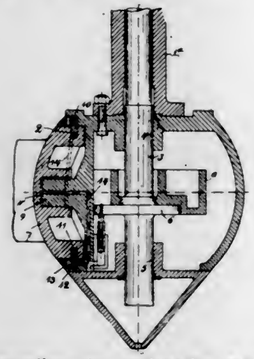
A wall form comprising a frame for holding wall forms in position on the wall, said frame consisting of U-shaped members constructed or angle irons, the vertices of said irons being disposed on the outer side of the frame, reenforcing plates disposed at the bend in the said U-shaped member, a bar connecting said plates together, bolts connecting the free ends of each frame together, wall forms having openings adapted to receive said bolts whereby said wall forms are supported in adjusted position on the wall, the tops of said forms bearing against the bar whereby they are prevented from swinging inwardly.

1,510,083. EAR TAG. ARTHUR H. BERNTSON, Salt Lake City, Utah. Filed Apr. 18, 1922. Serial No. 555,473. 4 Claims. (Cl. 40—3.)



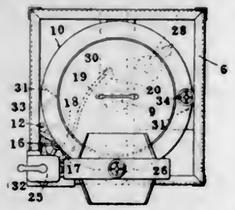
4. In an ear tag made from a flat strip of material and comprising a body portion having a tongue-base portion at one end thereof with an eyelet portion at the other end; the combination therewith, of a buttress integrally formed in the said tongue-base portion, the said buttress having approximately the form of a half hollow cone, the base of the cone being adapted to bear against a face of the said body portion, for the purpose specified.

1,510,084. PORTABLE POWER DRIVE. CHARLES F. BRAINERD and GEORGE H. TOULSON, Endicott, N. Y. Filed Dec. 11, 1922. Serial No. 606,262. 3 Claims. (Cl. 10—89.)



3. In a device of the character described, a support, a motor driven shaft mounted thereon and carrying chucks adapted to hold an element to be cut, a cutting tool having a handle, and a pair of rods slidable across the support at opposite sides of the shaft, either rod being adapted to have either end extended into position for engagement by the handle of the cutting tool whereby to act as a stop for holding the tool stationary.

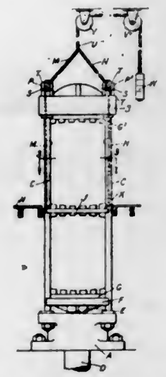
1,510,085. CABLE SUPPORT. ORSON W. BRENIZER, Philadelphia, Pa., assignor of one-fourth to Andrew V. Groupe, Philadelphia, Pa. Filed Aug. 13, 1920. Serial No. 403,196. 10 Claims. (Cl. 248—33.)



1. A cable support comprising a messenger wire, two spaced hangers connected thereto and depending therefrom and provided with means to prevent longitudinal displacement thereof relatively to the messenger wire, each hanger being provided with a loop adapted to receive and confine a cable therein, and a cable receiving and supporting plate extending between and supported by said hangers within the said loops thereof and provided with means to prevent displacement thereof relatively to one of said hangers.

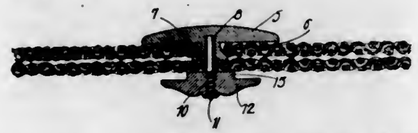
1,510,086. ARRANGEMENT AT HUBS FOR TURBINE, PUMP, OR PROPELLER WHEELS WITH TURNABLE VANES. JOHN ELOV ENGLESSON, Kristinehamn, Sweden. Filed Mar. 14, 1923. Serial No. 624,937. 15 Claims. (Cl. 170—163.)

1. In a propeller, the combination with a hub and vanes rotatably mounted therein, of a central pivot for each vane and an annular bearing member engaged by the vane, said bearing member being adapted to resist only forces parallel to the axis of said pivot.



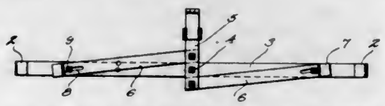
1,510,087. WASHING MACHINE. THOMAS L. JONES and HENRY J. GILLMANN, Belleville, Ill. Filed Nov. 12, 1921. Serial No. 514,608. 3 Claims. (Cl. 68—18.)

1. In a device of the class described, the combination with a receptacle having imperforate vertical walls and



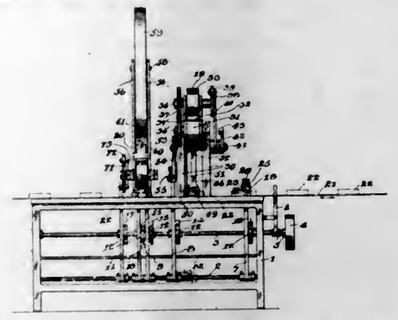
mounted on a vertical axis, of means for oscillating said receptacle on its axis, and a duplex baffle plate carried on the periphery of said receptacle, said baffle plate having two oppositely disposed concave faces, the edges of said plate contacting with the vertical walls of said receptacle.

1,510,088. DUMPING PRESS. CHRISTOPHER CULLEN HUGHES, Bondi, New South Wales, and JOHN LEWIS, Waverley, New South Wales, Australia. Filed Sept. 18, 1923. Serial No. 663,440. 4 Claims. (Cl. 100—19.)



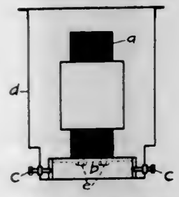
1. In a bale dumping press having sufficient drift between the moving platen and fixed head to admit two bales one superposed on the other, a double-sided floating follower arranged horizontally, means for temporarily supporting same in an approximately midway position in the press but permitting it to be moved towards one end thereof, and means for temporarily supporting it in a position near one end of the press.

1,510,089. BUTTON. GEORGE KELLOG, New York, N. Y. Filed July 26, 1923. Serial No. 653,986. 1 Claim. (Cl. 24—105.)



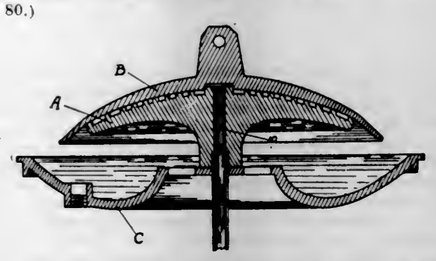
A button of the class described comprising a head, having a truncated, pyramidal shank, a stud secured within the shank, said stud having a threaded portion and a pointed extremity for piercing the material or fabric, and a cap threaded on the stud for fastening the bottom face of the shank to the fabric.

1,510,090. RAIL TIE. JAMES PERRY LAIRD, Sr., Carnwath, Pa. Filed Mar. 7, 1924. Serial No. 697,660. 2 Claims. (Cl. 238—51.)



1. In a device for the purpose set forth, a base plate having lipped ends to engage the outer base flanges of rails, a bar centrally pivoted to the base plate, plates pivotally secured to the bar and having outer rail engaging lips, guide means between the said plates and the base plate, and a clamping element hingedly secured to the bar designed to be swung over one of the plates and to be secured to said plate and to the base plate.

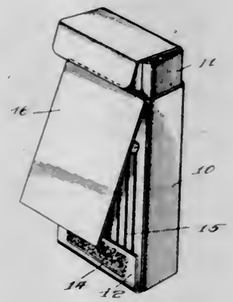
1,510,091. LABELING MACHINE. CHARLES W. LAKEY and EDWARD L. CROUCH, Winston-Salem, N. C., assignors to E. Lewis Evans, secretary-treasurer of The Tobacco Workers International Union, Louisville, Ky. Filed Mar. 15, 1923. Serial No. 625,365. 6 Claims. (Cl. 216—25.)



5. A level feeding severing and applying means comprising standards adapted to support a roll of labels in strip form guide and feed rollers located between the standards to feed the strip downward, spaced guides between the standards to receive the marginal edges of the end of the label strip, shearing means located above said guides, a plunger affixing means reciprocable between said guides and means for operating the feed rollers, shearing means and affixing plunger in succession in predetermined order.

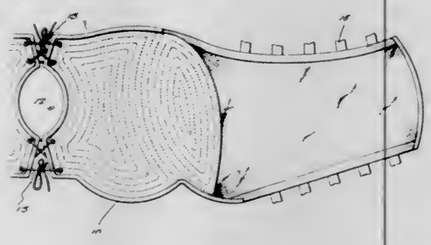
1,510,092. MEANS FOR FIXING TRANSFORMERS IN THEIR OIL BOXES. EMIL LAPP, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Filed Apr. 2, 1919. Serial No. 287,094. 2 Claims. (Cl. 175—361.)

1. In means for fixing a transformer in its oil box for transport and like purposes, the combination with said oil box and the transformer body of fixing members such as screws or bolts adapted to come into operative contact with a foot attached to the core of said transformer said fixing member being operable from the outside of said oil box.



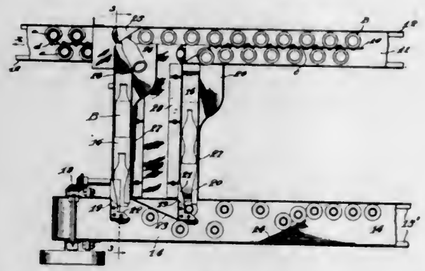
1,510,093. GENERATOR HEAD FOR FUEL-OIL BURNERS. SAMUEL H. LESH, Lincoln, Nebr. Filed Nov. 20, 1923. Serial No. 675,887. 7 Claims. (Cl. 158—80.)

1. In an oil burner of the kind comprising a generator head and a hood therefor and wherein the upper sur-



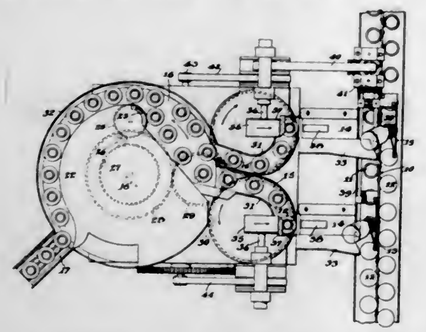
face of the generator head is convex, means being provided for delivering fuel oil to the generator head at its topmost point, spirally arranged ribs on the upper surface of the generator head, said ribs having passages therebetween for conveying the fuel oil toward the periphery of the generator head, said ribs being also so formed as to restrict both the inlets and the outlets of the oil passages.

1,510,094. CIGARETTE BOX. GERTRUDE A. MACVEY, Brooklyn, N. Y. Filed Feb. 19, 1923. Serial No. 619,890. 1 Claim. (Cl. 206—48.)



As a new article of manufacture, a cigarette box having a face wall extended at one end to provide a relatively short integral flap, said flap being returned to overlie the outer face of said wall, the outer face of the returned flap being provided with a striking surface, a match pack inserted between the returned flap and the adjacent wall of the box, means disposed through the flap, the wall and the inserted portion of the match pack for holding the flap in overlying relation and the match pack against displacement, said face wall of the box at the end thereof opposite to the flap being provided with an integral elongated flap returned to overlie the outer face of said wall and of a length to engage between the first named flap and the match pack to protect the pack.

1,510,095. PAD. ELMER MADDEN, Mount Washington, Md. Filed May 18, 1923. Serial No. 639,957. 1 Claim. (Cl. 2—2.)

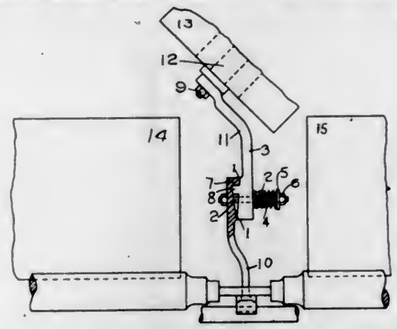


A protective garment adapted to be worn by athletes, and comprising two identically constructed sections, each section including a split sleeve like portion adapted to receive an arm of the user, elastic tapes connecting the free edges of said sleeve like portion to hold the latter tightly about the arm, a pad connected with each sleeve portion at a point immediately above the elbow, said pad being designed to cover the remaining portion of the arm, shoulder, and a portion of the back and chest, the pads of the respective sections being cutaway at the adjacent ends thereof to unitedly define a neck receiving opening and said pads being laced together at the front and back of the user.

1,510,096. AUTOMATIC BOTTLE UNLOADER. CHARLES ALVIN MILLER, Bainbridge, Ga., assignor to Miller Manufacturing Company, Decatur County, Ga., a Corporation of Georgia. Filed July 29, 1922. Serial No. 578,358. 12 Claims. (Cl. 198—33.)

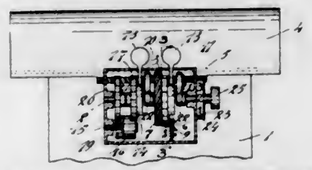
1. The combination with a carrier on which bottles are adapted to be supported in inverted position, of a bottle support arranged laterally thereof and below the level of the same, an endless belt extending between said carrier and support, one terminal of the upper run of said belt being above said support whereby a drop is had between said support and belt, means extending over said carrier in the path of the bottles carried thereon and causing the bottles to topple over onto said belt, and an abutment spaced from the said belt terminal and overlying said support, the bottles being carried bottom forward toward said abutment but passing below the same and landing bottom down on said support, the necks of the bottles striking said abutment as the bottles drop, said abutment preventing overturning of the bottles after they land on said support.

1,510,097. AUTOMATIC BOTTLE UNLOADER. CHARLES ALVIN MILLER, Sr., Bainbridge, Ga., assignor to Miller Manufacturing Company, Decatur County, Ga., a Corporation of Georgia. Filed May 5, 1923. Serial No. 636,893. 9 Claims. (Cl. 198—22.)



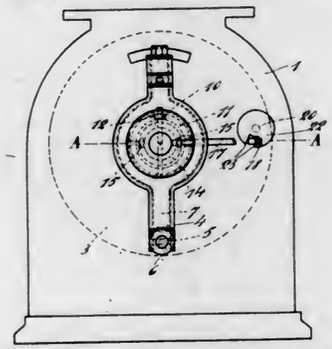
1. In combination, a bottle drop down which bottles may slide bottom foremost, a rotary table on which the bottles are received from said drop, a rotary platform adjacent said table, means for guiding bottles from said table to said platform for placement on the outer edge of the same, and an endless conveyer leading from said platform onto which bottles are received from the platform.

1,510,098. COMBING MACHINE. JOHN W. NASMITH, Manchester, England. Filed Mar. 21, 1923. Serial No. 626,660. 2 Claims. (Cl. 19—115.)



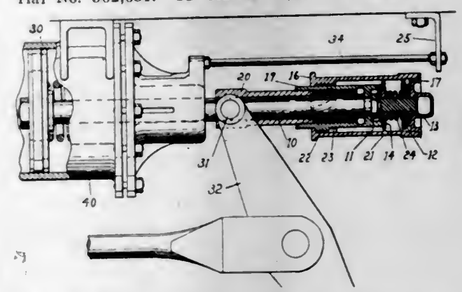
1. In a combing machine creel, means for carrying a reserve lap and swinging the carrying means downwards to be within easy reach of the operative, such means comprising a pivoted arm, means for retaining such arm

in the desired position, and a holder for the reserve lap, such holder being mounted on the pivoted arm in



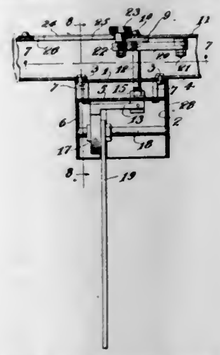
such a manner that its reserve lap in its reserve position lies diagonally between adjacent laps in their working position.

1,510,099. CALCULATING MACHINE. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed May 2, 1922. Serial No. 557,864. 11 Claims. (Cl. 235—63.)



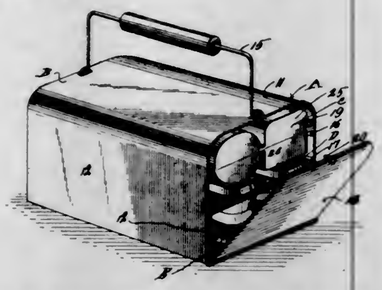
3. In a calculating machine, means for setting the slidable carriage which supports the indicating discs, etc., including a shaft rotatably supported in the frame work, a worm wheel fixed to said shaft, a threaded member on the carriage of the machine engaging said worm wheel, a toothed feeder wheel and a toothed locking wheel rigidly connected to the worm wheel, a second toothed feeder wheel and toothed reversing wheel, rotatably mounted on said shaft, means for locking the locking wheel, levers pivotally mounted on the shaft, keys pivotally connected to the levers and engageable with the feeder wheels for rotating the shaft in opposite directions, a gear fixed on said shaft, and gears connecting the last mentioned gear to said reversing wheel.

1,510,100. CALCULATING MACHINE. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed Nov. 17, 1922. Serial No. 601,586. 5 Claims. (Cl. 235—130.)



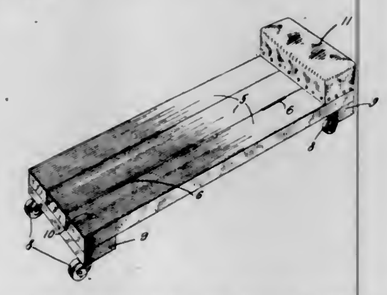
1. An improvement in calculating machines of the type wherein the crank for rotating the calculating wheels is associated with a locking device for locking the crank in zero position, characterized by the combination of a guiding device adapted to maintain the locking device for the crank in inactive position during the rotating of the crank, and a locking device cooperating with a cam disk positively forced into engagement with the cam disks and locking the latter in relation to the calculating wheels when the locking device for the crank is brought to inactive position, the said locking device for the cam disks being brought completely out of gear with the cam disks and liberating them when the locking device for the crank is being brought into active position.

1,510,101. AUTOMATIC SLACK ADJUSTER. ALDEN E. OSBORN, New York, N. Y. Filed May 22, 1922. Serial No. 562,651. 12 Claims. (Cl. 188—202.)



5. In an automatic slack adjuster the combination with an air cylinder, a piston slidable therein and a piston rod connected to said piston and extending beyond the said cylinder, of a threaded sleeve longitudinally slidable on said piston rod, a brake operating lever pivotally connected to said sleeve, a nut rotatably mounted on said piston rod and engaging the thread on said sleeve, a longitudinally slidable element, and means whereby, when said slidable element is moved in relation to and parallel with the direction of motion of said piston rod, said nut is rotated to cause said sleeve to move in relation to said piston upon the piston exceeding a pre-determined movement in said cylinder.

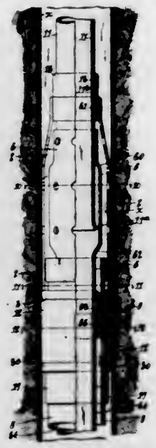
1,510,102. SIGNAL DEVICE FOR VEHICLES. LORENZO PACE, Allentown, Pa. Filed Dec. 23, 1922. Serial No. 608,660. 1 Claim. (Cl. 74—39.)



A signal device for vehicles comprising a frame, a shaft, a gear segment fixed to the shaft, a signal arm fixed to the shaft, a second shaft mounted in the frame perpendicular to the first shaft, a gear segment secured to the second shaft adapted to engage the gear segment secured to the first shaft, a lever secured to the second shaft, a reciprocable operating member, a link connecting the operating member with the lever, and a guide for the operating member, said guide provided with an offset detent adjacent each end as and for the purposes specified.

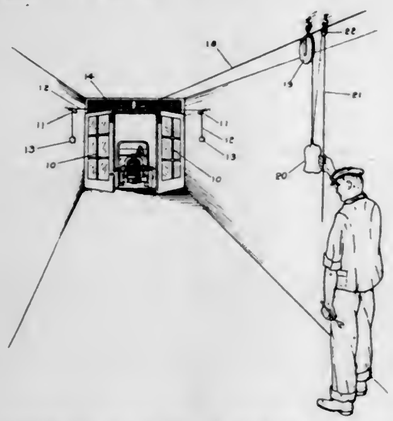
1,510,103. DINNER PAIL. ANDREW B. PERKINS, Colfax, La. Filed July 3, 1923. Serial No. 649,351. 4 Claims. (Cl. 206—4.)

1. In a dinner bucket, a casing, pairs of guideways formed in the casing, trays for carrying different articles of food adapted to be placed in the casing, and right angularly extending guide ribs formed on the trays for slidably fitting in said guides.



1,510,104. CREEPER. JOHN RAU, Belleville, Ill. Filed Feb. 16, 1923. Serial No. 619,438. 1 Claim. (Cl. 281—61.5.)

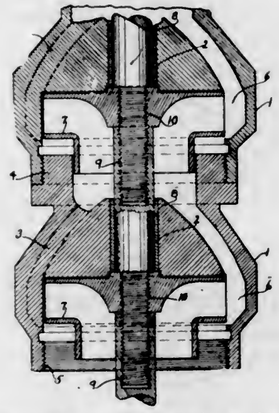
A creeper comprising a body portion formed of a plurality of members including outer members and a central member, hinge members having connection with one of the outer members and the inner member, adjacent to the upper edges thereof, hinge members for connecting the opposite outer member and inner member at points adjacent to the lower edges thereof, whereby the members may be folded one upon the other, transversely extending members supported at the ends of the body portion, said transversely extending members having pivotal connection with the body portion at one of their ends, said transversely extending members adapted to support the ends of the body portion, and rollers carried by the transversely extending members.



1,510,105. COMPRESSED-AIR FLUID LIFT. RAYMOND W. RICHMOND, Mexia, Tex., assignor of one-fourth to Charles L. Rowan, Houston, Tex.; one-fourth to William A. Sandberg and one-fourth to Franz O. Mjellem, both of Mexia, Tex. Filed Aug. 23, 1922. Serial No. 583,833. 12 Claims. (Cl. 103—233.)

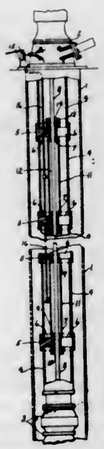
1. In a fluid lift mechanism of the character stated, the said mechanism including a discharge or lift pipe that delivers above the well casing, a tubular member that surrounds and is spaced apart from the discharge pipe and provides an air passage from the top of the well casing to direct the air below the discharge pipe, air ducts that establish communication between the lower end of the discharge pipe and the said upper end of the casing, back check valves between the air intake to the discharge pipe and the oil level, packer devices mounted above the aforesaid air tube, the said devices including an expansible body ring, a stationary ring that constitutes the bottom support for the expansible body ring and a top ring that engages the upper edge of the said expansible body ring and slidably engages the air tube, and a slidable member that constitutes a part of

the outfit which transfers the weight of the overhead portions onto the slidable ring of the packer devices when the lower end of the lift mechanism engages the bottom of the well to thereby expand the said packer body.



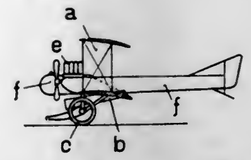
1,510,106. DOOR OPENER. JAMES LAWSON ROBB, Lincoln, Nebr. Filed May 14, 1923. Serial No. 638,980. 1 Claim. (Cl. 268—9.)

In combination with a pair of swinging garage doors, pulleys secured to the opposite walls of the garage adjacent the doors, a flexible element for each of the doors, said flexible element being secured to the door at a point adjacent the free edge thereof and then passing through its companion pulley, and carrying a weight at its lower free end, projecting lugs secured to the doors at their upper edges, a pair of pulleys secured to the door casing above the doors, a second flexible element passing through said pulleys and having its extremities secured each to one of said projecting lugs, a spreader block secured to said second flexible element at its middle point and between said pair of pulleys, an overhead pulley remote from the doors, a third flexible element passing through said last named pulley, one end thereof being secured to said second flexible element at its middle point and the other end being freely suspended and carrying a weight which



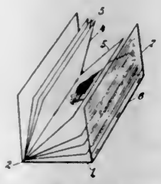
balances said first named weights, a pulley adjacent said last named pulley, and a fourth flexible element having one of its ends secured to said last named weight and thence passing through the pulley and having a freely suspended portion whereby the operator may lift said last named weight to permit said first named weights to open the doors.

1,510,107. PUMP ASSEMBLY. ABRAHAM RODRIGUEZ and HENRY GUSTAVSON, San Jose, Calif., assignors to Milton G. Moenning and Douglas C. Howard, both of San Jose, Calif. Filed Oct. 8, 1921. Serial No. 506,498. 1 Claim. (Cl. 103—102.)



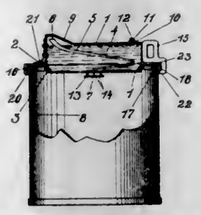
In a centrifugal pump, a shaft section internally threaded at one end to receive the threaded end of another shaft section and externally threaded at the other end to engage the internally threaded end of another shaft section, and an impeller internally threaded to engage said last mentioned externally threaded end of said shaft section, and mounted thereon prior to its engagement with another shaft section.

1,510,108. OILING SYSTEM FOR DEEP-WELL CENTRIFUGAL PUMPS. ABRAHAM RODRIGUEZ and HENRY GUSTAVSON, San Jose, Calif., assignors to Milton G. Moenning and Douglas C. Howard, both of San Jose, Calif. Filed Oct. 8, 1921. Serial No. 506,501. 1 Claim. (Cl. 103—102.)



In combination, a deepwell pump driving shaft, spaced bearings throughout the length thereof, each bearing being similarly threaded at both ends and provided with radially extending webs supporting a coupling similarly threaded at both ends to support a continuous discharge casing, shaft enclosing tubes connecting alternate pairs of bearings by threaded engagement therewith, a packing arranged on the disengaged end of each bearing, and means for filling said tubes with lubricant.

1,510,109. AIRCRAFT GUN. KARL RÖSNER, Prague, Czechoslovakia. Filed Sept. 3, 1921. Serial No. 498,430. 2 Claims. (Cl. 89—40.)

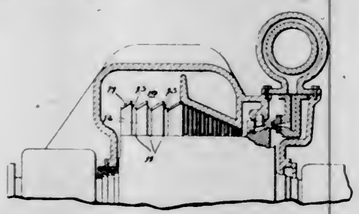


2. An aircraft comprising a hull, landing gear underneath and rigidly connected with said hull comprising wheels and a wheel axle and a field gun and field carriage mounted on said axle between said wheels.

1,510,110. GUIDE. HELLMUTH SCHMIDT, Oakland, Calif. Filed Dec. 14, 1921. Serial No. 522,309. 5 Claims. (Cl. 35—6.)

1. A city guide provided with a set of leaves, each leaf having printed thereon a skeleton map of the city in conjunction with guiding data for that particular leaf the said skeleton map being alike on each leaf, and said guide also provided with a hinged transparent transfer sheet adapted to be folded over any one of the said leaves for marking on said sheet any data desired to be transferred thereto from the leaf beneath.

1,510,111. AUTOMATICALLY-DISINFECTED MINE CLOSET. ALBERT SCHWESIG, Buer, Germany. Filed Dec. 7, 1920. Serial No. 429,039. 4 Claims. (Cl. 4—230.)

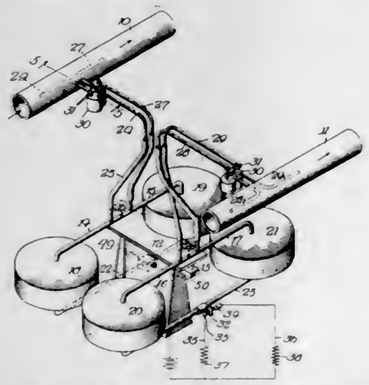


1. A mine-closet of the character described, consisting of a closet-tub, a seat mounted on said tub and adapted to be locked thereto, a reservoir-cover hinged to said seat and likewise adapted to be locked to said tub, a fibrous pad exchangeably secured upon the external face of said reservoir-cover and adapted to contact with said seat; a knee-shaped communication-tube arranged within said reservoir-cover to exclude the disinfectant from said tub when said reservoir-cover is closed, and until it is raised to its terminal open position, but to admit it to said tub while said reservoir-cover is being swung back into its closed position; a branch-tube projecting from said communication-tube and adapted to conduct a part of the disinfectant to said pad while said reservoir-cover is being closed, and means on said reservoir-cover for admitting air to the interior thereof, substantially as set forth.

1,510,112. BUMPER. SAMUEL H. SHAW, New York, N. Y. Filed Nov. 12, 1923. Serial No. 674,115. 6 Claims. (Cl. 293—55.)

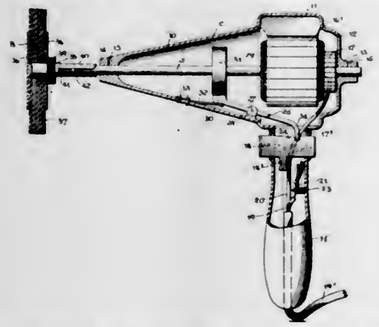
1. A bumper for vehicles comprising a pair of U-shaped impact units extending in opposite directions and having the arms of each overrunning those of the other, means for securing the units against separation from one another, and means for attaching the combined units to a vehicle, including a spring bar connected intermediate of its ends to the combined units and at its ends to the vehicle whereby the impact units will be supported transversely of the vehicle.

1,510,113. TURBINE BLADING. LOUIS N. THOMPSON, Moore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 22, 1922. Serial No. 583,580. 8 Claims. (Cl. 253—77.)



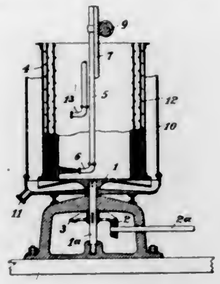
1. The combination with a row of turbine blades, of shrouding therefor comprising a plurality of adjoining sections each of which includes portions arranged parallel and transversely respectively to the blade tips so as to constitute shrouding which is highly resistive to bending stresses.

1,510,114. APPARATUS FOR THE OBJECTIVE DETERMINATION OF THE REFRACTION OF THE EYE. WALTHER THORNER, Berlin, Germany. Filed Aug. 8, 1921. Serial No. 490,719. 3 Claims. (Cl. 88—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



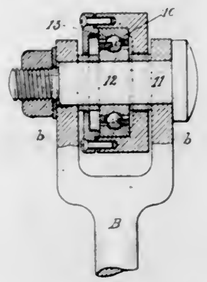
1. In an apparatus for the objective determination of the refraction of the eye on an illuminating tube of an ophthalmoscope, the said tube consisting of a stationary part containing a collective lens system and a part displaceable in the optical axis, this latter part containing a source of light displaceable in the optical axis of the said tube, a diaphragm and a second collective lens system, the diaphragm lying in the focal plane of the second collective system, and the source of light lying at a distance from the second collective system, greater than the focal length of this system.

1,510,115. VOLUME GOVERNOR FOR GAS MAINS. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1918. Serial No. 264,879. 10 Claims. (Cl. 137—78.)



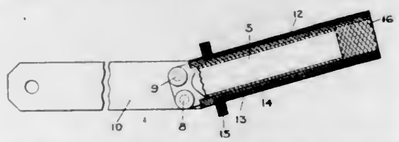
1. In a volume governor for gas ducts, in combination: a pair of ducts for the flow of gas; a liquid balance, and connections for transmitting to reversely opposite sides thereof the velocity head and the static head of the gas flow in the respective ducts, whereby unequal flow in said ducts will tip the balance and equalized flow restore it; and controlling means operated by the swing of the balance, for limiting the flow in one or the other of said ducts according to the inequality between them.

1,510,116. POLISHING OR BUFFING DEVICE. ARTHUR LEE VAN METER, New Orleans, La. Filed Apr. 17, 1922. Serial No. 553,345. 7 Claims. (Cl. 192—2.)



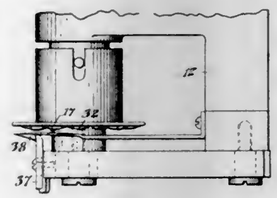
1. A device of the character described, comprising a casing, a motor therein having a shaft extending therefrom and through the casing, a lever mounted upon the inner wall of said casing, a collar carried by said shaft adapted to be engaged by the one end of said lever, a handle for said casing, and means carried by said handle adapted to be manipulated for causing the lever to engage or disengage said collar upon the shaft for the purpose described.

1,510,117. MOLDING HOLLOW BODIES. JOSEF VON VASS, Kotzschenbroda, Germany. Filed July 27, 1920. Serial No. 399,435. 14 Claims. (Cl. 25—30.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



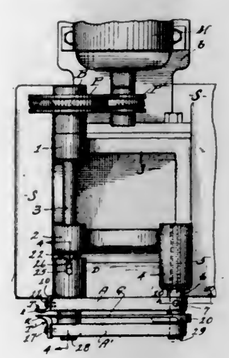
1. The method of making hollow bodies from plastic material, such as for instance concrete, comprising spraying a plastic mixture containing such material onto the inner wall of a mould rotating at comparatively high speed.

1,510,118. BEARING FOR OSCILLATORY MOTION. CARL GUSTAF VON POST, Gottenborg, Sweden; Anna von Post, administratrix of said Carl Gustaf von Post, deceased, assignor to Aktiebolaget Original-Odhner, Gottenborg, Sweden, a Corporation of Sweden. Filed July 2, 1921. Serial No. 482,251. 7 Claims. (Cl. 64—59.)



1. In an anti-friction bearing, the combination with an inner and an outer ring and a series of rolling elements between the said rings, of separators for the said rolling elements, fast with the respective rings.

1,510,119. SWITCH HANDLE. NILS J. A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 6, 1921. Serial No. 435,317. 4 Claims. (Cl. 200—172.)

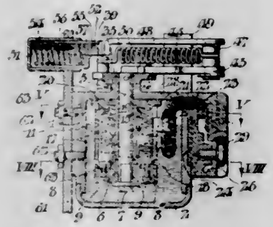


3. A handle for electrical apparatus comprising a metal body member provided with means adjacent to its inner end for attachment to the apparatus and having a stop shoulder adjacent said means, an insulating sleeve surrounding the metal body member and abutting the stop shoulder and having an enlarged portion adjacent its inner end, the said sleeve extending beyond the end of the body member, an insulating barrier disc mounted on the said sleeve and abutting the said enlarged portion thereof, a second insulating sleeve surrounding the first sleeve for retaining the barrier disc in position, and an insulating closure for the outer end of the first insulating sleeve.

1,510,120. SOLE AND STITCH REMOVING MACHINE. PAUL A. WARD, Los Angeles, Calif. Filed Aug. 6, 1923. Serial No. 655,990. 16 Claims. (Cl. 12—17.)

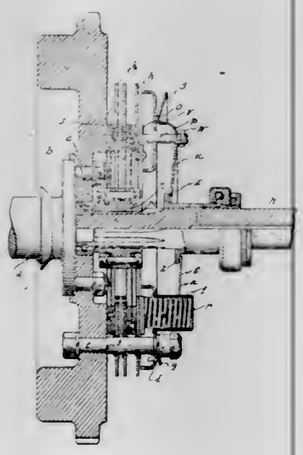
8. A machine for the purpose set forth comprising an oscillatory cutter element for severing the stitching between a welt and a sole, a rotatable thread removing element operating against that face of the welt opposite that face to which is secured the sole for removing the severed stitching, a common driving means for said elements for simultaneously operating them, and a guard member arranged in operative relation with respect to said cutter element for protecting the welt during the severing of the stitching by said cutter element, said stitch removing element including a series of tangentially disposed slots having projecting from one edge thereof a semi-oval shaped rib.

1,510,121. SOLE AND STITCH REMOVING MACHINE. PAUL A. WARD, Los Angeles, Calif. Filed Dec. 12, 1923. Serial No. 680,124. 11 Claims. (Cl. 12—17.)



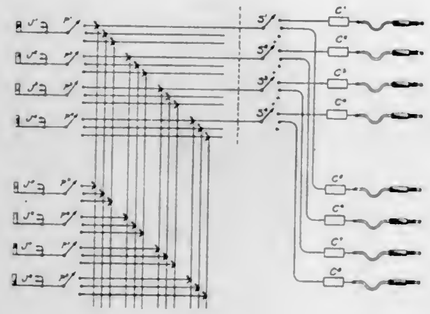
2. A machine of the character described comprising a cutting element for severing the stitches connecting a welt with a sole, a stitch removing element for engagement with the welt for removing the severed stitches, and means for operating said elements in opposite directions.

1,510,122. ELECTRIC SWITCH. HERBERT I. WASHBURN, Magnolia, N. J. Filed Apr. 9, 1921. Serial No. 459,847. 11 Claims. (Cl. 200—150.)



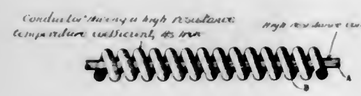
1. An electric switch comprising in combination, a closed, dust and moisture-proof, protective casing into

which the leads of the conductors of the circuits to be controlled, are passed through a sealed opening; a rotatable shaft extending to the interior of the casing; a movable, contact carrying switch member attached to the shaft within the casing; a fixed block of insulating material wholly contained within the casing adjacent said movable switch member; non-rotatable me-



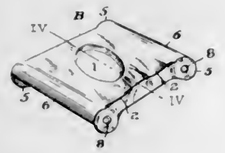
tallic plungers slidably disposed in retaining apertures of said block, said plungers being electrically connected with the conductor leads of the controlled circuits; means for yieldingly maintaining said plungers in engagement with the contacts of the aforesaid movable switch member, and means capable of transportation to angular positions at opposite sides of the rotatable shaft for limiting movement of the switch.

1,510,123. CLUTCH. ERNEST E. WEMP, Detroit, Mich. Filed Aug. 15, 1921. Serial No. 492,276. 6 Claims. (Cl. 192—69.)



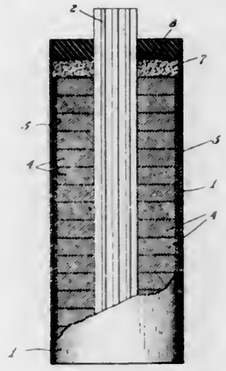
1. In a clutch, the combination of a driving member, a driven member, driving and driven disks connected with the driving member and the driven member respectively, a fixed ring bolted to and spaced in open relation from the driving member, a thrusting ring, a plurality of coiled sprigs thrusting toward the driving member to pack the discs and located between the fixed ring and the thrusting ring, and a plurality of levers fulcrumed on the back of the fixed ring and connected with the thrusting ring for releasing the pressure on the disks when desired, by pulling the thrusting ring away from the driving member.

1,510,124. MULTIOFFICE TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1919. Serial No. 338,380. 5 Claims. (Cl. 179—27.)



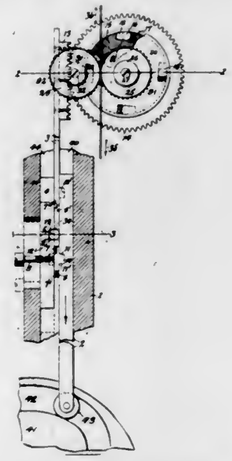
3. In a telephone system, an A board divided into sections, each comprising a plurality of positions, a separate outgoing trunk multiple for each section, a separate group of trunking switches for each multiple, and a plurality of inter-office trunk lines accessible to all of said switches in common.

1,510,125. REGULATING CONDUCTOR FOR ELECTRIC HEATERS. WATSON H. WOODFORD, Bridgeport, Conn. Filed Aug. 11, 1920, Serial No. 402,756. Renewed Jan. 23, 1924. 8 Claims. (Cl. 219—76.)



1. A heating conductor for electric heaters comprising a high resistance conductor having a low resistance temperature coefficient and a conductor in parallel therewith having a high positive resistance temperature coefficient.

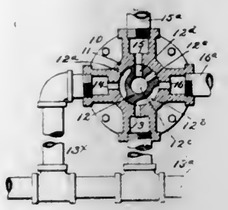
1,510,126. SANITARY WATER-CLOSET SEAT. HERBERT F. YEAKEL, Pittsburgh, Pa. Filed Dec. 28, 1922. Serial No. 609,412. 3 Claims. (Cl. 4—247.)



1. A roller mounting for use in connection with sanitary water-closets and other purposes which consists of a pair of spaced apart supports provided with bearing holes, tubular rollers positioned between said supports in axial alinement with said holes, and journal members removably inserted from without into said bearing holes, said members being provided at their inner ends with expansible gripping fingers which are inserted into the ends of the rollers to detachably hold them in place.

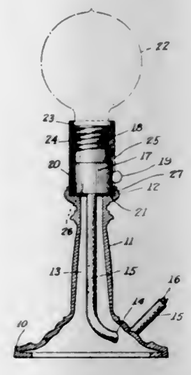
1,510,127. DRY CELL. VICTOR YNGVE, South Orange, N. J., assignor to Manhattan Electrical Supply Company, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Nov. 14, 1923. Serial No. 674,610. 3 Claims. (Cl. 204—38.)

3. In a dry cell, a plurality of tablets compacted of depolarizing mixture, fluted apertures through said tablets, and a correspondingly fluted carbon electrode having a diameter larger than said apertures cooperating therewith.



1,510,128. MOTION TRANSMITTING MECHANISM. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to The J. L. Morrison Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 16, 1922. Serial No. 594,894. 9 Claims. (Cl. 74—14.)

1. A motion transmitting mechanism comprising a reciprocating driven member, a reciprocating driving member, a normally stationary holding member, and a coupling member mounted on said driven member and adapted to be shifted for coupling said driven member either with said driving member or with said holding member.



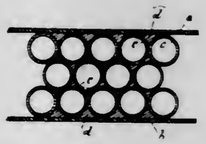
1,510,129. VALVE MECHANISM. WILLIAM P. ARGY, Turners Falls, Mass., assignor to International Paper Company, a Corporation of New York. Filed Mar. 17, 1921. Serial No. 453,073. 5 Claims. (Cl. 251—104.)

1. A valve mechanism comprising a valve casing provided between its ends with a plurality of side ports, and provided in its end with an exhaust port, and a valve oscillatable in the casing and provided with two side ports, adapted in the different positions of the valve, to cooperate with certain of the side ports of the casing, and provided also with an axially extending exhaust port leading from a point between the ends

of the valve outwardly through the end thereof and communicating constantly with the exhaust port of the casing, said axially extending port adapted, in the different positions of the valve, to connect at its inner end alternately with certain of said side ports of the casing.

1,510,130. ELECTRIC-LAMP STAND. ALEXANDER ARONSON, Newark, N. J. Filed Oct. 11, 1922. Serial No. 593,663. 1 Claim. (Cl. 240—81.)

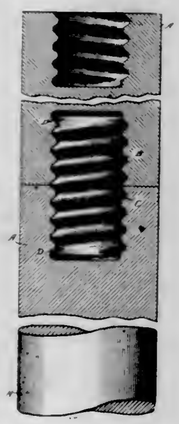
A lamp stand comprising a hollow base and column, a seat on said column open to the space therein, an integral ring encircling said seat, a lamp socket on said seat, an insulating washer therebetween, an insulating sleeve surrounding the upper part of said socket, a cylindrical casing circumjacent said sleeve and socket, said casing tightly fitting said ring to be supported thereby and obscure the joint, said casing being slit at its lower end and having a slot through which the key of said socket extends, a lug integral with said seat engaging the lower end of the slot, and an electric conductor passing through an opening in said base engaging said socket.



1,510,131. PROCESS OF MAKING DECOLORIZING CARBONS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed May 7, 1919. Serial No. 295,470. Renewed Aug. 20, 1924. 3 Claims. (Cl. 252—3.)

1. The method of obtaining a decolorizing carbon which consists in evaporating molasses distillery waste to about 25° to 30° Bé, adding thereto an absorptive material in sufficient quantity to prevent foaming in the retort, heating in the retort to about 750° C., and introducing steam before and near the end of the operation to remove volatile materials.

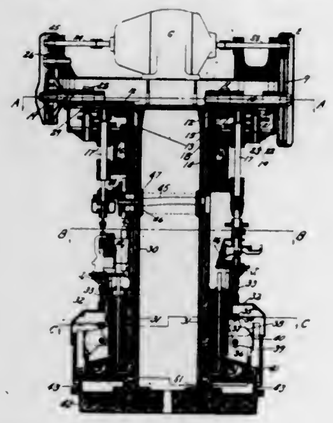
1,510,132. PROCESS OF PRODUCING NITROGEN TRICHLORIDE. JOHN C. BAKER, Nutley, N. J., assignor to Wallace & Tiernan Co., Inc., Belleville, N. J., a Corporation of New York. Filed Apr. 21, 1924. Serial No. 708,061. 3 Claims. (Cl. 23—10.)



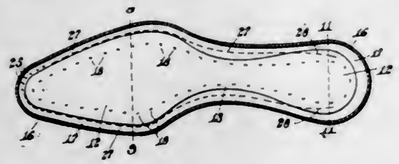
1. The process herein described for producing nitrogen trichloride in gaseous form suitable for the bleaching of flour, which consists in bringing in reactive relation in a solution chlorine and an ammonium compound, allowing such solution to stand until the reaction is complete, and then removing from said solution the nitrogen trichloride by a current of air.

1,510,133. PROTECTING DEVICE FOR FUEL TANKS. LOUIS BREGUET, Paris, France, assignor to Societe Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France. Filed Oct. 26, 1922. Serial No. 597,227. 2 Claims. (Cl. 154—46.)

2. A protecting device for tanks, particularly tanks containing an inflammable liquid, comprising a covering of expansible material constituted by a plurality of balls containing a fluid under pressure and embedded in rubber.



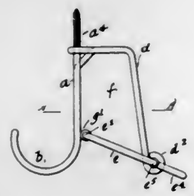
1,510,134. ELECTRODE FOR ELECTROMETALLURGICAL FURNACES. BARTLEY E. BROADWELL, Niagara Falls, N. Y., assignor to Republic Carbon Company, Inc., Niagara Falls, N. Y., a Corporation of Delaware. Filed Oct. 19, 1922. Serial No. 595,621. 3 Claims. (Cl. 204—65.)



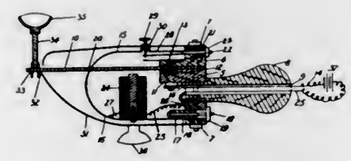
3. A nipple for uniting the abutting ends of carbonaceous electrodes for electric furnaces, formed of carbonaceous material of cylindrical form with its intermediate portion provided with an external thread of uniform pitch and with end portions free from screw threads and of frusto-conical form less in diameter than the threaded portion.

1,510,135. MACHINE TOOL. JOHN WILSON BROWN, Jr., Philadelphia, Pa. Filed May 7, 1923. Serial No. 637,180. 12 Claims. (Cl. 29—38.)

1. A series of tables revolving about an axis, a tool opposed to each table, said tools being adapted to perform successive operations on the same article, the tools being so arranged that the tool for the succeeding operation precedes in the path of revolution the tool for the preceding operation and means for revolving the tools about said axis in synchronism with the tables.

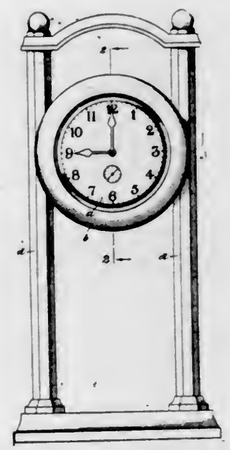


1,510,136. SHOE AND METHOD OF MAKING SAME. JOHN M. CONNELL and FRANK E. GRAVES, Braintree, Mass. Filed Aug. 15, 1922. Serial No. 581,959. 5 Claims. (Cl. 12—142.)



1. The method of making shoes which consists in placing upon a last an insole having a very narrow shank portion; drawing the edges of the upper over said insole and permanently securing said edges to said insole: positioning an outsole on the inturned edges of the upper and tacking said outsole to said edges and insole at the toe and heel only, said outsole extending at the shank beyond the narrow shank portion of the insole, a distance greatly in excess of that which said outsole extends beyond said edge at the forepart and heel portion; then removing said last; and finally uniting said edges of the upper to said outsole by a row of stitches.

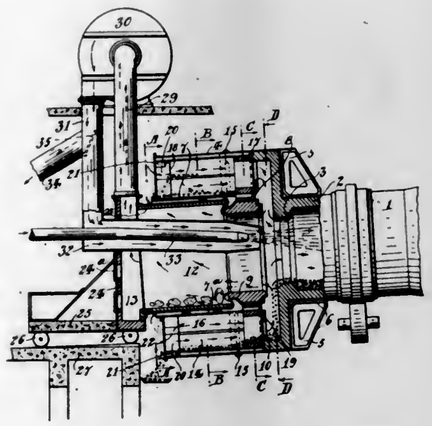
1,510,137. FRICTION-GRIP SUSPENDER. DUNCAN CROCKETT, Mansfield, Victoria, Australia. Filed Dec. 26, 1923. Serial No. 682,795. 3 Claims. (Cl. 24—248.)



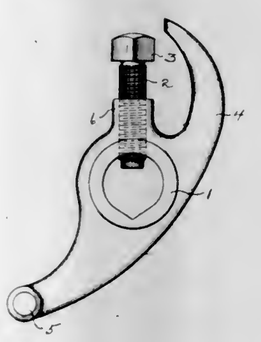
1. A supporting device of the character described, comprising a stem provided with a screw shank, an angular projection secured to said stem and having its free end provided with an eye and projecting beyond the free end of said stem, and a gripping member pivoted in said eye and comprising a substantially continuous loop, one portion thereof being disposed transversely of the free end of the said stem and adapted to swing about the pivot towards the said stem to grip material arranged therebetween.

1,510,138. ELECTRIC VIBRATOR. GEORGE DE CAIROS-REGO, Sydney, New South Wales, Australia. Filed Apr. 27, 1921. Serial No. 646,939. 6 Claims. (Cl. 128—55.)

1. An electric vibrator, comprising an electromagnet, contact devices for closing an electric circuit through said magnet, a vibratory armature in the field of the magnet, and means for imparting to the magnet a vibratory movement relative to said armature when current passes through the magnet.



1,510,139. TIME-INDICATING MECHANISM. ARTHUR DORSEY, Hartford, Conn. Filed Feb. 23, 1922, Serial No. 538,815. Renewed Mar. 21, 1924. 8 Claims. (Cl. 58—2.)

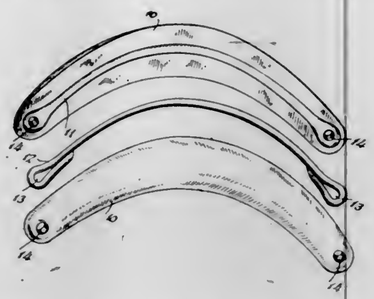


2. A time indicating mechanism including a falling clock work actuated by gravity, a plurality of racks to support the falling mass, and pinions engaging the respective racks and operatively interconnected with one another and with the clock work.

1,510,140. ROTARY KILN AND COOLER. JOHAN S. FASTING, Valby, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Sept. 8, 1923. Serial No. 661,621. 10 Claims. (Cl. 222—7.)

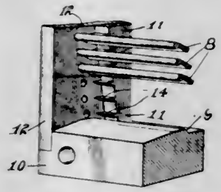
1. The combination with a rotary kiln, of a circumferential cooler connected to the kiln to rotate therewith, extended beyond the outlet of the kiln, spaced longitudinally from the kiln at its inner end, open at its outer end to admit air and to discharge cooled clinker and at its inner end to communicate with the space between itself and the end of the kiln and to receive hot clinker therefrom, and surrounding a central chamber substantially coaxial with the kiln.

1,510,141. LATHE DOG. THOMAS FISH, Bridgeport, Conn. Filed Apr. 6, 1922. Serial No. 550,008. 1 Claim. (Cl. 82—41.)



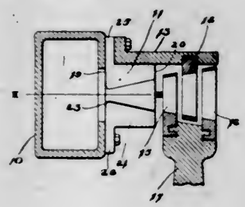
A lathe dog having a ring portion provided with a set screw, said ring portion being associated with a bar-like member extending symmetrically on both sides of said ring portion, one part of said bar-like member projecting above the set screw and the head thereof and serving to laterally guard the same, the other part of said bar-like member having the stem of the said dog connected thereto, the said stem and the said screw being on opposite sides of the central portion of the said ring.

1,510,142. HANDLE AND METHOD OF MAKING SAME. MORRIS JACOB GOLDMAN, Staten Island, N. Y. Filed Jan. 10, 1923. Serial No. 611,700. 8 Claims. (Cl. 190—57.)



1. A handle of the type set forth comprising a filling consisting of a pair of similar substantially solid halves

constructed of fibrous material, the inner faces of said halves being provided with a groove, a metal reinforcing



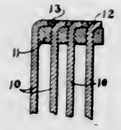
rod received in said groove and encased by said halves, said halves being secured together by a suitable adhesive to form a compact substantially solid structure.

1,510,143. PUMP-VALVE MECHANISM. ARTHUR S. HAWKS, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 30, 1918. Serial No. 256,295. 10 Claims. (Cl. 251—123.)

1. Pump valve mechanism comprising an organization of imbricated, pivoted louvers mutually cooperating as multiple valve members and end seats for the pivoted louvers.

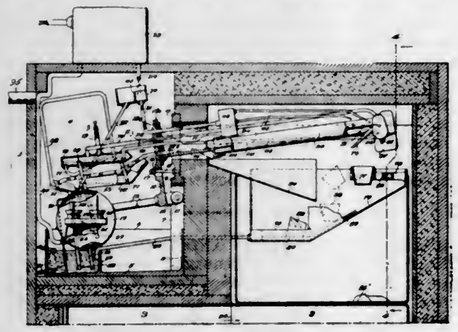
1,510,144. NOZZLE BLOCK. HERBERT T. HERR, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 13, 1922. Serial No. 588,054. 4 Claims. (Cl. 253—78.)

1. The combination with a nozzle box, of a sectional nozzle block structure comprising pairs of abutting members having complemental grooves or passages on adjoining faces constituting nozzle passages, said adjoining members being secured directly to the nozzle box.



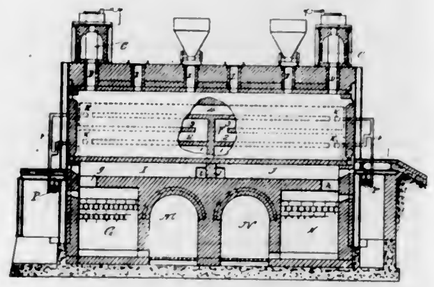
1,510,145. HEAD-PROTECTING ATTACHMENT FOR RAINCOATS. ALEXANDER HUSON, Perth Amboy, N. J. Filed Feb. 24, 1922. Serial No. 538,905. 1 Claim. (Cl. 2—202.)

A head protector adapted to be applied to a body garment comprising a globular portion of flexible material adapted to receive the head of the wearer and a flaring neck portion adapted to receive the neck of the wearer, means for detachably connecting the neck portion with the body garment, the globular head portion being provided with openings adapted to register with the ears, eyes, nose and mouth of the wearer, relatively rigid frames applied to the head portion and surrounding the ear, eye and nose openings thereof, imperforate transparencies mounted in the frames which



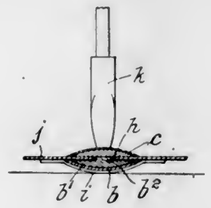
register with the eye openings, perforated disks mounted in the frames which register with the ear and nose openings, the axes of the openings in the said disk being disposed at acute angles to the frames of the disk, and a flap of flexible material secured to the head portion above the mouth opening, and means for releasably securing said flap in an open position with relation to the mouth opening, and means for securing said flap in a closed position over the mouth opening.

1,510,146. BLADE-FASTENING MEANS. JOSIAH P. JOHNSON, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 3, 1921. Serial No. 474,826. 2 Claims. (Cl. 253—77.)



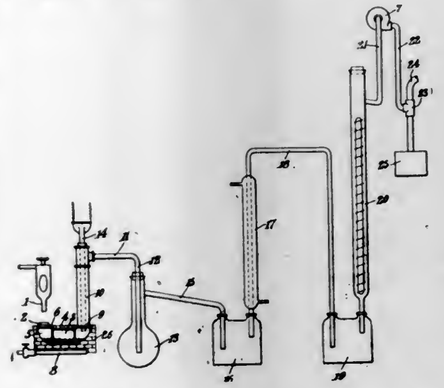
1. A blading unit for insertion in a turbine comprising a plurality of individual blades assembled in substantially parallel relationship, each blade being bent laterally at its foot, and means for integrally uniting said blades.

1,510,147. REFRIGERATING APPARATUS. DAVID FORBES KEITH, Toronto, Ontario, Canada. Filed Apr. 12, 1923. Serial No. 631,527. 49 Claims. (Cl. 62—5.)



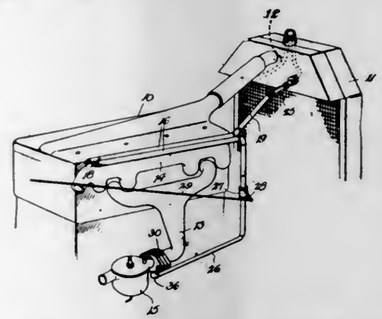
1. In a rocking refrigeration apparatus, the combination of two juxtaposed open-top receptacles carried thereby to rock to and fro between two extreme positions, delivery-pipes for leading a cooling-liquid from said receptacles respectively to different portions of the apparatus, a supply-pipe for normally supplying such cooling-liquid selectively to one or the other of said receptacles according to the position thereof, and means whereby so long as the liquid-pressure in said supply-pipe is below a predetermined minimum the cooling-liquid will be prevented from reaching a certain one of the receptacles yet will be free to reach the other regardless of the position occupied by said receptacles.

1,510,148. COKE OVEN. EUGENE W. KING, Syracuse, N. Y., assignor to Semet-Solvay Company, Solvay, N. Y., a Corporation of New York. Filed Dec. 29, 1921. Serial No. 525,569. 5 Claims. (Cl. 202—9.)



1. In a block of retort coke ovens, separated one from another by dividing walls, the combination of two sets of horizontally disposed heating flues, connected in series, on each side of each oven, vertical gas passages located within the dividing walls and arranged to deliver gas from the ovens directly to one end of the heating flues of each set and regenerators located below and parallel with each oven and arranged to deliver heated air alternately to the bottom flues of said sets of heating flues.

1,510,149. MEANS FOR REPAIRING LEAKS IN METAL UTENSILS. GEORGE HENRY KING, London, England. Filed Apr. 9, 1920. Serial No. 372,506. 3 Claims. (Cl. 113—111.)



2. Devices for repairing leakages in metal utensils, comprising a pair of dished metal caps adapted to be applied to opposite sides of a metal utensil, so as to cover the leakage therein, each of said caps being filled with solder, and at least one of said caps having a projection thereon adapted to enter the leakage in the utensil.

1,510,150. PRODUCTION OF OXIDIZED CARBON COMPOUNDS. RUETHERFORD B. MARTIN, New York, N. Y., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed June 3, 1921. Serial No. 474,810. 8 Claims. (Cl. 252—1.)

1. The process which consists in carrying the vapor of a carbon compound together with oxygen in a confined space across heated carbonaceous material to produce substances condensable to an oily liquid largely absorbable by concentrated sulphuric acid.

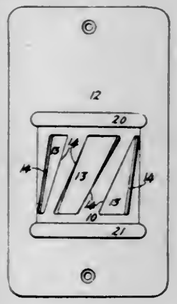
1,510,151. DILUTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. LAWRENCE CLYDE MOORE, Piqua, Ohio, assignor of one-half to John Henry Moore, Lima, Ohio. Filed Feb. 2, 1922. Serial No. 533,550. 1 Claim. (Cl. 123—25.)

In a diluting device for internal combustion engines, a rigid superheater unit including spaced superheater pipes to extend along the exhaust manifold of the engine resting on said manifold to be supported throughout their length thereby, a cross pipe connecting the superheater pipes near corresponding ends thereof, removable plugs closing the superheater pipes at said ends thereof, a combined air and moisture supply pipe for connecting the opposite end of one of said superheater pipes with a radiator, a distributer for interposition between the engine carbureter and intake manifold forming a connection between the outlet of the carbureter and the intake of the manifold, and an outlet pipe connecting the opposite end of the other of said superheater pipes with said distributer.

1,510,152. CORSET SUSPENDERS. EDITH A. MORGAN, Chester, England. Filed Jan. 17, 1923. Serial No. 613,265. 2 Claims. (Cl. 241—1.)

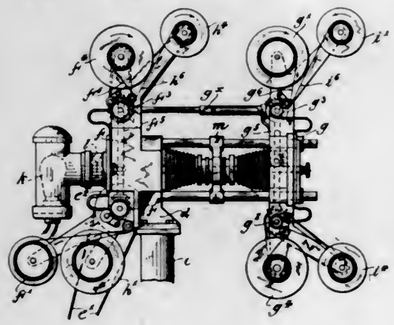
1. In combination, a body encircling garment; a loose-fitting knee-band; and suspending straps connected at

their upper ends to the rear half of the body garment and at their lower ends to only the rear portion of the knee-band, so as to cause the knee-band, when in use,



to be pulled up at the back away from the wearer's limb and tighten the front of the knee-band against the limb below the knee-cap.

1,510,153. VALVE FOR DRILLING ENGINES. HARRY S. MYERS, Rockland Township, Venango County, Pa. Filed July 13, 1920. Serial No. 395,954. 2 Claims. (Cl. 137—139.)



1. In a valve actuator, a two part rod, one end of one part being non-revolubly connected to a valve lever, and the opposite end of the other part carrying a member by means of which that part is rotated, and means for connecting the two rod parts whereby a relatively large angular movement of the one part will produce a relatively short longitudinal movement of the other, said means comprising a spirally grooved end on one part working in a sleeve upon the other part which carries a fixed lug working in said grooved rod end.

1,510,154. MATCH SAFE. JACOB E. NEAHR, Hartsdale, N. Y. Filed Apr. 26, 1922. Serial No. 556,686. 7 Claims. (Cl. 206—30.)

1. A match-safe comprising a wall board or bracket, a shell or pocket thereon provided with a lining of match-striking fabric, said shell having in its front an aperture for the insertion of the match tip to strike it against the fabric, and an interior box or shell inserted within the fabric to retain the same and afford a backing for the fabric at the match-striking operation, one of said box and safe elements having a floor for the support of the matches deposited therein, said box or retainer having a rear side which is split from top to bottom to enable the box to be sprung into the match-safe or shell.

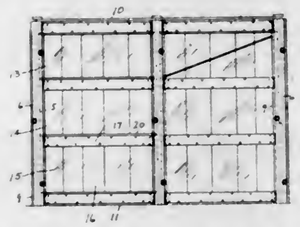
1,510,155. APPARATUS FOR PRINTING MOVING-PICTURE FILMS. ERIK WILLIAM NELSON, New Rochelle, N. Y. Filed Apr. 11, 1921. Serial No. 460,333. 1 Claim. (Cl. 88—24.)

An apparatus for preparing composite motion picture films, the same comprising means to support and feed a negative film, means to support and feed a second negative film, means to support and feed a positive film adjacent to the second negative film, a lens interposed between the first and second negative films, mechanical connections between the film feeding devices whereby all are operated in synchronism, and a source of light external to both of the negative films whereby the images on both negative films are printed on the positive film.

1,510,156. DISCHARGE PIPE FOR TURBINE PUMPS. WALTER G. NOACK, Stockton, Calif. Filed Mar. 23, 1923. Serial No. 627,181. 4 Claims. (Cl. 103—102.)

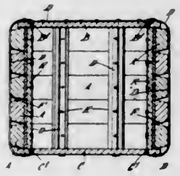
1. In a discharge pipe for water pumps, continuous spiral grooves formed therein; the depth of said grooves being sufficient to impart a whirling motion to a column of water being pumped through the pipe but insufficient to retard the flow of the water.

1,510,157. APPARATUS FOR CLEANING AUTOMOBILE CYLINDERS. UZ C. PEMBERTON, Seffner, Fla. Filed June 29, 1921. Serial No. 481,320. 2 Claims. (Cl. 15—104.01.)



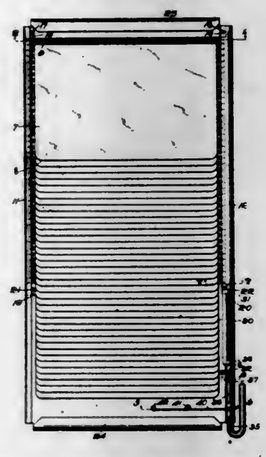
1. Apparatus for removing the carbon deposits from the cylinders and combustion chambers of internal combustion engines, comprising a rotary brush adapted to be inserted through the spark plug openings, a flexible driving shaft connected to said brush, and a rigid tubular casing surrounding the brush supporting portion of said

shaft, and slidable telescopically over said shaft so that it may be moved over or away from the rear end of the



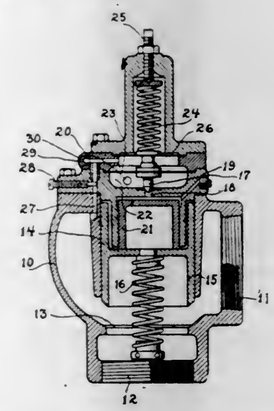
brush, said rigid casing being curved or bent laterally, whereby the brush may be guided and directed against the walls of the cylinders.

1,510,158. WALL FORM. FRANK A. POOLE, Cleveland, Ohio. Filed Jan. 19, 1922. Serial No. 530,349. 3 Claims. (Cl. 25—131.)



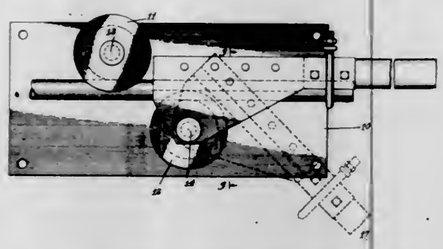
1. In a wall form, the combination of spaced parallel I-beams, mounted in vertical positions, means connecting said beams to maintain them in such relation, panel removably mounted between said I-beams, said panels having extending lugs engaging against the inner surface of one of the flanges on said beams, and braces extending between said beams, said braces engaging between the flanges of said beams and resting on said lugs on said panels.

1,510,159. MEANS FOR PACKING TIRES AND OTHER ARTICLES FOR TRANSPORT. GEORGE FREDERICK CHARLES POWELL, Birmingham, England, assignor to The Dunlop Rubber Company, Limited, Regents Park, London, England, a British Company. Filed July 14, 1921. Serial No. 484,684. 6 Claims. (Cl. 206—46.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



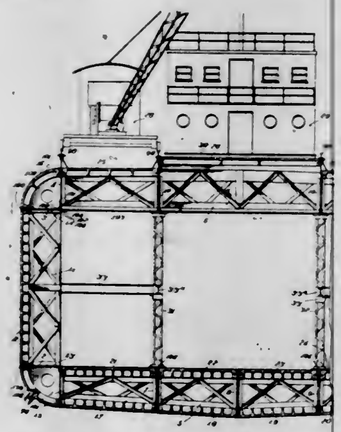
1. A package comprising a stack or pile of tires or wheel rims, end closing discs having slits through the thickness of said discs, metal securing strips extending and bent through said slits and positive means for securing said strips to retain said discs closely against the ends of the pile of tires or rims, so as to completely close the space surrounded by the tires or rims which space is packed with small articles, such as tire repair outfits, inner tubes and the like.

1,510,160. FILING AND INDEXING EQUIPMENT. JOHN T. QUIGLEY, Fresno, Calif., assignor to Costmeter Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1918, Serial No. 260,846. Renewed Feb. 13, 1924. 10 Claims. (Cl. 129—16.)



1. An equipment of the class described comprising in combination, a plurality of sheets, a plurality of sheet-holders, a sheet-holder mounting, sheet-holder locking means including a pivoted locking-bar, and a key cooperating with said locking-bar.

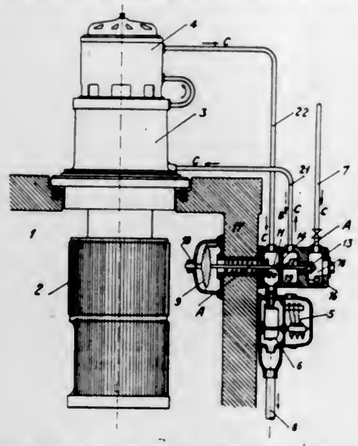
1,510,161. REGULATOR FOR COMPRESSORS. WARD RAYMOND, Easton, Pa., assignor to Pennsylvania Pump & Compressor Company, Easton, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1923. Serial No. 622,218. 2 Claims. (Cl. 230—24.)



1. A regulator for compressors comprising in combination, a body member, a valve therein adapted to open and close the inlet to a compressor cylinder, means normally holding said valve in its open position, pressure operated means comprising a pilot valve opened and closed by movement of the diaphragm to close said inlet valve, a conduit extending from the body member of the regulator to a point within a pressure tight cavity in rear of said diaphragm and provided with a leak port, and screw threaded means to vary the flow of fluid through said conduit, whereby the variations in pressure within said cavity may be controlled to increase or decrease its effect upon the movements of the pilot valve.

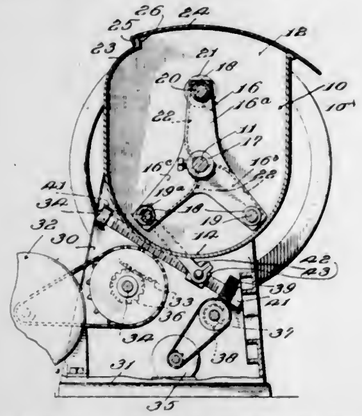
1,510,162. PIPE-BENDING MACHINE. EDWARD ROBINSON, Roselle Park, N. J., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed May 12, 1921. Serial No. 468,920. 2 Claims. (Cl. 153—40.)

1. A pipe bending machine comprising a rotatably mounted bending roller having a peripheral groove therein, a pair of spaced plates pivotally mounted coaxially with and on opposite sides of the bending roller, a bending block secured between the spaced plates and spaced from the bending roller, means for securing one end of a pipe to be bent to the bending block between the block and the bending roller, a movable guide spaced from the bending block and bending roller for guiding the unsecured end of the pipe, and means secured between said plates for manually bending the pipe around the bending roller.



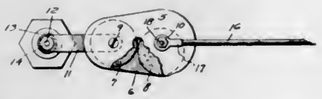
1,510,163. REENFORCED CONCRETE AND STEEL CONSTRUCTION. ROY H. ROBINSON, Chicago, Ill. Filed Oct. 10, 1919. Serial No. 329,834. 34 Claims. (Cl. 114—65.)

1. A vessel, the deck of which includes as framing members four longitudinal girder members extending through and above the deck, and cargo hatches interposed between the two inner girders, trimming tanks being provided outside of the outer girders and constituting the corners of the vessel.



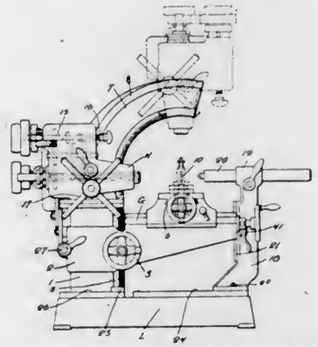
1,510,164. REFRIGERATING INSTALLATION. EDUARD RÜEGGER, Zurich, Switzerland, assignor to Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed May 14, 1923. Serial No. 638,892. 6 Claims. (Cl. 62—4.)

1. In a refrigerating plant, the combination with a cooling chamber, a refrigerating machine having a condenser cooled by flowing water and an evaporator in said cooling chamber; of means in said cooling chamber influenced by temperature changes, and two cut-off members operated by said means, one of which controls the admission of cooling water to the condenser and the other of which controls a passage permitting the cooling water



contained in the refrigerating machine to drain off when the admission of cooling water is prevented by the first mentioned cut off member.

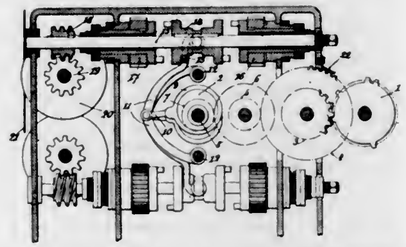
1,510,165. MIXING APPARATUS. ROBERT M. TEMPLE, Philadelphia, Pa. Filed Feb. 15, 1924. Serial No. 692,981. 16 Claims. (Cl. 259—109.)



1. In a mixer of the character described a rotatably mounted actuator having beater means for imparting alternate reciprocating movement to the mixable materials, and also having means independent of the beater means for applying a flattening pressure to said materials in a plane parallel with the axis of the actuator.

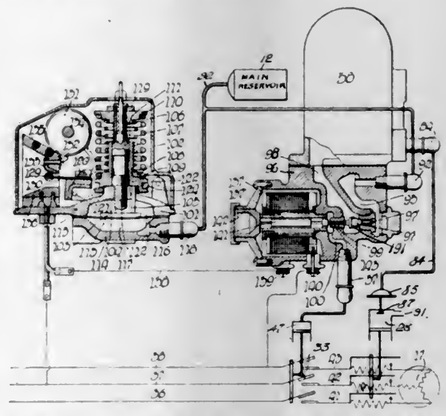
1,510,166. SPARK INTENSIFIER. MONROE VAN LEUVEN, Redlands, Calif. Filed Apr. 1, 1922. Serial No. 548,760. 1 Claim. (Cl. 173—183.)

A device of the character described comprising a pair of spaced plates of insulating material, a pair of carbon discs there-between, metallic elements traversing the discs and the plates and binding them together, one of said discs being eccentrically mounted upon its metallic element, means for attaching an electric wire to one of said metallic elements and a metallic strap mounted upon the other of said metallic elements, and being provided with means for binding it against movement thereon, said strap being adapted to engage the central terminal of a spark plug and being of such length as to permit movement of the carbon disc to the metallic element of which the electric wire is attached to a point sufficiently near the spark plug to create a secondary gap at that point.



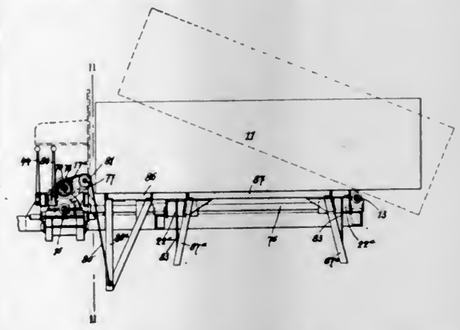
1,510,167. UNIVERSAL MACHINE. JOHN H. WILHELM, New York, N. Y., assignor, by mesne assignments, to Triplex Machine Tool Corporation, New York, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,603. 15 Claims. (Cl. 29—27.)

1. A universal machine comprising a lathe bed, a tool holder and a lathe center spaced apart longitudinally of the lathe bed and spaced above the upper surface of said bed, a column at the upper end of which said tool holder is mounted, means whereby the lathe bed is vertically adjustable longitudinally of said column, a standard at the upper end of which said center is mounted, and said lathe bed having sliding engagement with said standard to steady said lathe bed.



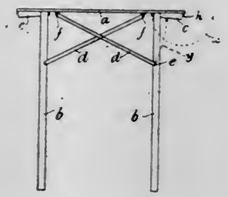
9. A universal machine comprising a lathe bed, a tool holder and a segmental standard to which said tool holder is connected and along which the tool holder may be slid from a horizontal position at one end of said lathe bed to a position vertically above the lathe bed, variable counter-balancing means for counter-balancing the weight of said tool holder as said tool holder moves between its horizontal and its vertical positions, said counter-balancing means comprising a plurality of weights, and means whereby said weights are lifted successively one after the other.

1,510,168. APPARATUS FOR THE CONTROL OF THE LEAVES OF WEAVING LOOMS. CAMILLE ANTOINE ZACKIEWICH, Paris, France. Filed Oct. 5, 1922. Serial No. 592,609. 2 Claims. (Cl. 139—76.)



1. In an apparatus for the control of the leaves of a loom, the combination of a control shaft for each leaf, a clutch sleeve slidable upon said shaft a forked lever engaging said sleeve, an eccentric disc loosely revoluble upon a stationary axle, an eccentric collar and an eccentric rod connecting said disc with said forked lever, a disc termed "pattern" having one or more teeth and adapted to rotate in co-operation with the main shaft of the loom, and means whereby said eccentric disc may be turned through one-half revolution at the passage of each tooth of said pattern disc.

1,510,169. CONTROL SYSTEM FOR COMPRESSORS AND THE LIKE. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed May 21, 1917, Serial No. 169,997. Divided and this application filed Nov. 5, 1919. Serial No. 335,816. 21 Claims. (Cl. 172—288.)



1. The combination of a motor, a separate main switch, a separate starting resistance cut-out switch, means for actuating said switches independently in turn to start said motor, a pressure controlled governing switch, and pneumatic means controlled by said governing switch for controlling the actuation of said cut-out switch and said main switch in turn to stop said motor.

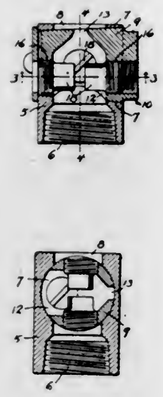
1,510,170. DUMPING VEHICLE. GEORGES FONLUPT, Paris, France. Filed Aug. 29, 1921. Serial No. 496,556. 2 Claims. (Cl. 298—21.)

1. In a motor vehicle with tipping body, the combination of a chassis, a transverse shaft at the rear of said chassis, longitudinally extending shafts disposed at the sides of said chassis, a first frame pivoted to the said transverse shaft, a second frame having connecting elements disposed upon the sides thereof and adapted to bear by means of said elements upon said longitudinally extending shafts, means for raising the front end of the first frame, and means for tilting the second frame transversely, the said vehicle body being adapted to rest upon the said frames.

1,510,171. FOLDING LEGS FOR ARTICLES OF FURNITURE. FREDERICK GEORGE HEARD, Ilford, England. Filed Mar. 8, 1922. Serial No. 541,932. 1 Claim. (Cl. 45—11.)

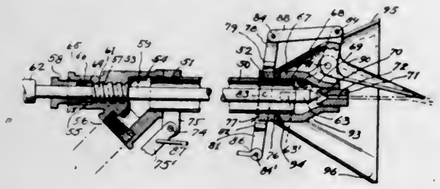
A foldable table, comprising a top, a pair of links at each end of said top, said links being pivoted at the underside of the top adjacent to the extreme ends thereof and adapted to be swung through an angle of 180° whereby the links may lie in a plane parallel with the top and below the latter or in a plane in alinement with said top, a cross bar connecting the members of each pair of links and adapted to extend beyond the top when the links are in alinement with said top, a leg pivoted to each of the links and movable therewith, and a bracing link pivoted to each of said legs and to the table top.

1,510,172. MANUFACTURE OF MANGANESE-PEROXIDE ANODES. MARTIN HOSENFELD, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Sept. 14, 1923. Serial No. 662,754. 7 Claims. (Cl. 204—4.)



1. The process for the manufacture of insoluble manganese peroxide anodes suitable for electrolysis with dissolved electrolytes, which consists in preparing a carrier from a chemically and electro-chemically indifferent substance, combining manganese nitrate with said carrier and burning said carrier at temperatures over 100° C. until all the manganese nitrate is converted into manganese peroxide.

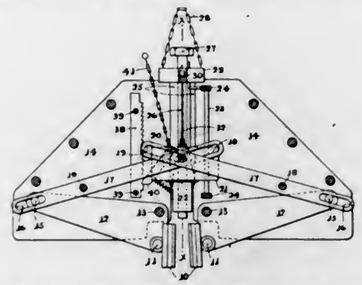
1,510,173. MANGANESE-PEROXIDE ANODE. MARTIN HOSENFELD, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesselschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Original application filed Sept. 14, 1923. Serial No. 662,754. Divided and this application filed May 1, 1924. Serial No. 710,311. 12 Claims. (Cl. 204—4.)



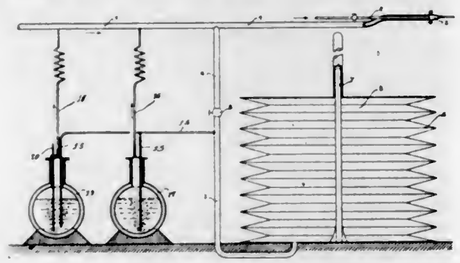
1. Anode of manganese peroxide for electrolytic purposes, comprising a carrier for the peroxide having the shape of the anode and consisting of a substance which in regard to the object in view is chemically indifferent.

1,510,174. SPRAY NOZZLE. CHARLES KELLY, Boston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1919. Serial No. 335,045. 16 Claims. (Cl. 299—114.)

1. A spray nozzle having a receiving portion of relatively large diameter, and an outlet portion of smaller diameter, coaxial with the receiving portion, and a plurality of radial reflectors independently adjustably engaged with and projecting inwardly from the wall of the receiving portion, and having deflecting faces which are adapted to stand either in planes inclined relatively to the longitudinal axis of the nozzle to cause a whirling motion of water flowing through the nozzle, or in planes parallel with said axis to permit the removal of obstructions by the water.



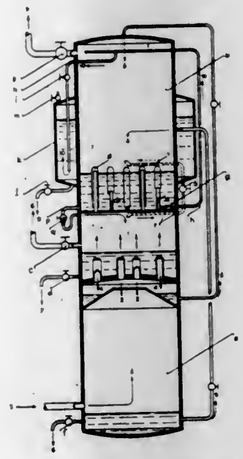
1,510,175. SPRAYING DEVICE. FRANK C. KINNEAR, New Waterford, Ohio. Filed June 11, 1923. Serial No. 644,638. 6 Claims. (Cl. 299—111.)



1. In a sprayer, the combination with a body, a nozzle therefor, a shield enclosing the nozzle, a valve to control the volume of fluid passing therethrough, and a deflector adjustably mounted upon the nozzel and within the shield; of a coupling at the other end of the body for attachment to a hose, an operating handle adjacent said coupling, and intermediate means connecting the deflector with the handle, whereby the operator can control the density, shape and direction of the spray.

1,510,176. AUTOMATIC LIFTING GRAB. STANLEY CHRISTIE KNIGHT, Gosforth, England. Filed June 30, 1922. Serial No. 572,000. 4 Claims. (Cl. 294—104.)

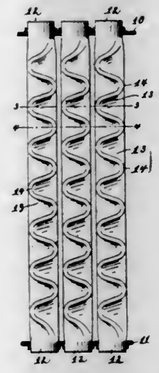
1. An automatic lifting grab comprising a frame, jaws pivoted thereto adapted to grip the body to be lifted, a member capable of movement relatively to said frame, pivoted links connecting said member to said jaws, and lifting tackle connected to said member, relative movement in one direction between said member and frame causing the jaws to approach and grip the body which movement automatically occurs when the grab engages the body, and relative movement in the reverse direction between said member and frame causing the jaws to retract and release the body which reverse movement automatically occurs when the weight of the body is taken off the grab.



1,510,177. APPARATUS FOR UTILIZING NONCOMPRESSED OXYGEN, ESPECIALLY IN AUTOGENOUS HIGH-TEMPERATURE PROCESSES. WALTER LACHMANN, Dresden, Germany. Filed Jan. 3, 1921. Serial No. 434,833. 4 Claims. (Cl. 158—28.)

1. An apparatus for supplying non-compressed oxygen, comprising, in combination, a vessel adapted to contain liquid oxygen, a gas receptacle, a discharge pipe communicating with said vessel, a conduit for establishing communication between said receptacle and discharge pipe, said conduit being also in communication with the vessel, and means in said discharge pipe for inducing a flow of gas from said vessel.

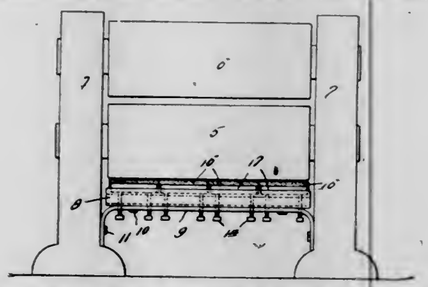
1,510,178. RECTIFYING COLUMN. WALTER LACHMANN, Dresden, Germany. Filed Jan. 3, 1921. Serial No. 434,835. 2 Claims. (Cl. 62—122.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)



1. A rectifying column for separating the components of gas mixtures, comprising a vessel divided into a rectifying chamber and a preparatory separating chamber disposed below said rectifying chamber, said separating chamber having near its upper end a centrally perforated partition forming a liquid compartment and said rectifying chamber being subdivided into an upper compartment and a lower compartment, said upper compartment being adapted to contain a liquid, a pipe communicating with the separating chamber adjacent to the bottom thereof and with the upper compartment of the rectifying chamber at approximately the center of its height, a pipe communicating with the liquid compartment at the upper end of the separating chamber and with the upper end of said upper compartment, a condenser-vaporizer communicating with the separating chamber above its upper liquid compartment and extending into the lower compartment of the rectifying chamber, warming means extending into the upper compartment from the bottom thereof, said warming means being adapted to conduct vapors from the lower compartment into the upper compartment through a liquid contained in said upper compartment, a by-pass communicating with the upper compartment near its bottom and with the lower compartment near the top thereof, a by-pass communicating with the lower compartment near the top thereof and with the upper compartment at a point remote from its bottom, valve-controlled outlets for drawing off the liquid from the lower end of the separating chamber and the lower compartment of the rectifying chamber, a valve controlled outlet for drawing off the gas from said lower compartment, and an inlet for supplying the gas mixture to the separating chamber.

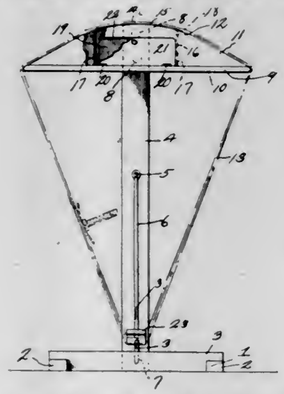
1,510,179. METHOD OF PRODUCING PHOSPHORUS NITRIDE. FRANS GEORG LILJENROTH, Stocksund, Sweden. Filed Aug. 7, 1922. Serial No. 580,290. 6 Claims. (Cl. 23—10.)

1. The method of producing phosphorus nitride from its elements, which consists in bringing nitrogen and phosphorus to react directly with each other at an elevated pressure and at an elevated temperature which is lower than the temperature of dissociation of phosphorus nitride at the pressure used.



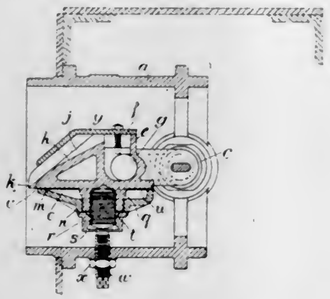
1,510,180. RADIATOR. ERIC G. LINDHE, New York, N. Y. Filed June 13, 1923. Serial No. 645,050. 3 Claims. (Cl. 257—129.)

1. A radiator composed of a plurality of tubes each comprised of a series of cells connected by flattened



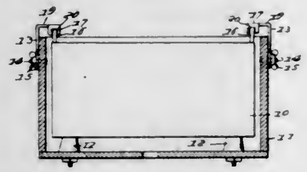
throats, each alternate throat at an angle to the next, and arranged in a group with the throats of the same angularity lying in the same planes, to produce a plurality of series of channels between adjacent throats extending diagonally through such group.

1,510,181. POLISHING DEVICE. DANIEL W. MCCLURE and HAROLD HARRIS, Woodlawn, Pa. Filed July 25, 1923. Serial No. 653,642. 1 Claim. (Cl. 51—251.)



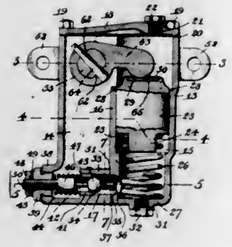
A polishing device comprising a bar, adjusting screws threaded through the bar, a U-shaped guide member receiving the bar, set screws passing through the intermediate portion of said guide member, a U-shaped holder member movably mounted between the sides of the guide member and bearing at its intermediate portion against the ends of the set screws, longitudinally curved leaf springs convexed toward each other and secured together at points between their ends, the ends of one of the leaf springs bearing upon the intermediate portion of the holder in the vicinity of the ends thereof and a polishing stone received between the sides of the holder and bearing at its ends upon the ends of the other leaf spring.

1,510,182. INNER-TUBE-PATCHING STAND. WILLIAM L. MCGOWAN and LENI LAME, Galt, Mo. Filed Feb. 7, 1923. Serial No. 617,648. 1 Claim. (Cl. 154—9.)



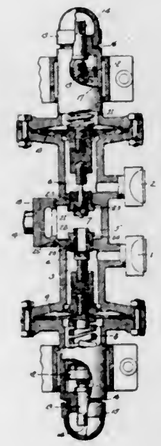
An inner tube patching stand, comprising a base, a vertically disposed standard carried by the base, a guide rod carried by the standard, a vertically movable foot engaging member carried by the guide rod and held at various adjusted positions by frictional engagement with the guide rod, a member carried by the upper end of the standard, said member comprising a base, spaced bars carried by said base and having their upper sides arcuate shaped, a door in the side of one of the bars centrally thereof, a U-shaped member interposed between the bars, the arms of the U-shaped member extending downwardly into kerfs in the inner faces of the bars, thereby forming a receptacle behind the door carried by one of the bars.

1,510,183. LIQUID-HYDROCARBON BURNER. FRANCIS R. MACDONALD, WILLIAM R. A. PICKERSGILL, and FREDERICK S. LOVICK-JOHNSON, London, England. Filed Dec. 11, 1922. Serial No. 606,306. 4 Claims. (Cl. 158—78.)



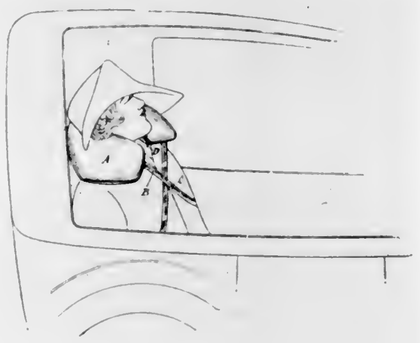
1. In a burner of the character described, the combination with a casing, a fuel nozzle unit mounted in the casing and provided with an inclined weir and a rigid combed dripping edge and adapted to spread a fuel film flowing over the weir and dripping over the edge, and a supply pipe for the nozzle unit, of a second nozzle arranged adjacent the first and adapted to direct an atomizing agent into angular impact with the spread fuel, and a supply pipe for the second nozzle, said fuel nozzle unit being pivotally, adjustably and detachably mounted about the supply pipes whereby the angle of declination of the weir may be adjusted to alter the velocity and thickness of the fuel film.

1,510,184. STORAGE-BATTERY SUPPORT. JOHN M. MANNING, Friendship, Tenn. Filed Aug. 16, 1921. Serial No. 492,845. 6 Claims. (Cl. 204—29.)



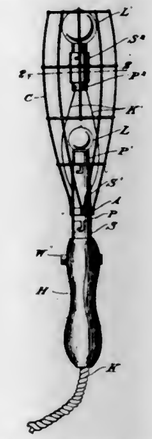
1. A supporting device for a storage battery having a box or housing provided with a battery supporting cushioned seat and yielding means for holding the battery in bearing relation with the seat and consisting of clamps having a cushioned engagement with the battery case.

1,510,185. SHOCK ABSORBER. ADOLPH W. F. MANZEL, Buffalo, N. Y., assignor to Manzel Bros. Co., Buffalo, N. Y., a Corporation of New York. Filed May 12, 1922. Serial No. 560,292. 40 Claims. (Cl. 188—88.)



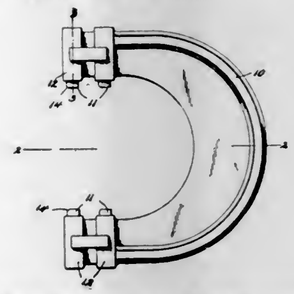
1. A shock absorber, comprising a casing having two chambers connectel by a passage, oppositely movable elements within said passage controlling the flow of fluid therebetween from each chamber to the other, and means for causing the fluid to flow from each chamber to the other through said passage.

1,510,186. AUTOMATIC EXPANSION VALVE. HENRY H. MARSHALL, West Hartford, Conn., assignor to The Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed Feb. 21, 1923. Serial No. 620,450. 6 Claims. (Cl. 50—11.)



3. The combination of an expansion valve controlled by the pressure in the low pressure side and an automatic stop valve controlled by the pressure on the high pressure side with an intermediate chamber between them, the expansion valve having less area than the stop valve so as to avoid wire-drawing of the latter.

1,510,187. HEADREST. BETHINE A. MARTIN, Philadelphia, Pa. Filed Oct. 1, 1923. Serial No. 665,743. 4 Claims. (Cl. 155—175.)

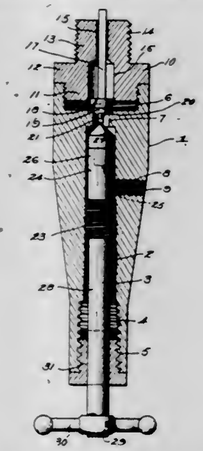


1. A head rest comprising a relatively thick cushion adapted to be placed against the back of the neck of the user, and means that are attached to the ends of said cushion and adapted to cross each other upon the breast of the user and extend in opposite directions around his waist and there be fastened to each other.

1,510,188. DIRECTION INDICATOR FOR AUTOMOBILES. FRANK A. MATTKE, Vernon, Calif. Filed Nov. 26, 1921. Serial No. 518,080. 1 Claim. (Cl. 177—329.)

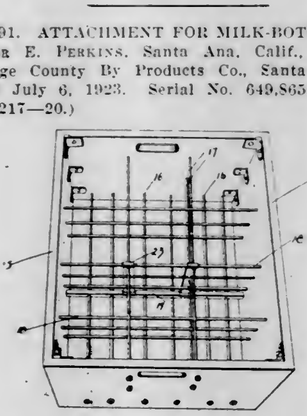
A direction signal for motor vehicles comprising a handle, a socket supported on the handle, a lamp received in the socket, a cage sustained on the socket, extensions formed on the cage, and a second socket supported on the extensions and disposed within the cage.

1,510,189. LIMIT SNAP GAUGE. ALEXANDER MELDRUM and CARL GABRIELSON, Syracuse, N. Y., assignors to Meldrum-Gabrielson Corporation, Syracuse, N. Y., a Corporation of New York. Filed Apr. 1, 1921. Serial No. 457,729. 1 Claim. (Cl. 33—163.)



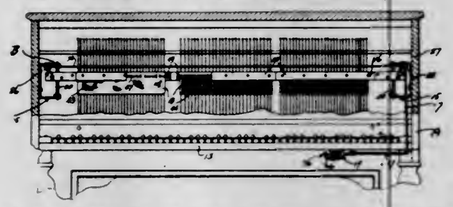
A limit snap gauge comprising a frame provided with opposite pin sockets and a measuring stud or pin in each socket having a portion non-circular in cross section, non-rotatably fitting and longitudinally movable in a matching non-circular portion of said socket with a flat end work surface for measuring in a plane at right angles to the line of movement of the pin in the frame and having on the side facing the work a flat surface presenting a straight edge at right angles to the line of movement to the work, and a beveled surface connecting the working surface and the flat surface facing the work.

1,510,190. GAUGE COCK AND BLOW-OFF VALVE. GEORGE ODUM, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 527,429. 2 Claims. (Cl. 251—140.)



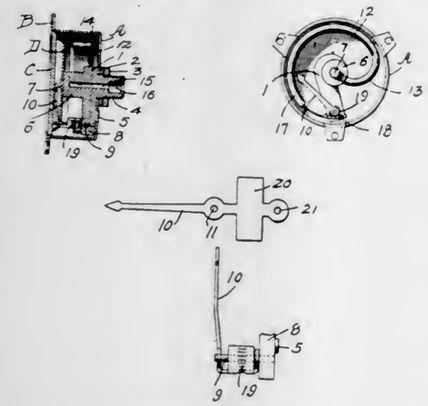
1. A gauge cock or blow off valve including a vertically disposed casing formed with a longitudinal bore, a reduced passage above and communicating with said bore and forming a valve seat at its upper end, a passage above said reduced passage and having communication therewith; an outlet in the casing communicating with the bore below said reduced passage, a member operative in said bore for adjustment longitudinally thereof, and a

turbinoid valve cooperating with said seat and having extensions at its ends with maximum dimensions approximating the diameter of the respective passages in which



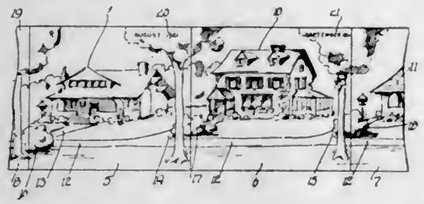
said extensions are located, the operating member being adapted to engage one of said extensions to lift the valve from its seat, said valve having inclined channels to receive the fluid under pressure and rotate the valve.

1,510,191. ATTACHMENT FOR MILK-BOTTLE CASES. OSCAR E. PERKINS, Santa Ana, Calif., assignor to Orange County By Products Co., Santa Ana, Calif. Filed July 6, 1923. Serial No. 649,865. 3 Claims. (Cl. 217—20.)



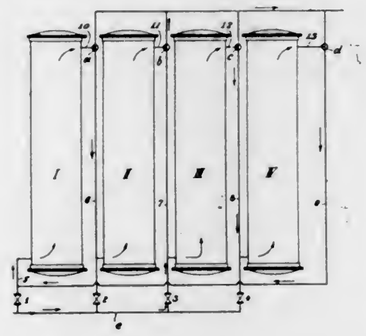
1. An attachment for bottle cases comprising a strip of U-shape in cross section, said strip being provided at intervals with openings and slots, strips arranged at an angle with respect to the first strip and having their opposite ends bent to form sleeves, the sleeves on one end of the strips being disposed within said slots.

1,510,192. TONE-MODIFYING DEVICE FOR PIANOS. ROLAND C. PINDER, Lima, Ohio. Filed Sept. 14, 1921. Serial No. 500,546. 12 Claims. (Cl. 84—224.)



8. In a device of the class described, the combination with a piano including bass and treble strings, of a rail mounted in slidable manner therein, and including sections connected together in parallel relation and offset with respect to each other, a plurality of wires detachably mounted upon said rail sections, tone modifying members for the individual treble strings of the piano scale for adjustable and detachable arrangement on said wires, and a single adjustable and detachable tone modifying member mounted on one of said wires for the bass strings of the piano scale.

1,510,193. PRESSURE GAUGE. BEN P. PAYOR, JR., Maxwell, Calif. Filed Jan. 2, 1923. Serial No. 610,321. 5 Claims. (Cl. 73—109.)

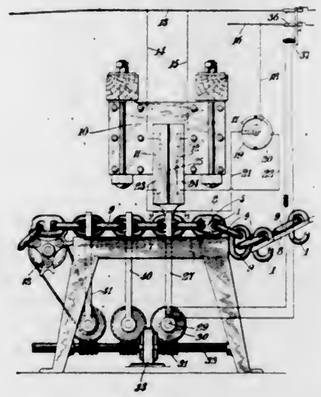


1. In a pressure gauge, a housing, an expansion tube therein, means connecting said tube with a source of pressure supply, an indicator face on the housing including a graduated scale, a pointer co-acting with said scale, a pinion fixed to the pointer, and a rack connected to the expansion tube and meshing with said pinion, said connecting means comprising a core block having a bore adapted to open to the pressure supply, said expansion tube having one end secured to said block and communicating with said bore.

1,510,194. BOOK. WILLIAM A. RADFORD, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 452,045. 4 Claims. (Cl. 283—56.)

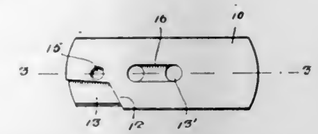
1. The combination with the successive issues of a publication of a series of printed sheets forming parts of said successive issues, said sheets bearing pictorial representations of houses of different styles and being adapted to be joined edge to edge to form a continuous panoramic view, the individual houses being represented on a scale and style congruous to each other, the publication containing a sheet having a plan layout of the house pictorially represented on the individual sheet forming a part thereof, said individual pictorial representation bearing sheets bearing on the fore ground parts of a walk or street to simulate a continuous panoramic view, the edges of said sheets bearing pictorial representations to mask the joining of the sheets, and each sheet having reference means to the issue of the publication in which it was originally contained.

1,510,195. FERMENTATION PROCESS. ADOLF RÖMER, Stuttgart, Germany, assignor to Deutsch-Koloniale Gerb- & Farbstoff-Gesellschaft m. b. H., Karlsruhe, Germany, a Society of Germany. Filed Aug. 27, 1919. Serial No. 320,262. 4 Claims. (Cl. 195—20.)



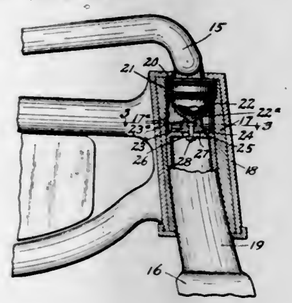
1. A method of continuous fermentation of technical sugar solutions consisting in conducting the sugar solutions through a plurality of vessels connected in series, each vessel being charged with fixed ferment of different fermenting power.

1,510,196. FERMENTATION PROCESS. ADOLF RÖMER, Stuttgart, Germany. Filed Apr. 9, 1921. Serial No. 460,148. 10 Claims. (Cl. 195—20.)



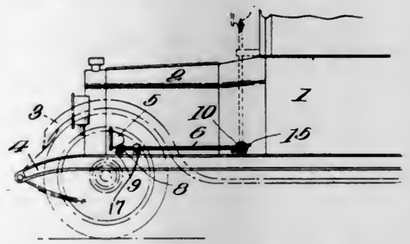
10. The method of continuous fermentation of waste sulphite liquor which consists in passing the solution through a plurality of vessels connected in series, each vessel containing discrete masses of fixed yeast and continuing the flow at such a rate as to allow contact between the solution and the yeast for a sufficient time to produce fermentation of the fermentable substances contained in the solution.

1,510,197. METHOD OF AND MACHINE FOR ELECTRIC WELDING. MICHAEL B. RYAN, Milford, Conn. Filed Aug. 8, 1923. Serial No. 656,405. 6 Claims. (Cl. 219—5.)



1. The method of electrically welding a chain link having a gap therein which comprises inserting a plug in the gap and applying welding current first to one of the joints between the plug and the link and then to the other of said joints.

1,510,198. HOLDER. JOHN L. SCOTT, Grenada, Miss. Filed Dec. 5, 1923. Serial No. 678,757. 1 Claim. (Cl. 30—14.)



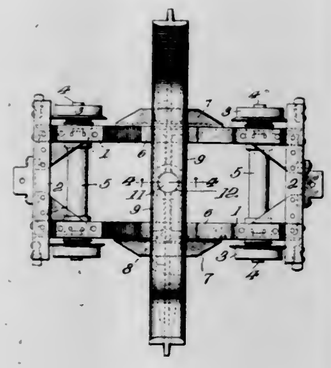
A holder for safety razor blades having a plurality of spaced openings, said holder being formed from a single piece of material and of channel like formation in cross section to slidably receive the blade, means for limiting the movement of the blade in one direction through the holder, said holder having one corner cutaway to allow the corresponding corner of the blade to project from the holder for use, means carried by the holder and adapted to be received by one of the openings in the blade for holding the latter fixed relatively to the holder, and said holder having a slot adapted to coincide with the openings in the blade whereby an instrument may be projected through the slot and in either of said openings to facilitate moving the blade within the holder.

1,510,199. PNEUMATIC CUSHION FOR HANDLEBARS. HENRY SEIBEL, San Francisco, Calif., assignor to United Air Spring Company of Arizona, Phoenix, Ariz., a Corporation of Arizona. Original application filed July 2, 1920, Serial No. 393,554. Divided and this application filed Jan. 11, 1923. Serial No. 611,969. 5 Claims. (Cl. 208—97.)

1. A steering member for a vehicle having a flexible support, and a deformer engaging said support, the turnable steering means for a wheel of said vehicle supporting said deformer, with said deformer arranged for lateral movement relative to said support.

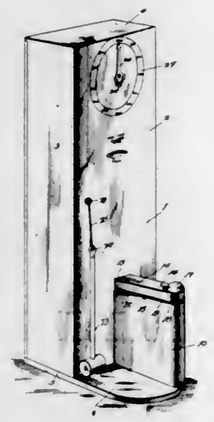
1,510,200. ADJUSTABLE HEADLIGHT. JAMES B. WATSON, Thurston, Ohio. Filed Feb. 14, 1924. Serial No. 692,783. 1 Claim. (Cl. 240—7.)

An auxiliary light structure for motor vehicles comprising a lamp, an arm to one end of which said lamp



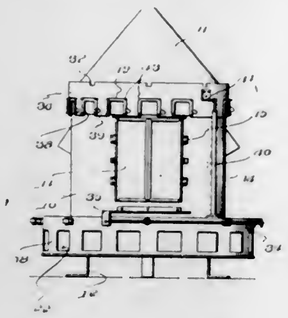
is attached, said arm being pivotally secured to the body of said vehicle at its other end and means for holding said arm and light in a horizontal position between the hood and fender, below and at the rear of the headlight whereby the headlight, hood and fenders serve to direct the rays from the auxiliary light so as to eliminate diffusion and the consequent glare in the eyes of the driver of an oncoming machine.

1,510,201. GAUGE FOR STAPLING MACHINES. JOHN W. WELCH, Atlanta, Ga. Filed Sept. 4, 1923. Serial No. 660,928. 2 Claims. (Cl. 2—7.)



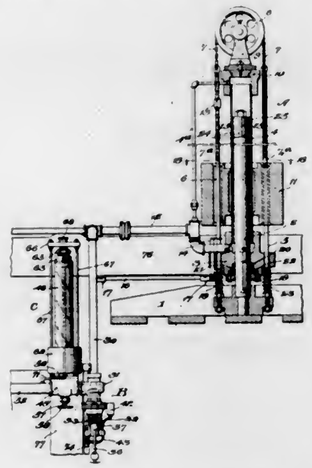
2. The combination with the saddle of a machine for stapling or stitching pamphlets or the like, of a gauge comprising a base section which is inverted V-shaped in cross section and which has a longitudinally extending slot in one of its sides, a top section of inverted V-shape in cross section, said top section being adapted to fit over the base section and being provided with a corresponding longitudinally extending slot, and means to clamp the gauge sections to the saddle whereby the base section is longitudinally adjustable with respect to the saddle and adapted to position the leaves or body of the pamphlet to be stitched with respect to the stitching mechanism and the top section is adjustable with respect to the base section and adapted to position the cover of the pamphlet with respect to the body thereof.

1,510,202. BOLSTER-ARM CAR. HAROLD E. AUSTIN, Louisville, Ky., and JESSE C. COOK, Jeffersonville, Ind., assignors to American Creosoting Company, Louisville, Ky., a Corporation of Indiana. Filed Dec. 8, 1922. Serial No. 605,728. 14 Claims. (Cl. 105—365.)



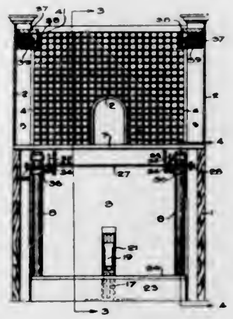
1. A timber car for wood impregnating cylinders including a frame having longitudinal side sills and end sills, and an upwardly facing concaved bolster arm supported by said side sills.

1,510,203. STRIKING MACHINE. CLARENCE L. BARNHART, South Brooklyn, N. Y. Filed Apr. 1, 1922. Serial No. 548,718. 13 Claims. (Cl. 265—22.)



1. In a striking machine, an anvil member, an indicator shaft, a volute wing upon said shaft, indicator mechanism actuated through rotation of the shaft, and a rider actuated through movement of the anvil member upon the application of force thereto to move in the path of the active surface of the cam and effect rotation of the said shaft.

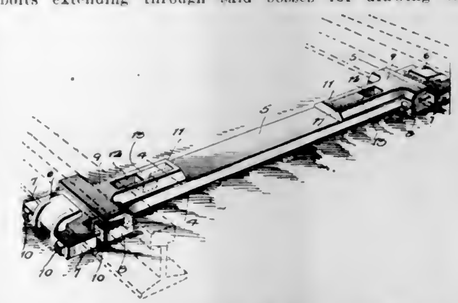
1,510,204. TRAP NEST. CHARLES BAZZILL, Trinidad, Colo. Filed May 19, 1923. Serial No. 640,217. 3 Claims. (Cl. 119—47.)



2. A trap nest comprising a cylindrical casing having a closed top and an open bottom, said casing being formed with a door opening and a relatively small opening leading thereinto, a pair of hingedly mounted doors normally closing the door opening, an egg carrier rotatably mounted upon the lower end of the casing and divided into compartments, a bottom plate movably mounted within the casing, a latch device carried by the casing, an operative connection between said movable bottom and said latch device, spring means tending to rotate the egg carrier in one direction, a plurality of stops carried by the carrier and co-operating with said latch for holding the carrier at a selected position, a ring rotatably mounted upon the upper end of the casing and formed with cut out portions successively registering with said relatively small opening, and an elastic band surrounding each cut out portion.

1,510,205. COTTON TRAMPER. JAMES T. BEATY, Charlotte, N. C., assignor to Liddell Company, Charlotte, N. C., a Corporation of North Carolina. Filed Apr. 9, 1924. Serial No. 705,344. 10 Claims. (Cl. 138—10.)

1. In a device of the kind described, the combination of a tramper head, means to operate said head including a valve, and means to time the operation of said valve, said timing means adapted to be adjusted to vary the speed of the operation of the device.

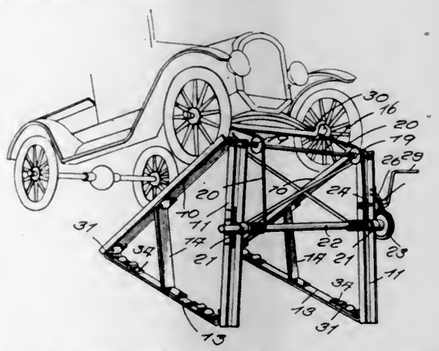


1,510,206. BANK CAGE. THOMAS BOND, Brantford, Ontario, Canada. Filed Aug. 18, 1923. Serial No. 658,140. 7 Claims. (Cl. 20—1.01.)

1. In a bank cage, the combination with the front thereof, of a vertically slidable bullet proof shutter, means for pulling the shutter down into its normal position, releasable means for normally holding the shutter in the normal position, a tension spring having its lower end provided with a projection adapted to engage the bottom edge of the shutter when in the normal position, and its upper end provided with an extension adapted to engage said shutter upon the latter being thrown upwardly.

1,510,207. RAILWAY TIE. WILLIAM BOST, St. Charles, Va. Filed Apr. 23, 1924. Serial No. 708,524. 4 Claims. (Cl. 238—332.)

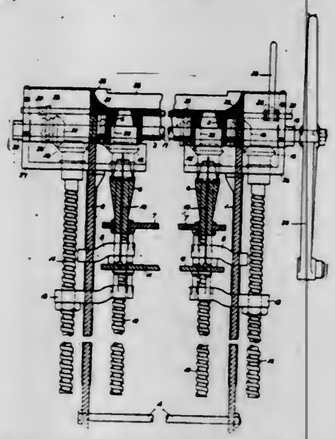
1. A rail tie comprising a body having its ends provided with rail engaging means, clamps mounted for sliding movement on said body and adapted to engage the inner sides of a pair of rails, said body and said clamps being provided with laterally projecting bosses, bolts extending through said bosses for drawing the



clamps into engagement with the inner base flanges of the rails, and means cooperating with said clamps for preventing the upward movement of the same.

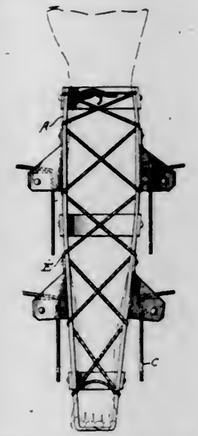
1,510,208. MINE DOOR. WALTER C. CANTERBURY, Beckley, W. Va. Filed Jan. 12, 1924. Serial No. 685,865. 5 Claims. (Cl. 246—304.)

1. Apparatus of the class described including a door frame, oppositely swinging doors mounted therein, a track extending through the frame, upstanding levers on opposite sides of the frame, a depressible operating rail close to one of the rails of the track, cushioning means for transmitting motion from said operating rail to one of the upstanding levers, cushioning means for transmitting motion from the other upstanding lever to one of the doors, means for transmitting motion to the other door from the first named upstanding lever, and a single spring connecting the upstanding levers for holding the doors normally closed and for maintaining the operating rail in raised position.



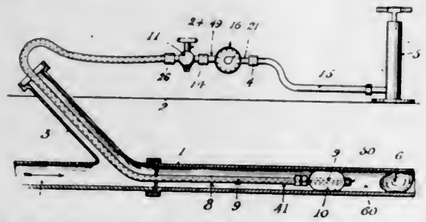
1,510,209. AUTOMOBILE HOIST. FRED C. CHRISTMAN, Galion, Ohio. Filed Sept. 5, 1923. Serial No. 661,082. 2 Claims. (Cl. 254—88.)

1. In an automobile hoist, spaced inclined channeled track members adapted to receive and guide the wheels of an automobile, brace members associated with said track members and supporting the upper ends thereof, a shaft journaled upon said brace members, a second shaft secured against rotation with relation to the brace members and carried by said brace members, said second



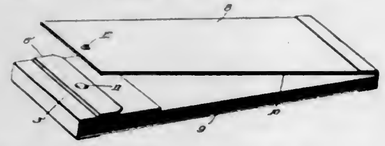
shaft being arranged above the first named shaft, a pair of pulleys rotatable upon the last named shaft and shiftable longitudinally thereof, cables secured to the first named shaft and trained over said pulleys, means at the free ends of said cables for securing the same to the chassis of a vehicle, and means for rotating the first named shaft.

1,510,210. MACHINE FOR MOLDING NIGHT LIGHTS. WILLIAM HARPER DAY, Hounslow, England. Filed Apr. 9, 1923. Serial No. 630,973. 10 Claims. (Cl. 18—27.)



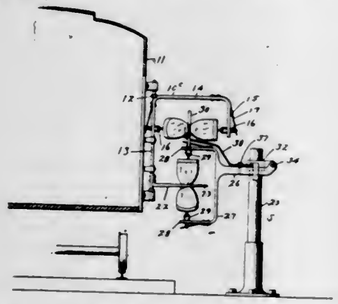
1. A machine for molding tapered night lights comprising stationary end plates, a mould box joining said end plates, a series of inverted moulds in said mould box, a series of vertically movable mould covers adapted to be raised to a position to close the open mouths of said inverted moulds, a corresponding series of corepins adapted to be positioned within said moulds and means for withdrawing said mould covers and said corepins from said moulds with the finished night lights adhering to said covers and said pins.

1,510,211. SWIMMING AID. MELVILLE L. DE WITT, Easton, Mass. Filed Nov. 21, 1923. Serial No. 676,167. 1 Claim. (Cl. 9—21.)



A swimming attachment for the leg comprising a rigid strap extending under the foot and upwardly on both sides of the leg to a point below the knee, a lacing or straps extending along the front and connecting the leg portions of said first named strap, also straps rigidly connected with the leg portions of said first named straps embracing the rear of the leg, and laterally swinging vanes secured to first mentioned strap adapted to swing outwardly upon a rearward movement of the foot.

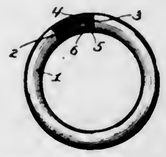
1,510,212. DEVICE FOR OPENING STOPPED DRAIN-PIPES. RHESA G. DU BOIS, East Orange, N. J. Filed Nov. 29, 1922. Serial No. 604,072. 9 Claims. (Cl. 137—70.)



1. In a pneumatic pipe-clearing apparatus, a pair of flexible air-delivering pipes placed one within the other, in combination with an expansible stopper-head supplied with air by one of said pipes to expand and seal the pipe to be cleared, the other pipe being arranged and adapted to pass air beyond the stopper-head and to deliver it between the head and stoppage.

1,510,213. COVER FOR CHECK BOOKS. HARRY E. EWING, Uniontown, Pa. Filed May 9, 1922. Serial No. 559,581. 1 Claim. (Cl. 231—19.)

A bank check book of the character described comprising a pad including stubs, binder ends for the stubs, a lip formed on one binder end and being raised in a manner to provide a space therebetween and the pad, said last mentioned binder end having its upper portion including the lips reinforced by being bent upon itself with the end thereof terminating in alignment with the end of the pad, a back for the pad, a closure flap flexibly secured to the binder end opposite the raised end and having its free end terminating inwardly from the stub end to be received in the space between the lip and the pad and a sheet of blotting paper fixed to the lower surface of the closure flap for the purpose specified.



1,510,214. MAIL-BAG-HANDLING DEVICE. ARTHUR FORD, Collinsville, Ala. Filed Jan. 30, 1922, Serial No. 532,913. Renewed July 7, 1924. 2 Claims. (Cl. 258—11.)

1. The combination with a mail bag handling apparatus including bag supporting members, of means for re-

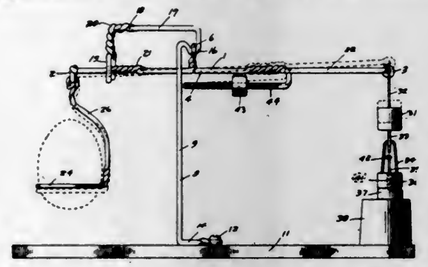
movably securing a bag in position, said means including a spring gripping element open at one end and slidable through an opening in said apparatus and a spring arm secured to the opposite end of the gripping member for normally closing the open end of the same.

1,510,215. TIRE. LOUIS FRITZ, Memphis, Tenn. Filed Aug. 15, 1922. Serial No. 581,966. 2 Claims. (Cl. 152—9.)

1. A tire comprising a tube of resilient material, a core extending through said tube and maintaining it against collapse, and removable means for securing the ends of the tube together whereby different portions of its exterior may be disposed in position to constitute a tread.

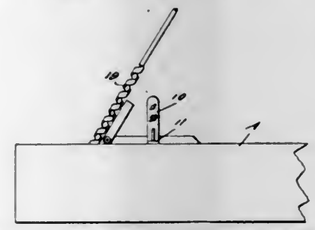
1,510,216. BLEACHING POWDER. CHARLES A. GAMMAL, Worcester, Mass. Filed Feb. 19, 1924. Serial No. 693,899. 8 Claims. (Cl. 23—13.)

1. The process of stabilizing bleaching powder which consists in treating commercial bleaching powder with water, and thereafter removing the water.



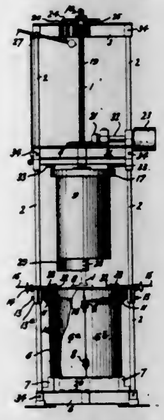
1,510,217. TOILET HEATING COMB. SOLAM GOLDBERG, Louisville, Ky. Filed Feb. 7, 1924. Serial No. 691,241. 3 Claims. (Cl. 132—14.)

1. A toilet comb for heating and straightening the hair, formed of metal and embodying a back and spaced teeth extending laterally therefrom, each tooth having its face disposed at a right angle to the longitudinal axis of the comb and tapering forwardly from a maximum point of width, and tapering rearwardly from this maximum point of width toward the back, and a handle carried by the back.



1,510,218. AUTOMATIC EGG GRADER. EDWARD GOODWIN, Folsom, Calif. Filed Jan. 5, 1922. Serial No. 527,163. 3 Claims. (Cl. 255—48.)

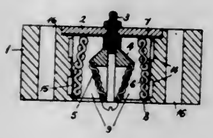
1. In an egg grader of the character described, the combination of a balancing lever having an egg receptacle suspended from one end so that the same is normally balanced by the other end and a selective weight system associated with said other end comprising a lower weight normally resting on a stationary support, a second weight normally resting on the lower weight, a rod extending from the lower weight through the second weight having a head thereon adapted to limit the travel of the second weight relative to the lower weight, a hook extending



upwardly from the second weight, and a third weight suspended from the lever arm having a downwardly extending hook engaging the former hook for limiting the travel of the third weight relative to the second weight.

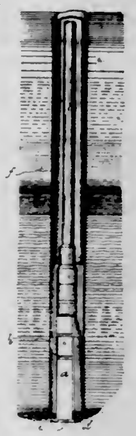
1,510,219. AUGER GUIDE. ROSWELL B. HARDING, Buckley, Wash. Filed Oct. 17, 1923. Serial No. 669,176. 1 Claim. (Cl. 33—185.)

In an auger guide, a clamp comprising spaced uprights, a base member projecting at a right angle from the lower end of each upright, whereby said clamp can be supported upon the work to be bored, a set screw connected with the respective parts of the clamp for holding them operatively related, an additional set screw carried by one part of the clamp and cooperating with the other part to effect an adjustment between said parts, and a square adapted to be arranged between the parts of the clamp for the purpose specified.



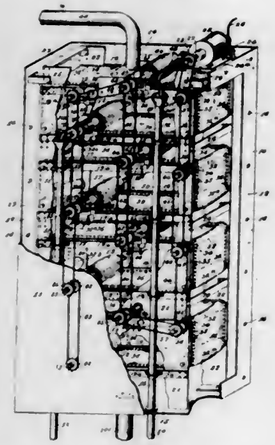
1,510,220. CONCRETE-PIPE-MAKING MACHINE. BERT HEFFER, Esher, England. Filed Mar. 22, 1923. Serial No. 626,886. 8 Claims. (Cl. 25—30.)

1. A concrete pipe making machine comprising outer and inner moulds between which concrete is fed, the



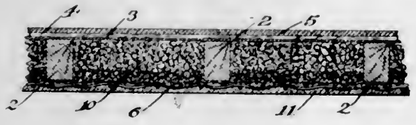
inner mould of the full length of the outer mould and being adapted to support the concrete while it is being tamped, a trowel carried at the lower end of the inner mould, and means for withdrawing helically from the pipe being made the inner mould with its trowel so that said trowel travels helically over and smooths the inner surface of the pipe as said surface is exposed by the withdrawal of the inner mould, substantially as described.

1,510,221. VAPORIZER. ERNEST E. HERMAN, Reading, and LIONEL V. RILEY, Maidenhead, England, assignors to The Dental Manufacturing Company Limited, Alston House, London, England. Filed July 9, 1923. Serial No. 650,538. 5 Claims. (Cl. 48—180.)



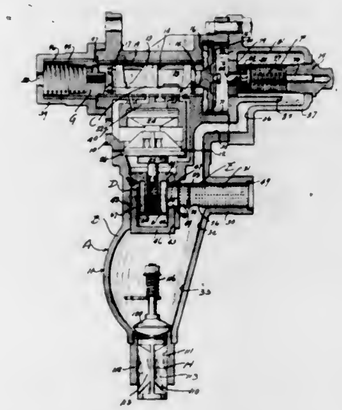
3. A device for evaporating liquid particles in the gaseous fuel mixture for internal combustion engines, comprising a housing adapted to be combined with the induction system and having air inlets therein, a cross member of stream line section mounted at the delivery end of said housing, a screw centrally mounted in said cross member, a solid upper cone, a lower cone of interwoven wire and asbestos, said cones being mounted base to base on said screw, a partly tapered outer sleeve of interwoven wire and asbestos mounted in said housing, on which the liquid particles impinge, a washer mounted in said housing and retaining said outer sleeve, grooved inner walls in said housing communicating with said air inlets, a gauze filter sleeve between said outer sleeve and said inner walls, and a perforated disc adapted to register with and adjust said air inlets revolubly mounted on said housing.

1,510,222. EXPANSION PERCUSSION BIT FOR DRILLING OR BORING OPERATIONS. JOHN HENRY HERMAN, Melbourne, Australia. Filed July 9, 1920. Serial No. 395,069. 3 Claims. (Cl. 255—73.)



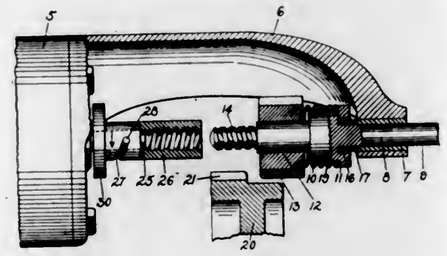
1. In a percussion bit for drilling and boring operations, a bit body having a lower narrow cutting edge and a second broader cutting edge spaced above the lower edge and offset laterally therefrom, said bit body provided in one side adjacent to the narrow cutting edge with a narrow deep recess, a bearing member movably fitting within the recess, a pivot carried by the bit body and engaging through the upper end portion of said movable member and adapted to receive thrust thereof when extended, and a horizontally arranged spring seated in the body in the recess for normally extending said member from the side of the bit body whereby upon extension of said member the lower cutting edge is adapted to bear against the wall of a well bore and to maintain said bit body in substantially offset relation with the cutting edges in the bore and counterbore, said movable member having a portion arranged to block the outer end of said recess for maintaining the space behind the movable member closed.

1,510,223. SEWAGE-TREATING APPARATUS. OTTO A. HERRMANN, Waterbury, Conn. Filed Jan. 5, 1923. Serial No. 610,797. 1 Claim. (Cl. 210—2.)



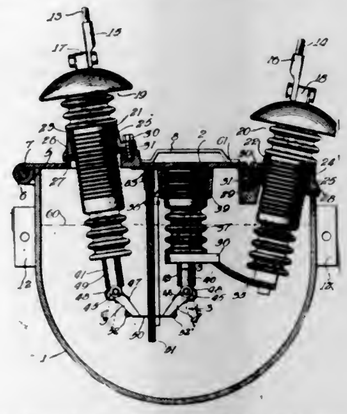
In an apparatus for treating sewage, a casing, a series of endless flexible filtering screens having, horizontal upper and lower stretches located in said casing, means for delivering raw sewage to the top stretch of the top screen, each of said screens being driven by a pair of upper pulleys and a pair of lower pulleys, the upper pulleys being concave and the lower pulleys being convex, whereby both stretches of said screen will be concave upwardly and will form channels to hold fluent material from falling out, the filtrate from the upper stretch of each screen being refiltered by the lower stretch thereof, and the filtrate from the upper screen being refiltered by the lower screens in succession, each of said screens having a pair of rotary convex brushes in contact therewith for cleaning the sludge therefrom, two vertical rows of inclined troughs engaging said brushes to collect the sludge therefrom, and a pair of common sludge pipes located outside said casing for receiving the sludge from the two vertical rows of troughs respectively.

1,510,224. BUILDING CONSTRUCTION. WILLIAM H. HICKS, Los Angeles, Calif., assignor to Lycurgus Lindsay, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,084. 7 Claims. (Cl. 72—33.)



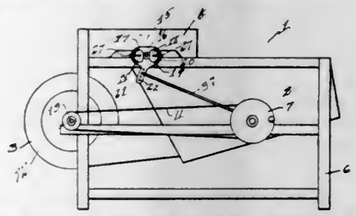
1. A composite wall consisting of stud members having an inside layer or sheet forming impervious mold-like sides along the inside faces of the studs, a webbing applied to the outside faces of the studs to form a mold side, reinforcing fabric secured over the said webbing, a cementitious filling in the mold-like chambers formed between the studs and the inside and outside layers thereon, and an exterior cementitious coat embedding the fabric and the webbing.

1,510,225. TRIPLE VALVE FOR AIR-BRAKE SYSTEMS. ELLIS M. HOWARD, Oviedo, Fla. Filed Apr. 27, 1923. Serial No. 635,008. 28 Claims. (Cl. 303—33).



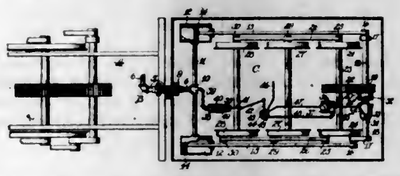
1. In combination with an air brake triple valve including a housing providing a compartment having an opening therein through which air under pressure flows into the compartment, of a strainer over said opening adapted to collect dust and foreign material from the air passing into said compartment, said strainer having an opening therein through which collected dust and foreign material may fall out of the path of air travel.

1,510,226. ENGINE STARTER. CLARENCE O. HOWLAND, Toledo, Ohio, assignor, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 15, 1920. Serial No. 365,790. 6 Claims. (Cl. 74—7.)



1. In an engine starting mechanism the combination of a rotatable engine member, driving means therefor normally detached from said member, a drive shaft normally detached from said driving means and in axial alignment therewith and means constructed to be moved into engagement with said driving means by the initial rotation of said shaft to transmit a driving torque from said shaft to said driving means.

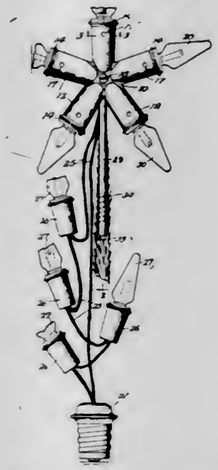
1,510,227. CUT-OUT FOR ELECTRICAL CIRCUITS. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 453,889. 13 Claims. (Cl. 200—114.)



1. In combination, a casing, a lid for said casing, a fuse structure movable with said lid and a single terminal for completing a circuit through the fuse structure when the lid is closed.

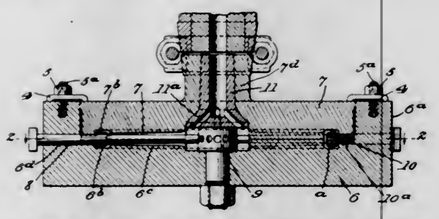
1,510,228. FANNING-MILL GATE. NELS C. O. P. JACOBSEN, Walla Walla, Wash. Filed Apr. 8, 1924. Serial No. 704,907. 6 Claims. (Cl. 130—17.)

1. In a fanning mill gate, a gate comprising a pair of wing members, movably mounted beneath the outlet of the hopper of said mill, means to independently adjust said wing members and means engageable with the adjusting means to collectively oscillate said wing members.



1,510,229. AUTOMATIC CLUTCH-CONTROLLING DEVICE FOR POWERED TENDERS. EDWARD SPENCER JOHNSON, Davenport, Iowa. Filed Mar. 1, 1922. Serial No. 540,347. 4 Claims. (Cl. 105—48.)

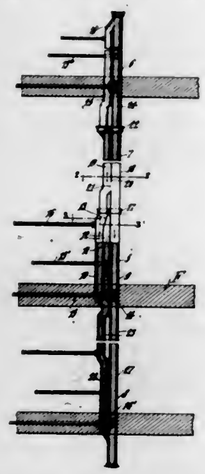
1. A power control for locomotive tenders comprising drive-wheels and axles therefor, means for connecting the drive wheels, one of the axles having fast thereon a gear wheel, a crankshaft, a gear loose on the crank shaft for engagement with the gear on the axle, means for rotating said shaft, a flexible steam-pipe leading from the locomotive to the tender, a cylinder with which said steam-pipe is connected, a spring returnable piston head therefor, a piston rod and link connected thereto, an air-pipe, a



valve in said pipe the spindle of which has a transverse arm to which said link is connected, and means actuated by steam pressure for driving the crank shaft, and for moving the valve in position to admit fluid pressure to means for holding the loose gear on the driven shaft in non-rotatable engagement therewith.

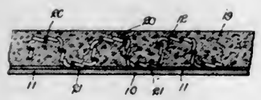
1,510,230. LIGHT FOR CHRISTMAS TREES AND THE LIKE. JOHN JOHNSTON, Chicago, Ill. Filed Jan. 28, 1924. Serial No. 688,952. 6 Claims. (Cl. 240—10.)

1. A light for Christmas trees and the like including a plurality of light sockets secured to a fixed support, conductors connected with the said sockets, additional sockets connected with the said conductors and flexibly suspended thereby from the fixed support and being movable adlibitum with respect to the said support, a plug to which the conductors are connected, and means for securing the said support upon a tree or the like.



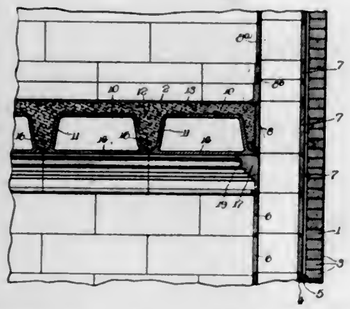
1,510,231. APPARATUS FOR MAKING METALLIC VEHICLE WHEELS. HARRY W. KELLER, Pittsburgh, and ALBERT T. KELLER, Bethlehem, Pa. Filed July 6, 1922. Serial No. 573,206. 6 Claims. (Cl. 22—120.)

1. Apparatus for casting metal wheels having channel shaped fellies with inwardly turned flanges comprising complementary mold members having mating hub, spoke and felly forming cavities, and collapsible sectional cores cooperating with said cavities.



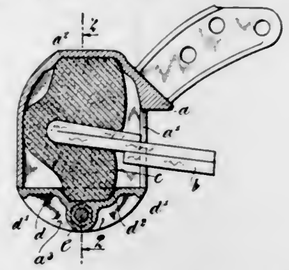
1,510,232. PLUMBING SYSTEM. EDWARD KENNEDY, New York, N. Y. Filed Jan. 16, 1922. Serial No. 529,422. 3 Claims. (Cl. 4—211.)

1. A unit for plumbing systems consisting of parallel waste and vent pipes having no communication with each other and an additional combined waste and vent pipe between the same and formed integral therewith and the upper end of the combined waste and vent pipe drawn inwardly and having an opening communicating with the main vent pipe, the additional combined waste and vent pipe having communications with the waste pipe and



a socket communicating with the main waste pipe and the lower end of the additional vent pipe midway between the same.

1,510,233. PLASTER-RECEIVING BOARD. OWEN D. MCFARLAND, Chicago, Ill., assignor of one-half to Harry A. Cumfer, Chicago, Ill. Filed Dec. 21, 1921. Serial No. 523,875. 2 Claims. (Cl. 72—119.)

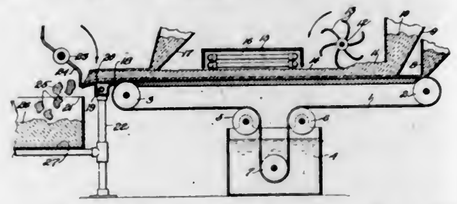


2. An article of manufacture comprising a sheet of expanded metal fabric; an asphalt saturated sheet and a coating of plastic asphalt of uniform thickness between the sheets in which parts of the metal sheet are embedded.

1,510,234. BUILDING CONSTRUCTION. WILLIAM D. MANN, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,954. 5 Claims. (Cl. 72—1.)

1. A building structure composed of hollow wall and floor tile blocks, the exposed portions of the same (comprising the ceiling portion of the floor blocks and both sides of the wall blocks) simulating and having the qualities of the surface appropriate thereto, the blocks being hollow and laid so that one block is provided in the depth of wall or floor.

1,510,235. HOUSING FOR CUSHION CONNECTIONS FOR VEHICLE CONSTRUCTION. ALFRED F. MASURY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,662. 3 Claims. (Cl. 267—30.)

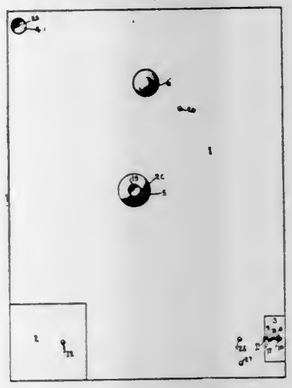


1. As an article of manufacture, a housing for a non-metallic resilient connection between the spring and frame of a motor vehicle having an opening of substantially the entire bottom area, a cap of less area than said opening and disposed within the same above the lower edges of the side walls of the housing and a bolt passing through apertures in the side walls to secure said cap in closing relation with respect of the opening.

1,510,236. FEEDING MECHANISM FOR MATERIAL-TREATING MACHINERY. FREDERICK MAUSSNER, Collingswood, N. J., and ISAAC B. RITTER, Philadelphia, Pa., assignors to Henry Wilhelm Company, Pittsburgh, Pa. Filed July 13, 1921. Serial No. 484,528. 10 Claims. (Cl. 19—155.)

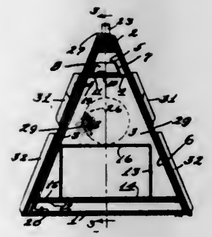
1. A feeding device for a material treating machine comprising an endless belt adapted to feed material towards said machine, top and side walls positioned adjacent to said belt to form a channel for receiving loose material, means for varying the size of the channel in cross-section, and means for filling the channel with loose material throughout a portion of its length to form a column of material adapted to be carried by said endless belt into the said machine.

1,510,237. APPARATUS FOR FORMING SHOE-BOTTOM FILLER. GEORGE H. MAXWELL, Phoenix, Ariz. Filed Sept. 14, 1921. Serial No. 500,711. Renewed Mar. 17, 1924. 12 Claims. (Cl. 18—15.)



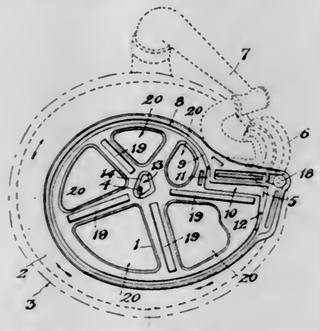
1. The herein described apparatus, comprising a support, means to deposit a thick layer of hot, viscous, granular filler on said support, means to remove the upper portion of said layer without compression to leave a thin layer, provision to cool said thin layer, and means to sever said thin layer into fragments without compression.

1,510,238. SHOE-BOTTOM FILLER AND METHOD OF MAKING SAME. GEORGE H. MAXWELL, Phoenix, Ariz. Original application filed Sept. 14, 1921. Serial No. 500,711. Divided and this application filed Aug. 28, 1922. Serial No. 584,879. 15 Claims. (Cl. 18—48.)



3. The process, consisting of copiously wetting a supporting surface, depositing thereon a thin layer or sheet of filler in a hot, sticky, sluggishly fluid condition, removing the heat from the sheet of filler until the latter is substantially set and coherent, at some stage in the process enveloping said filler in dry comminuted cork-like material, and at some stage in the process when the thin layer is at least partially cooled forming it into small pieces or cakes.

1,510,239. GOLF APPARATUS. OLNEY B. MONOSMITH, Lorain, Ohio. Filed Mar. 17, 1923. Serial No. 625,729. 8 Claims. (Cl. 46—4.)

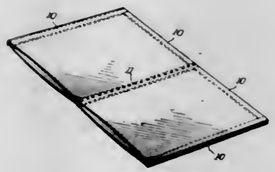


1. In golf apparatus, the combination with means forming a substantially rectangular playing surface; of a tee arranged thereon; a block formed with a target presented to said tee, said target providing a dumping rebound of the ball and the balance of said block providing a vigorous rebound of the ball, said block and said tee being adjacent one end of the playing surface, a cup adjacent the opposite end of the playing surface, and a hazard positioned intermediate said block and cup.

1,510,240. KIT CARRIER. EDWARD D. MYERS, Shelby, Mich. Filed Sept. 19, 1921. Serial No. 501,638. 6 Claims. (Cl. 206—16.)

1. A kit carrier, comprising a casing, a removable flexible covering for the top and sides of said casing, means for removably attaching said covering to said casing with its sides constituting aprons to cover the casing sides, and tool holders on said aprons, said covering operating when in poition to afford ready access to all the tools, and being adapted to be folded for storage within said casing.

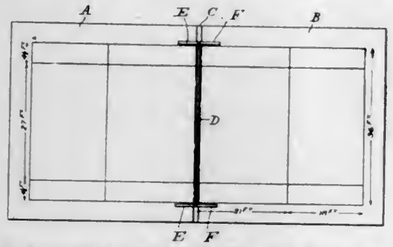
1,510,241. REPEATING DEVICE FOR PHONOGRAPHS. ROBERT W. NICHOLLS, Palisades Park, N. J., assignor to Gold Seal Co., Palisades Park, N. J., a Corporation of New Jersey. Filed Feb. 13, 1922. Serial No. 536,014. 4 Claims. (Cl. 274—15.)



1. A repeating attachment for sound reproducing machines having the usual turn-table with a center pin, a playing stylus and sound record; a disk having therein a triangular opening that is adapted to lie on the record with said opening over the center pin, and an opening, the edge of which engages the stylus to hold the disk stationary during the reproducing operation, a groove in the disk to guide the needle to starting position after said record has been played, a clutch pin extending below the disk and over the edge of the record, which is adapted to be brought into engagement with said edge when the disk is allowed to start in rotation and to be released therefrom when the disk is again arrested by engagement with the stylus.

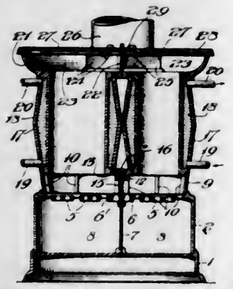
1,510,242. ALLOY AND APPARATUS MADE THEREFROM. ALADAR PACZ, Cleveland Heights, Ohio. Filed June 1, 1920. Serial No. 385,597. 9 Claims. (Cl. 75—1.)

1. A metallic alloy for the purpose described, consisting essentially of copper at least 87%, silicon between 2% and 5% and at least 1% of aluminum.



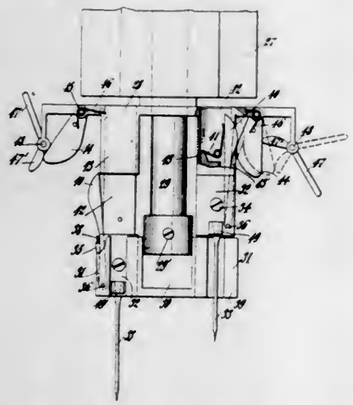
1,510,243. JOINT CONSTRUCTION AND METHOD OF FORMING THE SAME. GROVER PERRY, Chicago, Ill. Filed July 14, 1922. Serial No. 575,066. 9 Claims. (Cl. 154—2.)

3. A method of joining a surface of celluloid to another surface of material along a narrow area which consists in interposing between and securing to said surfaces a narrow strip of celluloid, the strip being secured to the surface of celluloid by the application of a celluloid solvent.



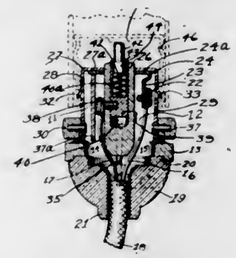
1,510,244. LAWN-TENNIS-INSTRUCTION DEVICE. IDA PLOMER-WALKER, Southsea, England. Filed Jan. 11, 1924. Serial No. 685,496. 3 Claims. (Cl. 46—24.)

3. A lawn tennis instruction device comprising a pair of flat surfaces marked to represent when opened out flat a miniature lawn tennis court and of a suitable finish to receive erasable chalk or the like marks, said surfaces being hinged to fold flatwise together, a transverse member arranged along the hinged junction to represent a lawn tennis net and flexible means connecting said member to each of said flat surfaces to allow the member to lie flat between said surfaces when folded,



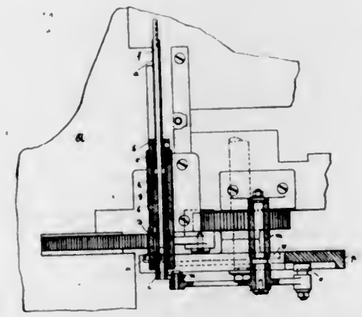
and to automatically erect itself perpendicular to said surfaces when the latter are opened out into the same plane.

1,510,245. COOKING, HEATING, AND COMBINATION HOT-WATER STOVE. SAMUEL V. REEVES, Haddonfield, N. J. Filed Nov. 22, 1922. Serial No. 602,495. 9 Claims. (Cl. 126—5.)



1. A combination stove including a base with an ash pit and a grate, a shallow fire pot ring on the base, fire pots on the ring, a top on the fire pots, means to divide the ash pit, and means to divide the fire pots.

1,510,246. TWO-NEEDLE-SEWING-MACHINE ATTACHMENT. RALPH M. SHARAF, New York, N. Y., assignor to R. M. Sharaf Machine Co., Boston, Mass., a Corporation of Massachusetts. Substitute for applications Serial No. 62,241, filed Nov. 18, 1915, and Serial No. 323,436, filed Sept. 12, 1919. This application filed May 4, 1920. Serial No. 378,809. 12 Claims. (Cl. 112—221.)



1. In a sewing machine of the class set forth, the combination with a sewing machine head and a single needle bar reciprocating therein, of a needle holder secured to the needle bar and having a pair of socket members with open tops, a bracket secured to the head above the holder having a pair of sleeves in vertical alignment with said sockets, a pair of needle chucks carried by the sockets and means associated with the sleeves to release the chucks from the sockets and hold the chucks and needles out of operation, the operation of the needle bar and holder remaining unaffected.

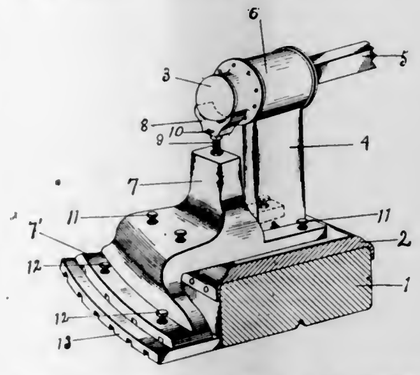
1,510,247. ELECTRIC-SOCKET PLUG. WILLIAM J. SMITH, Waterbury, Conn. Filed May 15, 1922. Serial No. 561,010. 2 Claims. (Cl. 173—360.)

1. In a socket plug for electrically connecting a pair of conducting wires to the terminals of an electric socket having a central terminal and a screw-threaded shell, a spring-pressed pin adapted to engage said central terminal, a shell-contacting member surrounding said pin, said shell-contacting member having a flat base and a pair of parallel disposed resilient arms at right angles to said flat base, each of said resilient arms having an outwardly projecting lug for detachably engaging the screw threads of the socket shell, a connecting ring in electrical contact with said shell-contacting member, and means for connecting said conducting wires to said pin and said ring respectively.

1,510,248. MACHINE FOR FORMING CIGARETTE MOUTHPIECES. FRANZ HEINRICH BENNO STELZER, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik J. C. Müller & Co., Dresden, Germany. Filed Mar. 31, 1921. Serial No. 457,318. 3 Claims. (Cl. 93—80.)

1. In a machine for forming cigarette mouthpieces, a needle sheath, a retaining needle held by friction in said sheath in both its retaining and releasing positions, a finger secured to said needle, a rocking device for engaging said finger to move said needle to one or the other of its positions, and means for turning the needle and for actuating said rocking device whereby the exact operation of the needle is insured.

1,510,249. WINDSHIELD. ALFRED L. THOMPSON, Woodbourne, Pa. Filed Sept. 28, 1920. Serial No. 413,355. 9 Claims. (Cl. 20—40.5.)

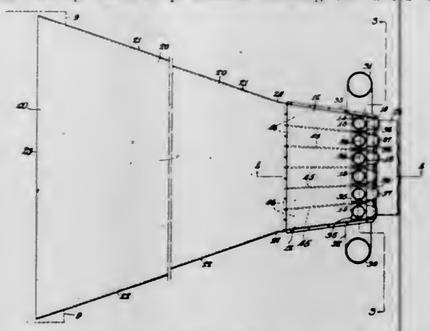


1. An automobile wind shield, combined with a shaft extending through the glass portion of the same, a transparent disc shaped part secured to the shaft in front of the glass of the wind shield, means for supporting and rotating the shaft including a bearing for the shaft independent of and arranged wholly to the rear of the glass of the windshield.

1,510,250. PROCESS OF DYEING OPALESCENT AND FLUORESCENT EFFECTS ON WOOL AND FUR FELT. JACOB K. VON GAL, Danbury, Conn. Filed Nov. 2, 1922. Serial No. 598,669. 5 Claims. (Cl. 8—5.)

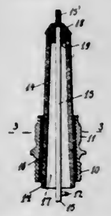
1. The process of treating felt which consists in dyeing the felt a given color, then dyeing the surface another color, and then cutting or breaking the surface so that the colors mingle.

1,510,251. AUTOMOBILE TREAD. SAMUEL THOMAS WALKUP, New York, N. Y. Filed Oct. 20, 1921. Serial No. 509,121. 3 Claims. (Cl. 301—44.)



1. The combination with a wheel, of a tread-widening member rigidly and removably fixed to the wheel by frictional engagement with both the hub and rim and having a laterally projecting portion alongside the tread and extending through a large fraction of the tread's annular extent, there being no positive engagement of said member with either hub or rim; whereby the wheel may at will be provided with an unusually extensive traction and bearing surface.

1,510,252. PNEUMATIC FEEDING MECHANISM. EDWIN G. WILHELM, Pittsburgh, Pa., assignor to Henry Wilhelm Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 26, 1921. Serial No. 487,697. 8 Claims. (Cl. 19—73.)



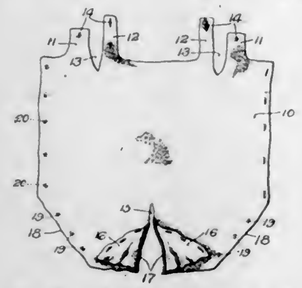
2. A feeding device for a material treating machine comprising a delivery tube having its outlet positioned adjacent to the receiving end of said machine and coextensive in width with the width of the receiving end of said machine, said tube having flaring side walls

making the inlet end of the tube narrower than the outlet end, said tube having a passageway formed in the inlet end thereof for the entrance of loose material, a casing located at the inlet end of said tube, said casing having vertical partitions forming air ducts com-

municating with said tube, said partitions being positioned a greater distance apart at their outlet ends than at their inlet ends adapted to direct air into the inlet end of said tube and force the material divergently throughout the width of the tube, and means for regulating the flow of air through said ducts.

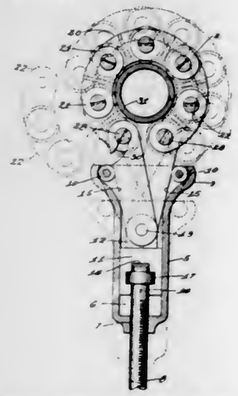
1,510,253. SPARK PLUG. OSCAR A. BOEHM, New York, N. Y. Filed Nov. 24, 1920. Serial No. 426,242. 1 Claim. (Cl. 123—169.)

A spark plug comprising a tubular body adapted for connection with a support and having an outwardly tapering inner surface provided with longitudinal ribs, a tubular carrier closed at its outer end and open at its inner end, said carrier being set within said body and having a tapered outer surface corresponding to the tapered inner surface of said body, and an electrode extending through said carrier and supported thereby.



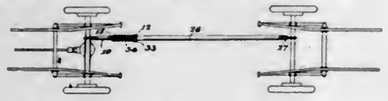
1,510,254. PLIERS. JOHN O. BOYLE, Youngwood, Pa. Filed June 25, 1923. Serial No. 647,700. 2 Claims. (Cl. 294—35.)

1. A pair of pliers including arms movable toward and away from each other, said arms including terminal elements having their inner faces concaved both longitudinally and transversely, said terminal elements being provided in their inner faces with grooves of angular cross-section.



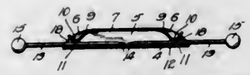
1,510,255. CHANGE-QUICK UNDERWEAR. ROSCOE BRATTON, Lebanon, Ind. Filed Feb. 5, 1923. Serial No. 616,975. 1 Claim. (Cl. 2—78.)

An under garment comprising a polygonal sheet having a central slit extending inwardly from the lower edge thereof to provide leg portions, the outer corners of said lower edge being angularly cut away, and separate triangular portions secured to the edges of said slit to fold about the legs of the wearer and to bring the free edges of said triangular portions into registration re-



spectively with the cut-away portions at the corners of said sheet along lines at the front and outer sides of the legs of the wearer.

1,510,256. PIPE CUTTER. JAMES CONNING, Chicago, Ill. Filed Jan. 14, 1924. Serial No. 686,015. 1 Claim. (Cl. 81—191.)

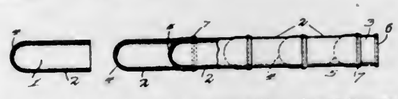


In a pipe cutter, the combination with a body having an elongated cavity flared at one of its ends, of a pair of spaced rollers transversely journaled in the flared end of said body, a block slidably mounted in said body, means connected to said block and extended therefrom through the end of said body opposite its rollers for reciprocating the block, a plurality of clamping links or toggles pivotally connected in pairs on a common pivot at one of their ends to said block, said pairs of links extending divergently between said rollers, the members of one pair of said clamping links each having a substantially diagonally disposed slot in its outer portion, said slots registering with one another, a linked element pivotally connected at one of its ends to the outer portion of the other pair of clamping links and having means at its other end to detachably engage said slot, and a plurality of disk cutters transversely journaled on the linked element in spaced relation to one another.

1,510,257. DEVICE FOR TOWING AUTOMOBILES. JOHN W. CRIBBINS, Derby, Conn. Filed Oct. 24, 1923. Serial No. 670,458. 4 Claims. (Cl. 280—33.9.)

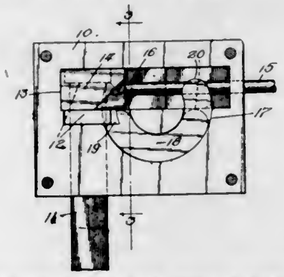
1. In a towing device for connecting two vehicles, a tubular member connected to one vehicle, a plunger member telescoped within said tubular member and connected to the other vehicle, a spiral spring surrounding said tubular member, said plunger member having a longitudinal slot near its end, a key fitted into said slot to engage the spring when the device is under tension and a lug on said tube to engage the spring when the device is under compression.

1,510,258. FASTENER FOR SOFT-COLLAR POINTS. JAN CRNOEV, St. Louis, Mo. Filed Nov. 19, 1923. Serial No. 675,534. 6 Claims. (Cl. 24—87.)



4. In a soft collar point fastener structure, a four walled tubular member, a resilient lip disposed at each end of one of the walls of said member and integral at their inner ends therewith, a curved pin embracing section formed at the outer end of each resilient lip and each of said curved pin embracing sections adapted to frictionally engage a pin held in contact with the wall of the fastener opposite said embracing sections.

1,510,259. MEDICINAL PREPARATION AND PROCESS OF MAKING THE SAME. LLOYD W. CYRENIUS, New York, N. Y. Filed Oct. 30, 1919. Serial No. 334,417. 7 Claims. (Cl. 167—7.)

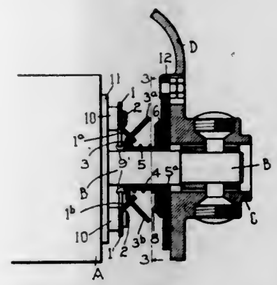


1. The process of making a medicament for the treatment of diseases, consisting in mixing a water soluble mercury compound with a local anæsthetic, and a soft fat, then emulsifying a water soluble compound with a solvent and a hard fat, and then emulsifying the emulsion with the mixture.

1,510,260. CAPSULE. LLOYD W. CYRENIUS, New York, N. Y. Filed June 30, 1921. Serial No. 481,684. 3 Claims. (Cl. 206—47.)

1. A package containing a plurality of gelatinous hollow bodies, each closed at one end and having an enlarged diameter at its open end extending for a portion of the length of the hollow body, said hollow bodies being nested in series with the closed ends of the bodies fitting in the enlarged open ends of adjacent bodies to close the bodies throughout the series, and a closure member for the last body of the series.

1,510,261. PUNCH HEAD. EDWIN G. DANIELS, Chicago, Ill., assignor to Chicago Bridge & Iron Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1923. Serial No. 673,342. 9 Claims. (Cl. 164—104.)

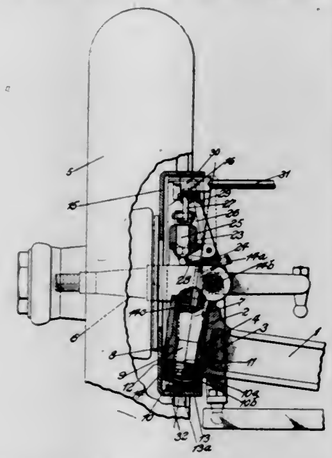


1. A punch-head carrying a punch adapted for vertical movement therein, a gag block adapted to be moved to locking position to lock the punch in its lower position against vertical movement in the punch-head and adapted to be moved to unlocking position to permit vertical movement in the punch-head, and means whereby movement of said gag block to a position beyond its unlocking position operates to raise the punch to its uppermost position in the punch-head and there support the same.

1,510,262. HATCHET PICK. WALLACE CLYDE DAVIS, Lincoln, Nebr., assignor to The L. D. Caulk Company, Milford, Del., a Corporation of Delaware. Filed Jan. 11, 1923. Serial No. 612,057. 2 Claims. (Cl. 32—10.)

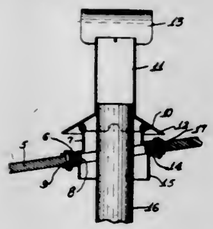
1. A hatchet pick for operating in root canals comprising a rectilinear shank having a chopping blade at one end, said shank being of unconstricted cross sectional area from the point of manipulation to said chopping blade.

1,510,263. CENTRIFUGAL STARTING SWITCH. MARK A. DEFIBAUGH and RALPH J. THIEMAN, Battle Creek, Mich., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a Corporation of Michigan. Filed Nov. 28, 1921. Serial No. 518,248. 17 Claims. (Cl. 200—80.)



1. In a centrifugal starting switch, an insulated contact carrier, a rotatable member, radially movable weights on said member, and oppositely inclined intersecting arms on the carrier and weights whereby said carrier is moved in an axial direction by and in proportion to the radial movement of the weights.

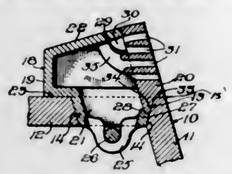
1,510,264. STEERING-WHEEL BRAKE FOR AUTOMOBILES. GEORGE P. DORRIS, St. Louis, Mo. Filed Mar. 12, 1923. Serial No. 624,382. 17 Claims. (Cl. 188—194.)



5. In an automobile, a swiveled steering knuckle, a lubricant containing cup for supplying lubricant to the

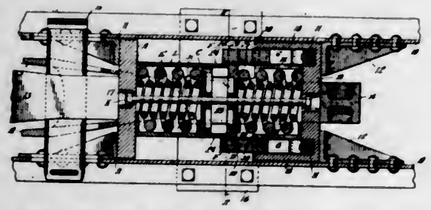
steering knuckle, a wheel rotative on the steering knuckle, a drum rigid with said wheel, a brake band within said drum engaged by said cup and thereby retained within said drum, other elements cooperating with said cup to retain the band within the drum, springs for contracting

the band, a thrust member slidably supported by the steering knuckle, links connecting said thrust member with said band, and a bell crank lever pivotally supported by the said steering knuckle for operating said thrust member to expand the band.



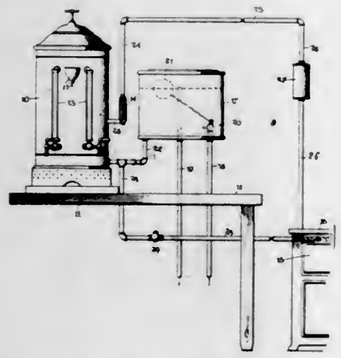
1,510,265. CAR CHIMNEY. ARTHUR J. FILKINS, Riverside, Ill. Filed Feb. 14, 1923. Serial No. 618,905. 3 Claims. (Cl. 126—317.)

1. The combination with a car roof of a metal chimney adapted to be secured to the outside of said roof and having a collar passing downwardly through the roof opening for receiving a stove pipe and maintaining the same in spaced relation with respect to said opening, a protector for the inner surface of said opening including a metal flanged collar having the flange adapted for contacting a collar on the chimney, and means passing through the flanged portion of said second member and said chimney for fastening the same in position, said protector having a collar portion extending downwardly from the roof a short distance and positioned eccentrically with the axis of the chimney.



1,510,266. TUYÈRE BLOCK. FRANK E. FLEMING, Detroit, Mich., assignor to The Underfeed Stoker Company of America, Detroit, Mich., a Corporation of New Jersey. Filed Jan. 10, 1921. Serial No. 436,168. 3 Claims. (Cl. 110—75.)

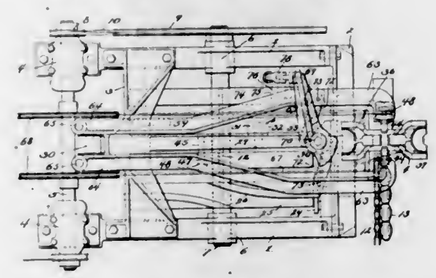
1. As an article of manufacture, a tuyère-block comprising a body portion having in an integral structure top, rear, and end walls and a base portion providing a front-bar, the front surfaces of said top, rear and end walls lying in a plane, and the top surface of said front-bar extending forwardly beyond said plane at an abrupt angle thereto; and an apertured front plate shaped at its side and top margins of its rear face to lie against the front surfaces of said side and end walls of the body, and



shaped at its bottom edge to rest upon the top surface of said front bar, whereby to cover the open front face of the body and to be placeable and removable from the front.

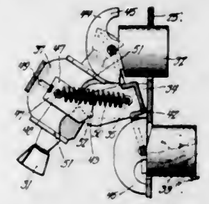
1,510,267. SHOCK-ABSORBING MECHANISM. WILLIAM A. GEIGER, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 12, 1921. Serial No. 514,436. 8 Claims. (Cl. 213—22.)

1. In a shock absorbing mechanism, the combination with tandem arranged springs, of tandem arranged front main and rear intermediate followers and means for maintaining them at a uniform distance apart, tandem arranged front intermediate and rear main followers and means for maintaining them at a uniform distance apart; and friction devices acting independently of said tandem arranged springs, said devices being interposed between one of the main followers and the correspondingly designated intermediate follower, one of said last named followers being provided with walls having friction faces thereon coacting with said devices.



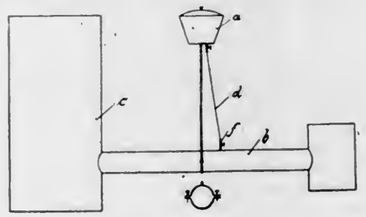
1,510,268. COFFEE-URN-HEATING DEVICE. VICTOR A. GHILSTROM and EUGENE E. LAVALLEUR, Salem, Oreg. Filed Aug. 22, 1923. Serial No. 658,790. 2 Claims. (Cl. 126—366.)

2. In a heating system of the character described, a receptacle having an overflow, a water supply tank, a supply pipe connecting said tank with said receptacle, a float valve in said tank adapted to maintain the water therein at a point below said overflow, a pipe line leading from said supply pipe to a heating element, a one way valve in said pipe line permitting water to flow only from said supply pipe to said element, and a return steam pipe



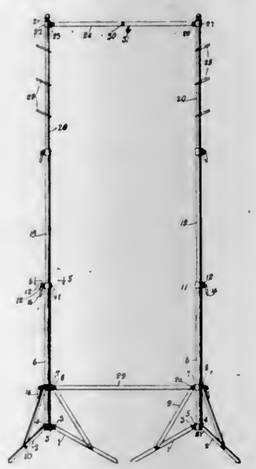
leading from said element to said receptacle, said return pipe having a portion thereof positioned above the water level of said tank and receptacle.

1,510,269. NUT-SHELLING MACHINE. RALPH A. GLEASON, Baltimore, Md. Filed Nov. 8, 1922. Serial No. 599,692. 36 Claims. (Cl. 146—12.)



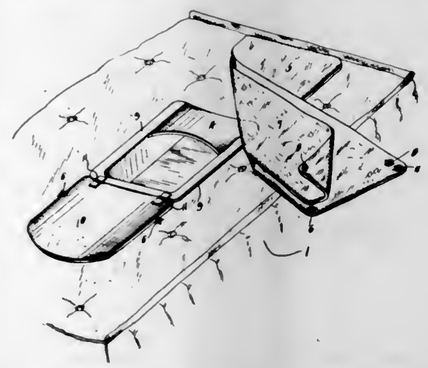
1. A nut shelling machine comprising, in combination, means for cutting grooves around the transverse circumference adjacent to the respective ends of a nut, and means for applying a sustained cracking pressure to the body portion of the shell.

1,510,270. SWITCH MECHANISM. DAVID D. GORDON, Chicago, Ill., assignor to Stackhouse & Allen, Chicago, Ill., a Partnership consisting of John H. Stackhouse and John R. Allen. Filed Apr. 11, 1921. Serial No. 460,283. 11 Claims. (Cl. 200—72.)



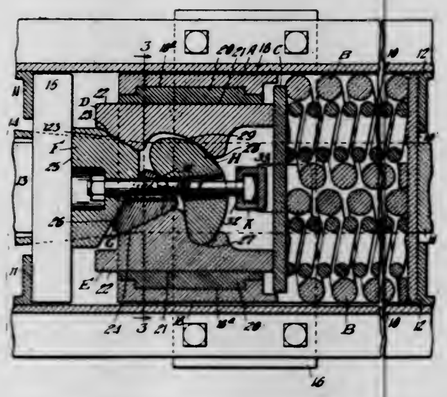
1. A device of the character described comprising a pivoted control member, a pivoted switch operating member, and means interposed between said control member and said switch operating member for controlling the snap action movement of said switch operating member in both directions when said control member is moved, said means including a spring and a shifting element pivotally and shiftably associated with said switch operating member.

1,510,271. BLAST OF CUPOLA FURNACES AND BLAST FURNACES. MATHIAS GOTTSCHALK, Niederau, near Duren, Germany, assignor to the Firm Vulkan-Werk Reinshagen & Co., Niederau, near Duren, Germany. Filed Aug. 3, 1921. Serial No. 489,494. 1 Claim. (Cl. 266—29.)



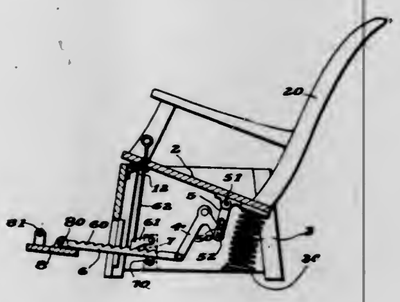
A process of supplying water to cupola and blast furnaces, which consists in supplying water by an air supply into the air current blast and then delivering the water in the form of water directly into the furnace prior to its vaporization.

1,510,272. COLLAPSIBLE CLOTHESRACK. CHARLES B. HARMOUNT, Middletown, Ohio, assignor of one-half to Morris W. Renick, Middletown, Ohio. Filed Oct. 22, 1923. Serial No. 670,015. 6 Claims. (Cl. 45—13.)



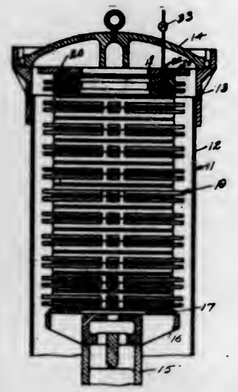
1. In a clothes rack, a main tube, a plurality of legs pivoted thereto, a sliding collar on said tube a plurality of braces pivoted to said legs and to said sliding collar, a split collar mounted on the top of said tube adjacent a split in said tube end, a handle mounted on said split collar and having jaws with cam surfaces on their inner adjacent faces adapted to receive between them ears on said collar for moving said ears toward one another and collapsing the collar and tube, and a second tube telescoping within the first tube, adapted to be locked or unlocked therein according to the position of the handle.

1,510,273. COMBINED BEDPAN AND MATTRESS. AGUSTA M. HARPER, Safford, Ariz. Filed May 8, 1923. Serial No. 637,609. 1 Claim. (Cl. 5—91.)



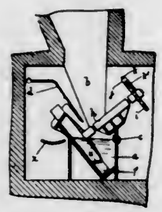
A mattress having an opening formed therein to receive a pan or a block, a flap adapted to extend over and cover the opening and attached at one edge to the mattress and adapted to be detachably attached at points in its length to the mattress, and a sanitary pad detachably connected to the underside of the flap.

1,510,274. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 8, 1922. Serial No. 599,639. 10 Claims. (Cl. 213—34.)



1. In a friction shock absorbing mechanism, the combination with a friction shell having opposed interior friction surfaces; of a spring resistance; opposed friction shoes cooperable with the shell; pressure receiving and transmitting spreading means, said shoes and means having a plurality of sets of faces inclined relatively to the axis of the mechanism, part of which are arranged at a relatively keen wedge-acting angle and others at a relatively blunt releasing angle, and auxiliary spreading means between and having direct engagement with said opposed friction shoes, said auxiliary spreading means having also engagement with and receiving pressure from said first named spreading means, and having its movement inwardly of the shell directly opposed by contact with said shoes.

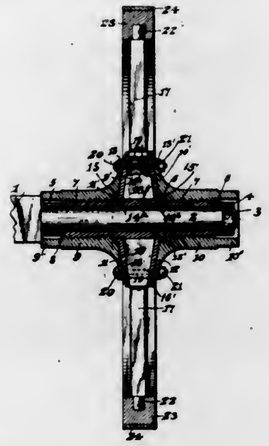
1,510,275. EASY CHAIR. PERHAM F. HEARSCH, Seattle, Wash. Filed Apr. 2, 1923. Serial No. 629,246. 2 Claims. (Cl. 155—55.)



1. A chair having a back and seat swinging about an axis located near the front edge of the seat, springs holding the seat raised, a rod mounted in the base for reciprocation from front to rear, means connecting said rod with the seat to lower it, and a board pivoted upon said rod to normally form a section of the front of the chair base, said board having upon its inner face a raised bar adapted when the board is swung down to be engaged by the feet to thereby pull down the seat.

1,510,276. VULCANIZING APPARATUS. DANIEL EDWARD HENNESSY, Milwaukee, Wis. Filed Aug. 19, 1921, Serial No. 493,592. Renewed Feb. 27, 1924. 17 Claims. (Cl. 18—38.)

1. A mold provided with a system of vents and ducts so arranged that said vents open through interconnected regions on the faces of the mold.

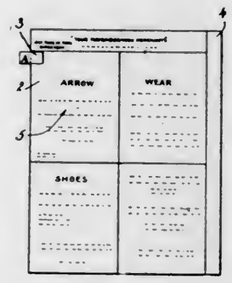


1,510,277. APPARATUS FOR REMOVING ASHES AND CLINKERS FALLING FROM THE GRATES OF BOILERS OR OTHER FURNACES. ALBERT HOSSACK, Johannesburg, Transvaal, South Africa, assignor of one-half to The Victoria Falls and Transvaal Power Company Limited, Johannesburg, Transvaal, South Africa. Filed Jan. 12, 1922. Serial No. 528,731. 2 Claims. (Cl. 110—165.)

2. Apparatus for removing ashes comprising a tank adapted to be partly filled with water and adapted for disposition under an ash hopper, one side of said tank being inclined and extending above the level of the water; a bearing secured to the side of the tank opposite to said inclined side, said bearing being entirely above the level of the water in the tank; a paddle wheel having a shaft journaled in said bearing, said wheel being adjacent to and its plane of rotation being parallel to said inclined side; and means for operating said wheel to remove the ash from the tank over the edge of the inclined side.

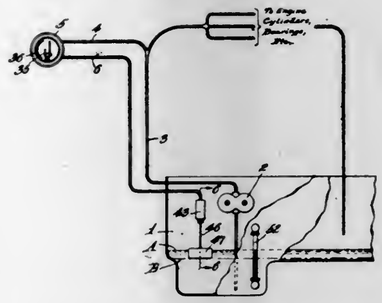
1,510,278. HUB CONSTRUCTION. WILLIAM HOVEY, Rollingdam Station, New Brunswick, Canada. Filed Dec. 26, 1923. Serial No. 682,750. 2 Claims. (Cl. 301—85.)

1. In a wheel of the character described, an axle box, spokes having their inner ends abutting said axle box and further being flared laterally at these ends, substantially concavo-convex plate members having a central aperture therethrough and further having an annular flange concentric with said aperture and upon the convex side of said plate, said apertures being traversed by said box, and the concave sides of said plate engaging the flared sides of said spokes, sleeve hub members



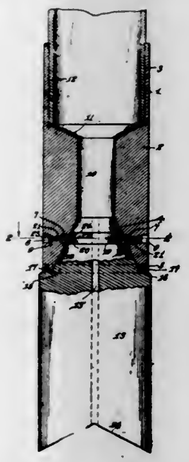
threaded upon said box one on the outside of and engaging each plate, and means for securing the parts together.

1,510,279. BAKE PAN. LLOYD R. HUTH and DAVID E. AHLERS, Carlisle, Pa., assignors of one-third to Emmett R. Woods, Carlisle, Pa. Filed Sept. 11, 1923. Serial No. 662,117. 3 Claims. (Cl. 53—6.)



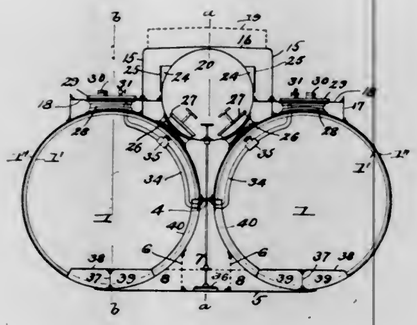
3. A bake pan comprising a receptacle and spaced core units, means carried by the receptacle for retaining run over portions from the interval between the units and the receptacle, and means carried by the core units for producing perforations in said run over portion.

1,510,280. ADVERTISING DEVICE. JOSEPH ALLISON JANNEY, Elizabeth, N. J. Filed June 9, 1922. Serial No. 566,975. 2 Claims. (Cl. 283—36.)



1. A device of the class described for use with alphabetically indexed directories, comprising a plurality of sheets of substantially the size of the leaves of the directory and adapted to be intercalated between these leaves, each sheet having an index tag projecting from the margin thereof, and each sheet having printed thereon a selection of representative names of persons and business establishments of different classes within a restricted area or zone representing a part only of the total area covered by the directory.

1,510,281. INDICATING DEVICE FOR INTERNAL-COMBUSTION ENGINES. STEPHEN JENCICK, Cleveland, Ohio, assignor to Gustavus A. Schanze, Cleveland, Ohio. Filed Aug. 30, 1919. Serial No. 320,958. 16 Claims. (Cl. 184—6.)

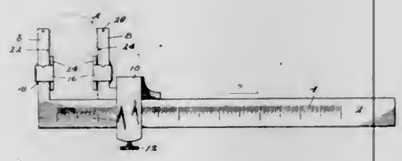


7. The combination with a motor of a motor vehicle, of the usual oil circulating system therefor, a pressure indicator for said system, and means additional to said system and arranged when the oil level therein becomes dangerously low to trap oil at said indicator and cause the same to become inoperative, thereby indicating approaching low oil level.

1,510,282. DRILL. WILLIAM S. JOHNSON, Electra, Tex. Filed Feb. 20, 1923. Serial No. 620,250. 4 Claims. (Cl. 255—64.)

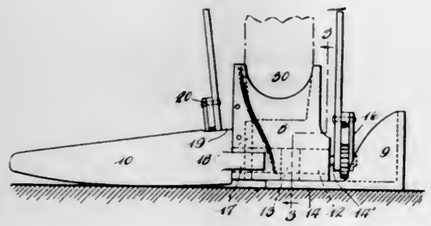
1. A drill comprising a collar having a conoidal-shaped socket at its lower end, a bit element provided with a tang extended into said socket and formed with a peripheral groove having one of the walls thereof outwardly inclined, and transversely extending clamping elements threadingly engaging with said collar and provided with beveled clamping heads binding against said wall for detachably connecting the bit element with the collar.

1,510,283. SUBMARINE OR SUBMERSIBLE BOAT. SIMON LAKE, Milford, Conn. Filed July 7, 1917. Serial No. 179,183. 15 Claims. (Cl. 114—16.)



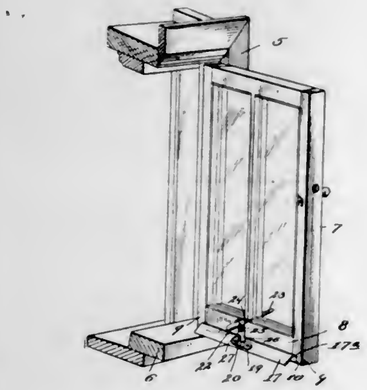
1. In a submarine or submersible boat, a plurality of hull sections having a plurality of oil carrying tanks or compartments, a control compartment arranged above and connected to said hull sections and communicating therewith, and means operable from within said control compartment for governing the contents of said tanks or compartments.

1,510,284. PROCESS FOR MAKING DECOLORIZING CARBON FROM PEAT. JOHN WOOD LEADBEATER, Doncaster, England. Filed May 12, 1919. Serial No. 296,665. 1 Claim. (Cl. 252—3.)



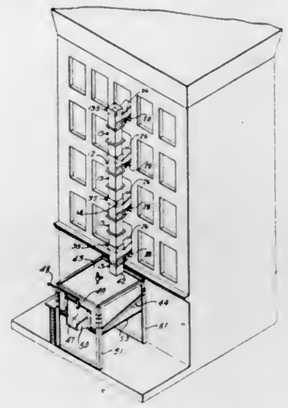
The herein described method of preparing a material for decolorizing sugar solutions, and oil comprising drying finely divided peat, mixing the dried and finely divided peat with finely divided caustic lime, heating said mixture to carbonize the peat therein, treating the residual carbon with an inorganic acid to remove ash and foreign substances therefrom, combining the cleaned carbon with an infusorial earth, and finally heating and drying the mixed materials.

1,510,285. CALIPERS. WILLIAM F. LUSTENBERGER, St. Joseph, Mo. Filed Mar. 19, 1923. Serial No. 626,048. 1 Claim. (Cl. 33—143.)



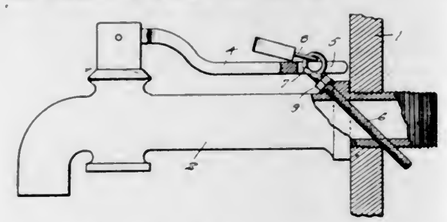
In a tool of the character described an elongated member, a main leg having a measuring surface and fixed to said member, another main leg slidable on said member, supplemental legs having measuring surfaces and adjustable longitudinally on said main legs and shorter than the same, so that said supplemental legs may be slid inwardly towards the elongated member when outside dimensions are to be taken with the main legs or slid outwardly when inside dimensions are to be taken, slides for holding the supplemental legs in slidable position on the main legs, frictional spring-means coacting with said slides in holding the supplemental legs in any of their adjusted positions, and means at the outer ends of the main legs to coact with the slides in preventing removal of the supplemental legs from the main legs.

1,510,286. LAST. JOSEPH MCMONAGLE, Cleveland Heights, Ohio. Filed Sept. 15, 1923. Serial No. 662,895. 5 Claims. (Cl. 12—124.)



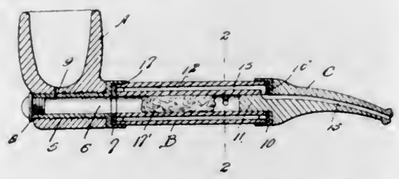
2. An adjustable last, comprising an independent body portion having an undercut way formed longitudinally of its lower face, a screw arranged in the way, a heel portion, an upstanding lug carried by the heel portion and movable longitudinally and guided within said way with rotation of the screw whereby to lengthen the last, an expansible sole portion arranged upon the body portion.

1,510,287. CASEMENT-WINDOW ATTACHMENT. THOMAS E. MACK and ARTHUR E. ALLEN, Los Angeles, Calif. Filed Apr. 12, 1924. Serial No. 706,146. 3 Claims. (Cl. 20—65.)



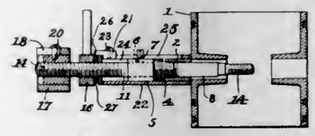
1. A casement window attachment of the class specified, comprising a weather strip plate, a hinge plate to which the weather strip plate is attached at its upper edge, a rigid link connected to the central outer portion of the weather strip plate, a crank shaft having an outer crank pivotally connected to the upper extremity of the link and having an operating means secured to the inner extremity thereof, and a bearing sleeve for the crank shaft, the hinge plate being attachable to the lower edge of a casement window sash and the bearing sleeve and crank shaft adapted to be inserted through the lower portion of the said sash at one side of the vertical center of the latter.

1,510,288. CHUTE OR SLUICEWAY. JOHN CLARK MALONE, New York, N. Y. Filed Mar. 17, 1924. Serial No. 699,887. 7 Claims. (Cl. 193—34.)



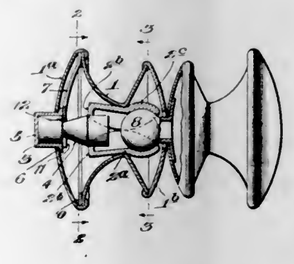
1. The combination with a building having floors and provided with openings to each floor, of a chute comprising a number of units, each unit detachably supported by a floor of the building, means providing telescopic connections between the units.

1,510,289. BUNG AND FAUCET LOCK. HOMER S. MARSH, Tracy, Iowa. Filed Mar. 27, 1924. Serial No. 702,454. 3 Claims. (Cl. 251—6.)



1. Locking means for a liquid dispensing fixture, the same comprising a pivoted handle, a threaded stem adapted to engage the handle, and a lock for securing the handle to the stem.

1,510,290. SMOKING PIPE. NUMA E. MORGAN, Atlanta, Ga. Filed Jan. 11, 1923. Serial No. 611,917. 2 Claims. (Cl. 131—12.)

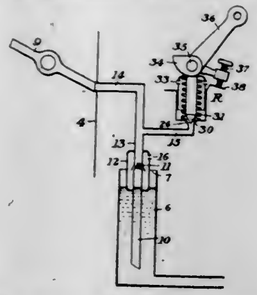


1. A smoking pipe including a stem formed with a central bore extending longitudinally throughout the stem, and a plurality of small bores extending longitudinally thru the stem and arranged in concentric relation with the central bore having communication therewith and with each other to provide a continuous passage through the central bore and to the radial bores and successively therethrough back to the central bore, the points of communication between the central bore and the concentric bores being spaced apart, a mouth piece for engagement with one end of the stem having a plug slidably fitting the central bore and formed with a passage to communicate with one of the passages from the central bore to the small concentric bores, and a bowl adapted for engagement over the other end of the stem having a passage communicating with the central bore of the stem formed to close the ends of the small longitudinal concentrically arranged bores except for inter-communication between said bores.

1,510,291. BUSHING EXTRACTOR AND INSERTER. ALBERT D. ALEXANDER, Fredericksburg, Va. Filed May 29, 1922. Serial No. 564,426. 7 Claims. (Cl. 29—88.2.)

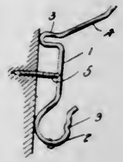
1. A bushing extractor and inserter, comprising a main spindle, a bushing-engaging tube to receive the same, a handle to operate the spindle and tube, and means for locking the handle to the spindle.

1,510,292. BUTTON. EDWARD L. ANDERSON, Attleboro, Mass., assignor to R. & G. Company, Attleboro, Mass. Filed Mar. 20, 1924. Serial No. 700,522. 7 Claims. (Cl. 24—110.)



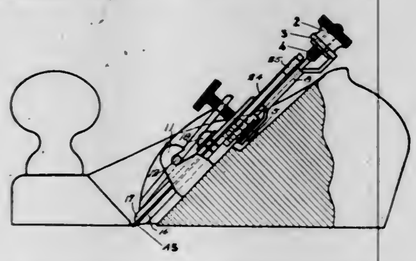
1. In a button, a male member having a head, a female member having a centrally contracted shank and a finishing top, independent jaws having peripheral reduced portions intermediate their ends to receive said contracted part of the shank so as to be pivotally supported thereby, said jaws being formed at one end to grip the head of the male member and having their opposite ends inturned, a slidable pin having a tapered part and a head, the inturned jaw ends receiving the pin and its tapered part therebetween, a cap on the pin extending through said top of the female member and having a flanged base interiorly of said member to limit outward movement of the pin, and an open spring having a rim clamped between the shank and top of the female member and having a pair of spaced arms extending into its center and receiving the tapered part of the pin to normally urge the latter outwardly and thereby positively hold the jaws in latching position.

1,510,293. CARBURETOR. FRANÇOIS BAVEREY, Lyon, France, assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Sept. 24, 1920. Serial No. 412,428. 2 Claims. (Cl. 261—41.)



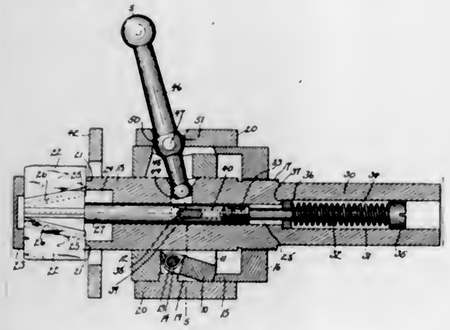
1. In a carburetor, a constant level chamber, a suction pipe having a fuel nozzle therein communicating with said chamber, a throttle valve in said pipe, an atmospheric well open to the atmosphere, a conduit extending from the well and opening into the suction pipe adjacent the throttle and constituting a slow speed feed device, means for feeding an emulsion of the fuel and air from the well to the conduit, regulable means set

in an open position for determining the maximum supply of air to the conduit, and means for temporarily



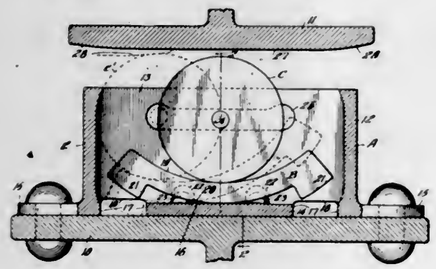
decreasing the supply of air to the conduit without effecting the air supply to the well, substantially as described.

1,510,294. COMBINED KEY GUARD, CLOTHES HOOK, AND TOWEL RACK. NAPOLEON A. BERTRAND, Pittsfield, Mass. Filed Dec. 7, 1922. Serial No. 605,446. 1 Claim. (Cl. 248—27.)



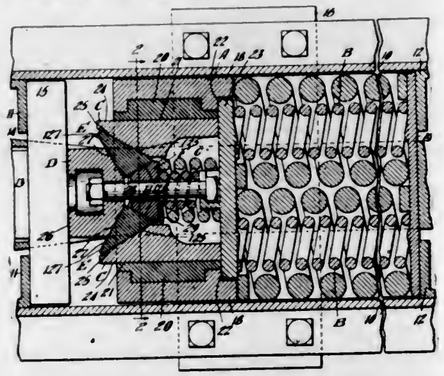
A device of the character specified consisting of a single strand having a substantially straight portion, a loop disposed at substantially a right angle thereto, an upwardly and outwardly inclined portion extending from the loop at the opposite side to the straight portion and a hook at the end of the straight portion opposite to the loop with the axis of which the straight portion is substantially aligned, and said loop and hook touching a plane common to them and substantially parallel to the straight portion.

1,510,295. HAND PLANE. YRJÖ AUGUST BRANDER and GEORG S. GYLLENBERG, Tampere, Finland. Filed Dec. 29, 1923. Serial No. 683,421. 5 Claims. (Cl. 145—11.)



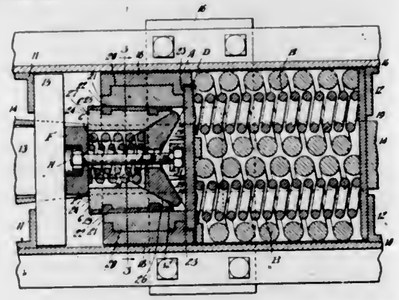
1. In a hand plane, the combination of connected upper and lower blade-supporting elements; a movable blade-holding device interposed therebetween; a blade in said device; a lever pivoted to one of said plates for lateral swinging movement; a rotatable nut loosely connected to said lever; and an operating bar for the holding device connected both to the same and to said lever and said nut, to selectively move sidewise with the lever during the swinging movement thereof or endwise relatively to said lever when the nut is rotated, said bar carrying the holding device with it during both such movements.

1,510,296. COLLAPSING TAP. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed May 8, 1923. Serial No. 637,493. 4 Claims. (Cl. 10—145.)



3. In a collapsing tap, the combination with the body, chasers, plunger and collapsing-spring thereof, of a pawl-carrying ring having sliding movement upon the said body and coupled with the plunger for movement therewith, an operating-sleeve having sliding movement upon the pawl-carrying ring, an adjustable pawl-abutment ring mounted upon the body, a pawl mounted in the pawl-carrying ring to swing in a plane parallel with the longitudinal axis of the tap and co-acting with the said pawl-abutment ring for holding the said chasers in their cutting-positions, an adjustable tripping-plate carried by the operating-sleeve and interposed between the same and the forward ends of the chasers, and a hand-operated lever mounted in the operating-sleeve and engaging with the said body for sliding the said sleeve and the pawl-carrying ring with respect thereto.

1,510,297. ANTIFRICTION BEARING. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 10, 1921. Serial No. 521,311. 2 Claims. (Cl. 64—64.)

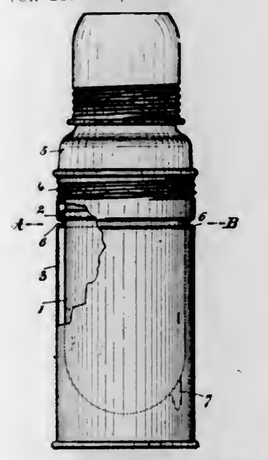


1. In a side bearing for railway cars adapted to be interposed between a body bolster and a truck bolster, the combination with a hollow base casting adapted to be secured to the truck bolster and provided on the interior thereof with a horizontally extending bearing surface; of a rocker bearing plate mounted on said bearing surface of the base casting, said rocker bearing plate having upper and lower arcuate bearing surfaces; means limiting the tilting movements of said rocker bearing plate to prevent the end portions thereof assuming a position on a level with the central portion of the bearing plate when the latter is in normal position; and an anti-friction roller adapted to roll back and forth on the upper bearing surface of said plate and to be elevated thereon when the roller is moved to extreme position, the body bolster being provided with a bearing surface cooperable with said roller, said body bolster bearing surface being upwardly inclined at its ends to compensate for the elevation of the roller when the latter is moved to extreme positions in the base casting.

1,510,298. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 2, 1922. Serial No. 598,520. 7 Claims. (Cl. 213—34.)

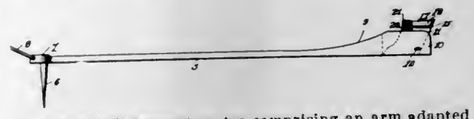
1. In a friction shock absorbing mechanism, the combination with a friction member having longitudinally extending friction surfaces; of friction shoes cooperable with said surfaces and having wedge faces extending at a keen angle with respect to the line of applied forces; a main spring resistance for said shoes; a pressure-receiving and transmitting block having faces inclined at a blunt releasing angle with respect to the line of applied forces; wedges interposed between said releasing angle faces of the block and the keen angle wedge faces of the shoes and cooperable therewith, said wedges having other wedge faces extending at a keen angle with respect to the line of applied forces; wedging means cooperable with the last named faces of said wedges; and secondary spring means cooperable with said wedging means to maintain the latter in contact with said wedges.

1,510,299. FRICTION SHOCK-ABSORBING MECHANISM. ARILD M. BRENNE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 22, 1922. Serial No. 608,402. 7 Claims. (Cl. 213—32.)



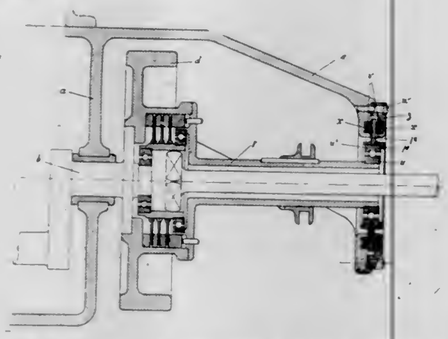
1. In a friction shock absorbing mechanism, the combination with a friction shell having interior opposed friction surfaces; of a main spring resistance; pressure-receiving and transmitting friction shoes cooperable with the friction surfaces of the shell, said shoes, at their inner ends, having wedge faces diverging inwardly of the shell and extending at a keen wedging angle with respect to the axis thereof; a spring follower; wedge elements interposed between said follower and the wedge faces of said shoes and cooperable with both; and spring means co-acting with said wedge elements normally tending to force the latter outwardly of the shoes.

1,510,300. SWIVEL CASTER. OTTO BRINTZENHOFE, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Oct. 11, 1923. Serial No. 667,851. 4 Claims. (Cl. 16—18.)



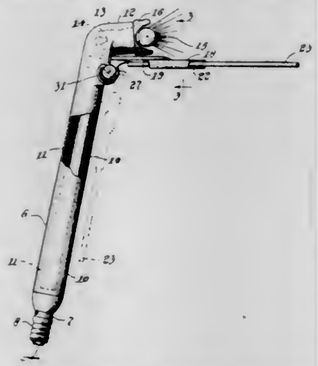
1. In a caster, the combination of a wheel, a supporting fork therefor, a spindle, a bearing sleeve for the spindle, and a bracket for the sleeve comprising a pair of members which are spaced apart at one end to embrace the sleeve and are in interlocked relation at the other.

1,510,301. VACUUM-INSULATED BOTTLE. HEINRICH LOUIS OTTO BRÜCKNER, Grenzhammer, near Ilmenau, Germany. Filed Nov. 24, 1923. Serial No. 676,735. 3 Claims. (Cl. 215—13.)



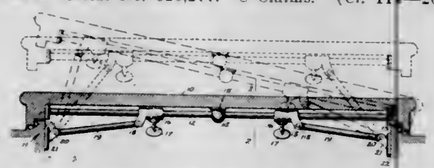
1. A vacuum-insulated bottle comprising in combination, a glass bottle, and an envelope, said bottle and envelope being provided with cooperating oppositely presented laterally projecting parts engaging in superposed relation in all positions of the bottle in said envelope as assembled and maintaining said bottle in suspended relation to, and spaced from the upper face of the bottom of, said envelope.

1,510,302. GOLF TEE. WILLIAM A. BUDROW, Pittsfield, Mass. Filed Jan. 3, 1923. Serial No. 610,466. 8 Claims. (Cl. 46—4.)



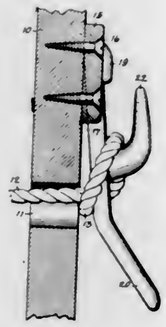
1. A golf ball support or tee comprising an arm adapted to lie upon the ground and having an offset depending earth-engaging spur at one end, and a golf ball supporting head pivoted to its other end.

1,510,303. RESILIENT-SHAFT-BEARING-RETAINING DEVICE. ETTORE BUGATTI, Molsheim, France. Filed Oct. 27, 1920. Serial No. 419,945. 1 Claim. (Cl. 64—54.)



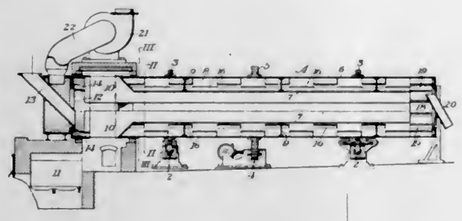
1. A shaft bearing comprising a bearing member having a radially directed flange, an annular stationary member, a compression ring for said member, a ring of resilient material on each side of said flange one of said rings arranged in said stationary member and the other arranged in said compression ring.

1,510,304. ILLUMINATED TONGUE DEPRESSOR. WILL J. CAMERON, Chicago, Ill. Filed Oct. 27, 1922. Serial No. 597,401. 4 Claims. (Cl. 128—16.)



1. An illuminated tongue depressor comprising a handle, a spatula receiving member hingedly connected adjacent one end thereto, a lateral member beyond the point of connection of said member to said handle and against which the spatula-receiving member impinges when in operation, an electric light socket in said lateral member, an electric plug connection at the opposite end of said handle, and conductors leading from said socket to said plug and embedded in the walls of the handle.

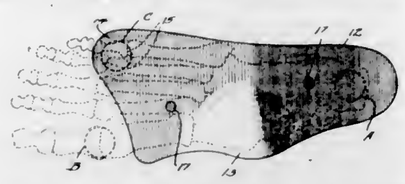
1,510,305. HATCH-COVER FITTING. WILLIAM WALLACE CAMPBELL, Yokohama, Japan. Filed Mar. 6, 1923. Serial No. 623,277. 8 Claims. (Cl. 114—20.)



1. A hatch cover fitting comprising an elongated element, a pair of elements slidable on the said elongated element, means to secure said first mentioned element at the ends thereof to a hatch cover and means to separately and pivotally secure the slidable elements to the fixed structure of a hatch at opposite sides thereof

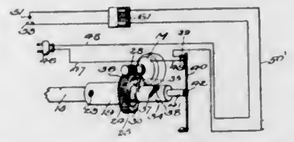
1,510,306. CLEAT. WILLIAM WALLACE CAMPBELL, Yokohama, Japan. Filed Mar. 6, 1923. Serial No. 623,278. 2 Claims. (Cl. 24—133.)

1. As a new article of manufacture, a cleat of the class described comprising a base to secure the cleat in position, a clamping element pivotally mounted on said base and adapted to receive a rope therebeneath, the free terminal end of said element being in the form of a horn deflected from the general plane of the cleat, said element having a transverse hole therethrough adjacent to the base of said horn, and a second horn on said element between said hole and the pivoted end of the element and disposed in the opposite direction from said terminal horn.



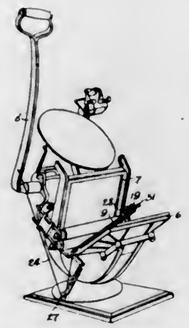
1,510,307. DRIER. LINDSAY R. CHRISTIE, Pittsburgh, Pa., assignor of one-half to Duff Patents Company, Incorporated, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 3, 1923. Serial No. 649,207. 7 Claims. (Cl. 34—6.)

2. In a drier, a rotatable drum comprising an outer shell and an inner shell providing a space between the same for receiving material to be dried, said inner shell forming a flue for heated gases and communicating at its rear end with said space, said flue being shaped in cross section to provide a plurality of radial arms having the angles therebetween each at least as great as a right angle, substantially as described.



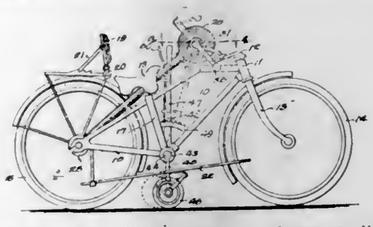
1,510,308. ARCH SUPPORT. ANSALEM ORVILLE COBBS and LEO VEARL COBBS, Spencer, Iowa. Filed Apr. 12, 1923. Serial No. 631,585. 2 Claims. (Cl. 36—71.)

1. An arch support comprising an insole portion having one part projected forwardly and adapted to extend under the fourth and fifth metatarsal joints of the foot for elevating the same, the first, second and third metatarsal joints of the foot being free of said arch support, a spring plate secured to the underside of



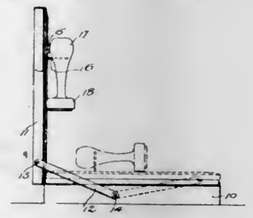
the insole portion for raising the arch of the foot and a cover for said spring plate as and for the purposes stated.

1,510,309. SPRING-WINDING ATTACHMENT FOR TALKING MACHINES. ARTHUR H. COLLIER and ALBERT R. WINKLER, Bayonne, N. J. Filed Dec. 2, 1922. Serial No. 601,585. 3 Claims. (Cl. 185—40.)



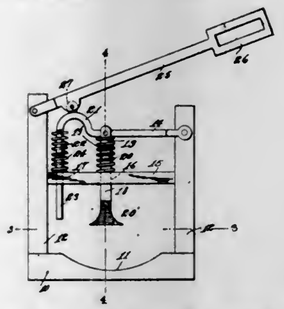
1. An attachment for phonographs comprising an electric motor operatively coupled with the spring motor for winding the same when the electric motor is in operation, a normally opened circuit including said electric motor and a source of electrical energy, a circuit closing element in said circuit at one point, operable upon shifting of the turntable brake to braking position for closing said circuit to actuate the electric motor, and means located at another point in said circuit for automatically opening the circuit to cut off the electric motor when the spring motor is wound to a predetermined tension, said means being operable when the turntable brake is released and the circuit is open at the first point, to reestablish the circuit at the latter point, by the reduction in the tension of the spring due to a partial unwinding of the same.

1,510,310. GRIPPING MECHANISM FOR PRINTING PRESSES. HARRY C. COWDREY, New York, N. Y. Filed Feb. 21, 1923. Serial No. 620,525. 5 Claims. (Cl. 101—287.)



1. In a gripping mechanism for printing presses, the combination with a platent and an operating handle for the press; of gripping members associated with said platen, means for operating said gripping members to engage the same with a sheet on said platen, and flexible means connected to said operating handle and said gripping members and actuated by said handle to move said gripping members to withdraw said sheet from the platen.

1,510,311. INVALID'S VEHICLE. PAUL M. CRU, New York, N. Y. Filed June 18, 1923. Serial No. 646,236. 2 Claims. (Cl. 208—49.)

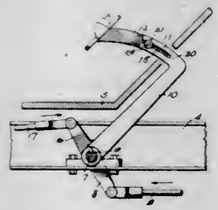


1. An invalid's vehicle including a frame, a dirigible front supporting wheel and rear supporting and driving wheel, a crank journaled in the frame and connected with the rear wheel for driving the same, a stationary crank handle and an axially movable crank handle on the crank shaft for turning the crank shaft, and a connection between the axially movable crank handle and the dirigible front wheel for effecting movements thereof to steer the vehicle.

1,510,312. INKING PAD AND STAMP RACK. EDWARD FRANCIS CUNNINGHAM, Brooklyn, N. Y. Filed Apr. 3, 1923. Serial No. 629,692. 5 Claims. (Cl. 101—333.)

1. A receptacle including a body and a cover, a rack for receiving articles provided on the outer and upper side of the cover, and a connection between said body and the cover for holding the latter vertically when in uncovered relation whereby the outer side having the rack thereon will face inwardly toward the body.

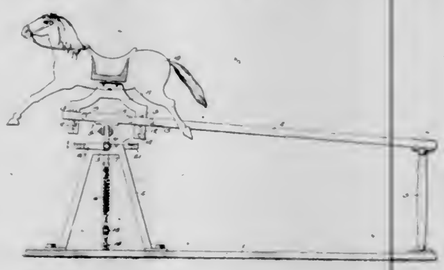
1,510,313. OYSTER-PUNCHING DEVICE. LEARY DICKERSON, Nesting, Va. Filed Dec. 28, 1923. Serial No. 683,205. 10 Claims. (Cl. 17—9.)



4. An oyster punching machine including a base, an arm movably carried by the base, a knife pivotally carried by the arm, and means having slidable connection with the arm for operating the same.

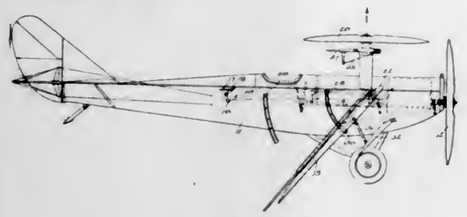
1,510,314. PLOW STANDARD. PETER L. FRY, Luling, Tex. Filed Aug. 12, 1921. Serial No. 491,736. 1 Claim. (Cl. 97—110.)

A plow comprising a longitudinally curved beam, clips pivoted to the opposite surfaces of the beam and at the



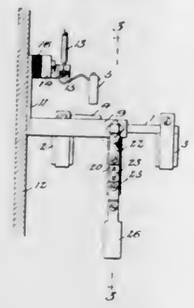
curved portion thereof, said clip having parallel lower portions which are disposed beyond the side surfaces of the beam, a link pivoted between the lower parallel portions of the clips and having an end portion which bears against the adjacent edge of the beam, a standard pivoted to the lower edge of the link, means for clamping the upper portion of the standard to the beam, and handles mounted upon the clips, the parts being so arranged that the link serves as a brace between the lower portion of the standard and the intermediate portion of the beam, whereby the handles are relieved of vibration transmitted from the standard to the beam.

1,510,315. CONTROL FOR FOUR-WHEEL-BRAKE MECHANISM. HARRY A. FULLER, Brooklyn, N. Y. Filed Jan. 2, 1924. Serial No. 683,991. 3 Claims. (Cl. 74—81.)



1. In a control mechanism for four wheel brakes, the combination with pull rods for each set of brakes; of a rocking shaft to which one of said pull rods is connected, an operating member secured to said shaft, a second operating member connected to the other pull rod and having a rotary movement with respect to said shaft and adjustable with respect to the first-named operating member, and means for securing said operating members together in various adjusted positions with respect to each other so that an operation of one of said members will be imparted to the other to actuate the set of brakes.

1,510,316. HOBBYHORSE. OLIVER HOWARD GENTRY, Rochester, N. Y. Filed Dec. 19, 1923. Serial No. 681,575. 3 Claims. (Cl. 46—22.)

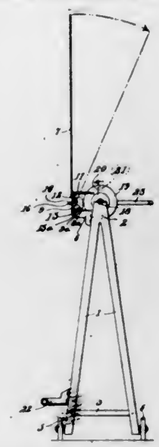


3. A hobby horse, comprising a base, a bar located above the base, a link connecting one end of the bar to the base, a seat carrying device mounted on the bar adjacent its free end, and pedal-operated means below the free end of the bar adapted to impart a movement to the bar to cause the free end thereof to move in a curved path.

1,510,317. AEROPLANE. MATTHEW GOLD, Bayonne, N. J. Filed Nov. 10, 1922. Serial No. 600,133. 5 Claims. (Cl. 244—15.)

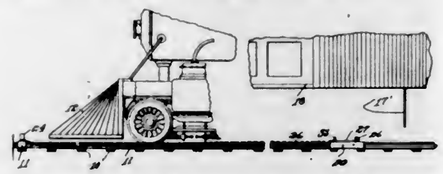
1. In an aeroplane of the character described, a fuselage, lifting means for moving the fuselage vertically, propelling means for moving the fuselage horizontally, a pair of wings pivoted adjacent their front edges to the fuselage and adapted to have their rear edges pointing downwardly as the aeroplane is being moved vertically, and means for automatically locking said wings in a substantially horizontal position by atmospheric pressure after the fuselage has been moved horizontally a given distance.

1,510,318. BALANCE SWITCH FOR TRACTORS. ELLIOTT G. GREEN, Wolcott, N. Y. Filed May 23, 1922. Serial No. 563,049. 1 Claim. (Cl. 200—52.)



A balance switch for vehicles, which comprises bracket arms fastened to the dashboard of the vehicle, a lever pivoted on said arms, weights on the ends of said lever, a second arm dependent from the pivoted lever having a slot therein, a second lever pivoted on said arms, a pin on the end of said second lever extending into said slot, said second lever having a slot in its other end, a pendulum lever pivoted on the arms, a pin on the end of said pendulum lever extending into the slot in the second lever, a switch element on the first lever, and a second switch element associated but normally out of contact therewith, the movement of the pendulum lever in accordance with the variation in inclination of the switch support causing the engagement of the switch elements.

1,510,319. CARPET-BEATING MACHINE. JOSEPH HAD, Duquesne, Pa. Filed Aug. 14, 1922. Serial No. 581,707. 3 Claims. (Cl. 15—89.)

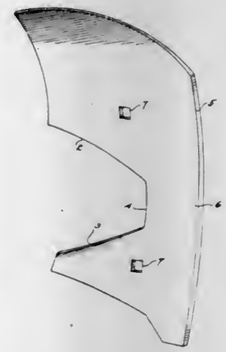


1. In a carpet beating machine, a machine frame, a longitudinal shaft journaled at the upper end thereof, beater arms hingedly supported on said frame, cooperating means carried by the beater arm hinges and said shaft to effect swinging movement of the beater arms, the hinge mounting for the beater arms including hinge sections, a

coil spring associated therewith for normally moving the hinge sections in one direction, and cooperating means

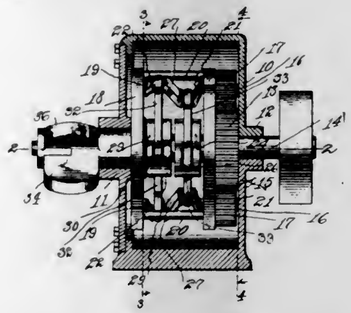
carried by said hinge sections for normally limiting spring pressed movement thereof to hold the same in alinement.

1,510,320. AUTOMATIC TRAIN STOP. ABRAHAM HAMILTON, Calgary, Alberta, Canada. Filed Aug. 28, 1923. Serial No. 659,816. 5 Claims. (Cl. 246—192.)



4. A train stopping mechanism comprising a track device including a base arranged to be temporarily secured to a railway tie, means carried by the base and normally urged into vertical position to engage a train carried valve operating means, the last-named means being movable into horizontal position, means engaged with the base and the first-named means for holding said means in such position, and a pilot operable means connected with the holding means for withdrawing the latter to release the first means.

1,510,321. FOLDING SCYTHE. HERMAN INMON, Hurley, Mo. Filed Feb. 8, 1922. Serial No. 534,915. 4 Claims. (Cl. 56—326.4.)

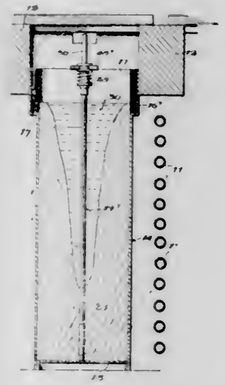


1. A scythe having a snathe, a blade pivotally mounted upon the snathe for swinging movement in the plane of its width and provided at its pivotal end with a disk head having a plurality of shoulders and adjacent bearing faces, a yielding locking bar carried by the snathe for selective engagement with said shoulders to lock the blade in different adjusted positions with relation to the snathe, and a yieldingly held longitudinally movable guide bolt extending through the snathe and through said locking bar adjacent its free end to permit yielding lateral movement of said locking bar for disengagement from said shoulders.

1,510,322. PLOW. JOHN R. JOHSON, Atlanta, Ga. Filed Nov. 5, 1923. Serial No. 672,913. 1 Claim. (Cl. 27—204.)

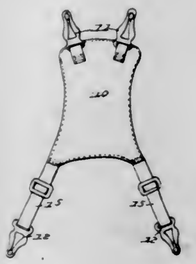
A plow-blade having one of its edges recessed to form a trapezoid and forming a pair of soil-turning wings or moldboards disposed one above the other and both curved laterally and forwardly with parallel straight slanting bottom edges, one of said wings being designed to turn the subsoil beneath the ground surface, and the other to turn the surface soil onto the subsoil.

1,510,323. MECHANICAL MOVEMENT. CHARLES L. JOHANNESSOHN, Dinsmore, Saskatchewan, Canada, assignor to Johann Motors Limited, Dinsmore, Saskatchewan. Filed Feb. 13, 1923. Serial No. 618,880. 10 Claims. (Cl. 74—34.)



1. A mechanical movement including rotatable elements, and means for causing the stopping of one of the elements while another element approaches to within a predetermined distance therefrom and then continuing in the same direction the movement of the stopped element at a gradually increasing speed, and continuing the movement of the said other element at a reduced speed.

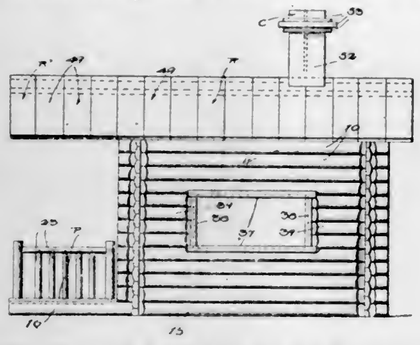
1,510,324. ICE-MAKING APPARATUS. RUDOLPH GEO. KAPING, Chicago, Ill. Filed Nov. 23, 1921. Serial No. 517,402. 11 Claims. (Cl. 62—159.)



1. In an ice making apparatus, a liquid freezing container having its upper and interior end portion provided with insulation lining.

5. In an ice making apparatus of the character described, a container or mold for freezing liquid, a tube depending therein and having a seam adapted to open upon slight pressure upon the exterior of said tube, said seam extending longitudinally of the tube and said tube being adapted to be arranged in the mold so that

the same may be connected to a source of air pressure and employed for introducing air into said mold when said mold is filled with water and said seam adapted to automatically and progressively maintain the introduction of air in close proximity to the surrounding ice in said mold as the same progresses upwardly.

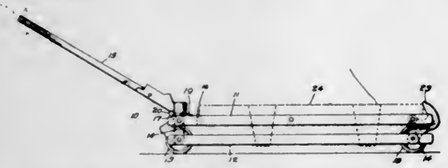


1,510,325. GARMENT SUPPORTER AND PROTECTOR. WILLIAM C. LANDON, Akron, Ohio. Filed Apr. 7, 1922. Serial No. 550,480. 1 Claim. (Cl. 241—1.)

A combined knee protector and garment support comprising a pad adapted to be applied over the knee cap and being broader transversely at its lower portion than at its upper portion, clasps applied to the upper portion of the pad at points spaced from the side edges thereof and adapted to be connected with a garment of the wearer, webbings attached at one end to the lower corners of the pad and diverging from each other downwardly from the pad and clasps carried by the webbings and adapted to be connected with the hose of the wearer at the opposite sides of the leg.

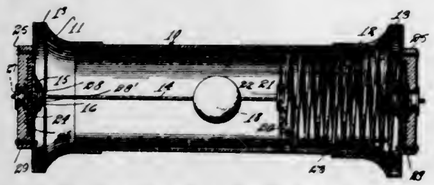
1,510,326. KNOCKDOWN PLAYHOUSE STRUCTURE. JAMES ALBERT LOCKE, Kalispell, Mont. Filed May 8, 1922. Serial No. 559,258. 3 Claims. (Cl. 20—2.)

1. A knock-down playhouse structure of the character described comprising miniature logs for forming the walls thereof, said logs being notched to mechanically tie the same together and the lowermost logs of the side walls being extended at one end thereof, a one piece floor adapted to rest upon the extended portions of the side logs and form a porch, a door in the wall



adjacent the porch, a separable roof for the structure, said roof extending over the porch, and a one piece chimney adapted to be positioned upon said roof.

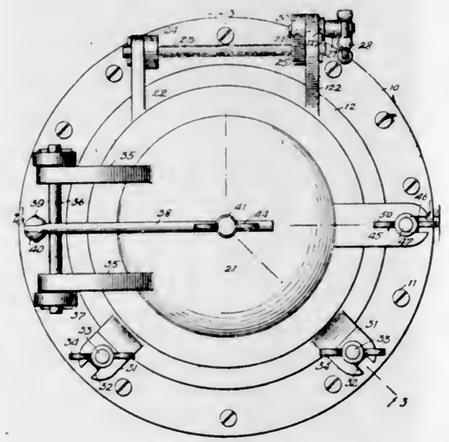
1,510,327. DATING-STAMP LOCK. AUGUSTUS MILLER, East Orange, N. J. Filed Aug. 10, 1923. Serial No. 656,650. 4 Claims. (Cl. 101—111.)



1. The combination with a dating stamp, of locking means therefor comprising a dog adapted to interlock the belts of the dating stamp, and a pair of pinching members for locking the dog against accidental movement.

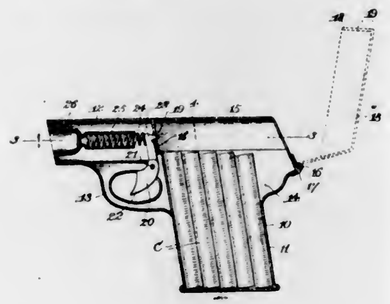
1,510,328. TRUCK. FREDERICK W. MUSSINA and NICHOLAS J. MCMAHON, Baltimore, Md., assignors to General Electric Company, a Corporation of New York. Filed Aug. 12, 1921. Serial No. 491,813. 6 Claims. (Cl. 254—10.)

1. A truck comprising a vertically movable frame for lifting and supporting the load, and locking means for the load movably associated with said frame and moved to lock the load by movement of the frame to lift the load.



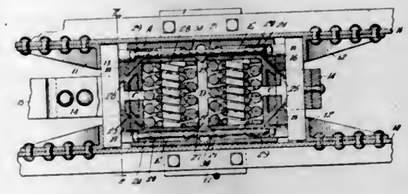
1,510,329. LINE CHALKER. STANLEY F. NASH, Kingston, Pa. Filed Mar. 27, 1923. Serial No. 628,154. 5 Claims. (Cl. 33—87.)

1. A line chalking device including a container for powdered chalk having its ends formed to receive a line



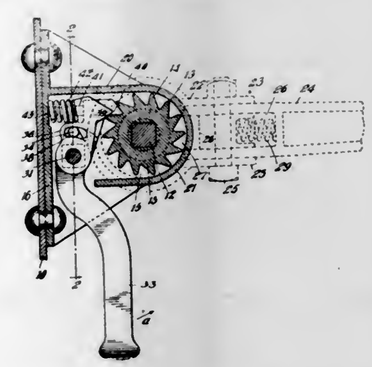
therethrough, and means disposed wholly in the chalk in the container and carried by and movable with the line, and through which the line is arranged to slide, for packing and forcing chalk into the fibres of the line as the line is drawn therethrough.

1,510,330. PORT LIGHT. DANIEL NECHRONI, Brooklyn, N. Y. Filed Dec. 9, 1922. Serial No. 605,866. 2 Claims. (Cl. 114—178.)



1. A port light and frame therefor each having hinge lugs, a hinge pin passing through the respective lugs, one of the lugs on the port light having an arcuate slot, and a clamp spindle passing through said slot and engaging the first-mentioned lug, said spindle adapted to exert a clamping action on the lugs to hold the port light against turning on the hinge pin.

1,510,331. CIGARETTE CASE. KALLMAN NEWMARK, New York, N. Y. Filed Mar. 25, 1924. Serial No. 701,825. 2 Claims. (Cl. 206—41.)

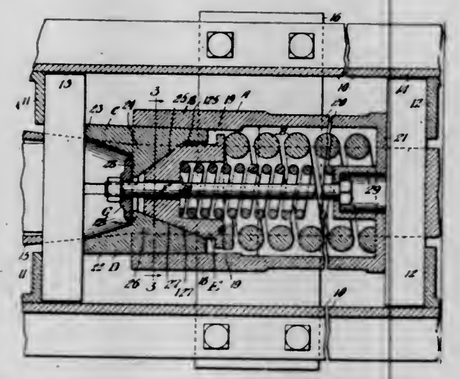


1. A novelty cigarette case comprising a body in the form of an automatic pistol, the grip or stock of which constitutes a compartment for receiving the cigarettes, said grip or stock having a normally closed hinged portion adapted to be opened for gaining access to the interior to introduce or remove the cigarettes, means for normally swinging said hinged portion to an open position, and means simulating a trigger for retaining said hinged portion in its closed position against the action of the opening means.

1,510,332. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 6, 1920. Serial No. 379,325. 4 Claims. (Cl. 213—31.)

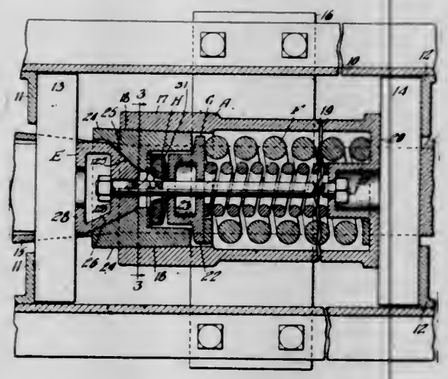
1. In a friction shock absorbing mechanism, the combination with a hollow integral friction shell unit having interior opposed parallel friction surfaces at each end thereof and interior fixed wedge sections at the center; of a pair of independent friction wedges at each end of the shell and co-operable with the corresponding interior friction surfaces of the shell; a pair of laterally movable friction shoes in each end of the shell and co-operable with the respective ends pair of friction wedges and the central fixed wedges of the shell; and spring means between the shoes to yieldingly resist relative approach thereof.

1,510,333. HAND BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 12, 1920. Serial No. 395,460. 4 Claims. (Cl. 74—118.)



1. In a hand brake mechanism for railway cars, the combination with a supporting bracket; of a rotatable chain-tightening element and means for effecting step by stem rotation thereof; a ratchet wheel; a pair of independently operable locking dogs pivotally supported on said bracket and spring-influenced to operative position with respect to said ratchet wheel, the operative portions of said locking dogs being circumferentially offset with respect to the ratchet wheel; and a release lever pivotally mounted on said bracket at the same point of pivotal mounting of said locking dogs, said release lever having means engageable with both of said dogs to move the latter simultaneously to an inoperative position.

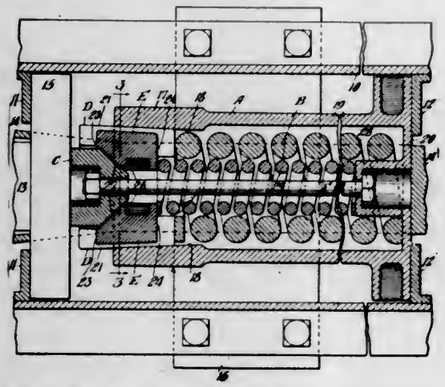
1,510,334. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 31, 1922. Serial No. 585,447. 5 Claims. (Cl. 213—32.)



2. In a friction shock absorbing mechanism, the combination with a friction shell; of a spring resistance; pressure-transmitting wedge-friction-shoes cooperable with

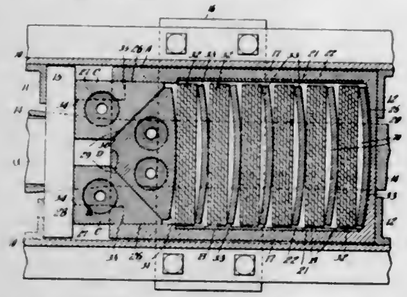
the shell; and a wedge between said shoes and spring resistance, said wedge and shoes having cooperating

sets of outwardly converged faces, some of said faces extending at a keen angle and others at a blunt angle to the axis of the mechanism.



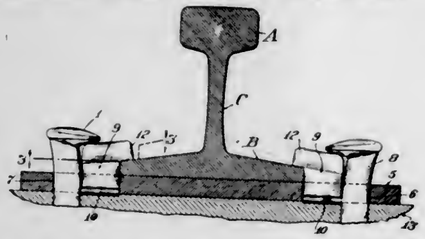
1,510,335. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 16, 1922. Serial No. 588,573. 6 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces arranged circularly; of a series of friction shoes within and cooperable with said shell and arranged in a circular series; a spring resistance; spreader means cooperable with said shoes, said shoes and spreader means having a plurality of cooperating sets of faces, part of which are arranged at a relatively keen wedge-acting angle and others at a relatively blunt releasing angle; and automatically operable pressure-equalizing means interposed between said spring resistance and all of said shoes.



1,510,336. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 11, 1922. Serial No. 600,229. 5 Claims. (Cl. 213—34.)

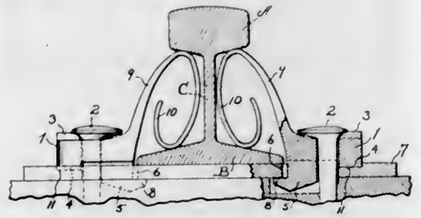
1. In a friction shock absorbing mechanism, the combination with a friction shell having friction surfaces on the interior thereof; of a spring resistance; friction shoes cooperable with the shell and having radially outwardly converged, longitudinally extending wedge faces; a pressure-transmitting wedge block; secondary wedges cooperable with said wedge block and provided also with radially outwardly converging wedge faces cooper-



able with said wedge faces of the shoes; and means for preventing relative movement of said secondary wedges and shoes longitudinally of the mechanism.

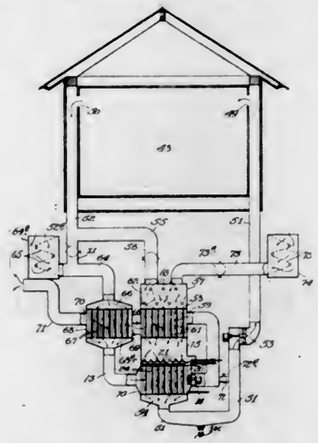
1,510,337. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 13, 1922. Serial No. 600,563. 9 Claims. (Cl. 213—30.)

1. In a friction shock absorbing mechanism; the combination with pressure creating means; of a spring resistance co-acting therewith, said spring resistance comprising a plurality of spaced apart groups of flat spring plates and resilient spacing means between each of said groups, each spacing means being relatively thicker than the spring plates.



1,510,338. RAILWAY-TIE PLATE. WARREN M. OSBORN, Chicago, Ill., assignor to Chicago Malleable Castings Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1921, Serial No. 449,607. Renewed Mar. 10, 1924. 4 Claims. (Cl. 238—304.)

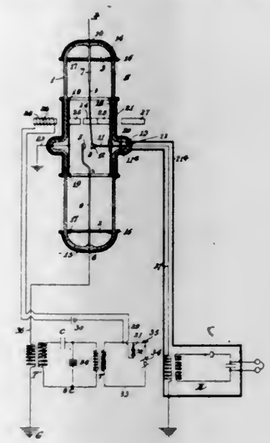
1. A tie plate for rails comprising a body having elongated spike holes at each side extending transversely



thereof beyond each side of rail-bases of different widths to receive a spike in the outer end of each hole and a spike-plug fitting between the spike and base, each plug having flanges at its lower end to engage the lower end of its spike-hole and having a wing overlying the base to interlock both sides of the base and plate.

1,510,339. RAIL-ANCHORING CLIP. WARREN M. OSBORN, Chicago, Ill., assignor to Chicago Malleable Castings Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1922, Serial No. 564,418. Renewed Mar. 10, 1924. 4 Claims. (Cl. 238—292.)

1. A rail-anchoring clip comprising a body having a spike-hole, a depending lug at the inner end of the spike-hole having an inwardly directed wing, and a rigid flange on the upper portion of the body above the wing and terminating in a depending coiled spring.

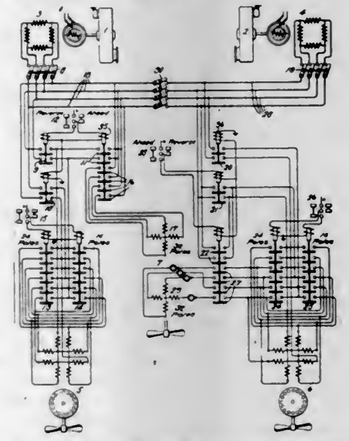


1,510,340. ART OF COOLING SUBSTANCES. PETER D. PAULS, Maywood, Ill. Filed Feb. 17, 1922. Serial No. 537,847. 15 Claims. (Cl. 62—176.)

10. The method of cooling a substance which consists in subjecting the substance to the cooling action of liquid evaporated by contact with air and preliminarily cooling the substance and cooling the air preliminary to its contact with the liquid, by subjecting the substance and the air to the cooling effect of the air after contacting the latter with the liquid.

1,510,341. ELECTRICAL APPARATUS. JOHN A. PROCTOR, Lexington, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed June 4, 1921. Serial No. 475,144. 1 Claim. (Cl. 250—13.)

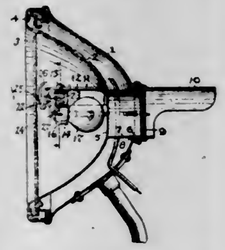
In a radio communication installation of the type wherein the same aerial is used for both transmitting and receiving apparatus alternately connected thereto, and wherein the aerial switch for the receiving apparatus is operated by the connection of the transmitting apparatus to the aerial, and wherein the contacts of said switch have slight relative movement permitting action at a rate corresponding with a high rate of connection and disconnection of the transmitting apparatus relative to the aerial, the improvement, permitting the connection of the receiving apparatus to the aerial on the high potential side of the transmitting apparatus and thereby permitting the reception of short waves,



said improvement comprising a vacuum between the contacts of said receiving apparatus switch, said vacuum constituting a strong dielectric resisting the high potential on the aerial caused by the operation of the transmitting apparatus.

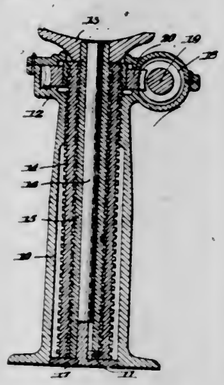
1,510,342. RECOVERY OF SULPHUR FROM GASES. NIELS E. RAMMUSH, Stockton-on-Tees, England. Filed Aug. 10, 1920. Serial No. 402,690. 2 Claims. (Cl. 23—10.)

1. In a process of removing sulphur from gases by means of a suspension of solid oxidizing agent, circulating the suspension in a distributed condition in a closed path through one part of which the gas is continuously passed while into another part free oxygen is admitted at such a slow rate that the partial pressure of the available oxygen in the atmosphere in this part is reduced to that below which revivification proceeds at an uneconomical rate.



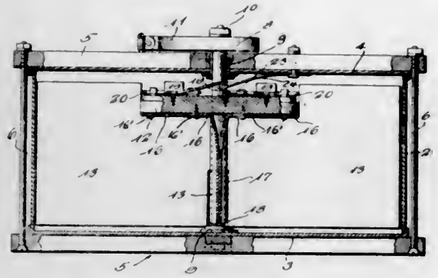
1,510,343. SHIP PROPULSION. LOUIS RASK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 14, 1923. Serial No. 645,441. 7 Claims. (Cl. 172—8.)

1. A system of electric ship propulsion wherein the propeller motors are arranged to be supplied with al-



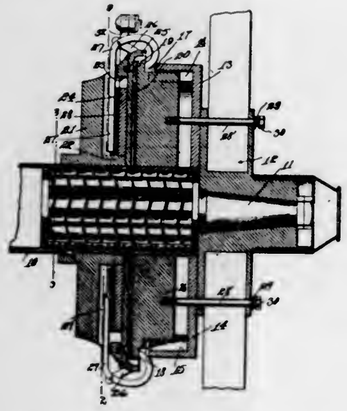
ternating current from a suitable source of power, comprising a double fed motor, a plurality of single fed motors, and means for interconnecting said motors with said source whereby at full speed of the ship said motors may be caused to exert equal torques and at cruising speed said double fed motor may be driven at a speed corresponding to the slip of the propeller.

1,510,344. AUTOMOBILE LAMP. CHRISTIAN REINKER, Lakewood, Ohio. Filed Mar. 27, 1922. Serial No. 547,172. 2 Claims. (Cl. 240—7.)



1. A headlight for automobiles, comprising a parabolic reflector; a lens at the front of said reflector having an opaque upper portion extending below the center thereof; an arcuate shield secured to said reflector above the axis thereof and extending forwardly; a lamp holder suspended from the outer end of said shield adjacent said lens; and a lamp in said holder facing the rear of said reflector, said reflector having a light transmitting opening and a lens at its rear opposite said lamp.

1,510,345. LIFTING JACK FOR AUTOMOBILES. JOHN ROBERT ROBERTSON, New Glasgow, Nova Scotia, Canada. Filed Nov. 7, 1922. Serial No. 599,554. 2 Claims. (Cl. 254—102.)

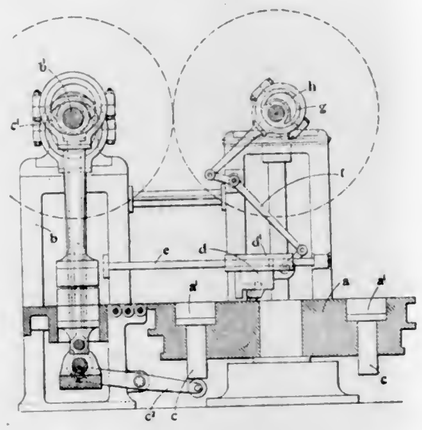


1. A lifting jack for automobiles, and the like, comprising an inwardly threaded casing, a screw adapted to engage with said casing and threaded on the inside to engage with an oppositely threaded inner screw, a concentrically arranged rod adapted to slidably engage with the inner screw and fixedly secured to the casing, whereby the rotation of the inner screw is prevented, means carried by the inner screw adapted to support the axle of a vehicle, and means for operating the outer screw to raise and lower the inner screw, and comprising the spline gear keyed to said outer screw and designed to slidably engage with the outer screw, a worm gear meshing with the spline gear, and a spindle for the worm gear, connected through a universal joint at its outer end with telescopic handle means to operate the lifting jack from a distance.

1,510,346. TRAP. ALBERT G. SMITH, New Concord, Ky. Filed Aug. 27, 1923. Serial No. 659,628. 4 Claims. (Cl. 43—74.)

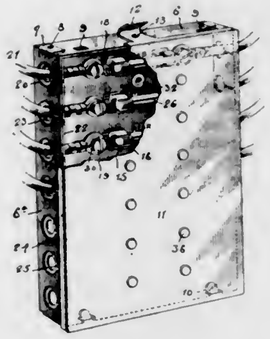
1. A trap comprising a cylindrical casing having an inlet and outlet spaced apart circumferentially, a spring-rotated shaft extending coaxially into said casings and having a plurality of radial wings extending to the casing wall, a support rotatable with the shaft and disposed at the upper edges of said wings, said support having circumferentially spaced stop shoulders equal in number to said wings, a movable stop stationarily mounted with respect to said stop shoulders and co-operable therewith, and releasing devices for said movable stop movably mounted on the support adjacent said stop shoulders and having extended bait-carrying triggers between said wings.

1,510,347. VEHICLE BRAKE. BERTRAM C. SMITH, Red Lion, Pa. Filed Sept. 12, 1923. Serial No. 662,289. 6 Claims. (Cl. 188—72.)



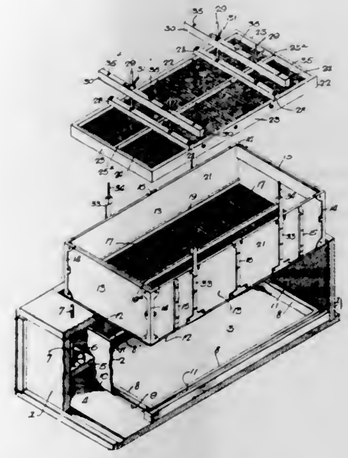
1. In a vehicle brake, an axle carried member, a wheel carried member rotatable with the wheel and movable into and out of engagement with the axle carried member, means for normally holding the wheel carried member out of engagement with the axle carried member, and means for moving the wheel carried member into engagement with the axle carried member.

1,510,348. EXPLOSIVE AND ITS MANUFACTURE. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Dec. 14, 1920. Serial No. 430,770. 6 Claims. (Cl. 52—11.)



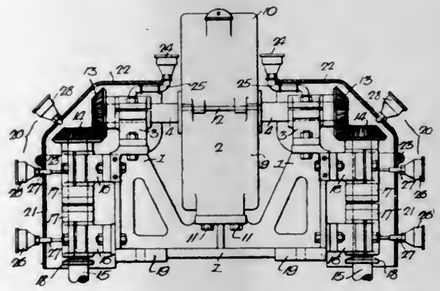
1. An explosive comprising nitrostarch, an oxidizing agent, a stabilizing agent, and a liquid constituting a solvent for the stabilizing agent but not for the nitrostarch.

1,510,349. BRICKMAKING AND LIKE PRESS. THOMAS STANLEY, Stoke-on-Trent, England, assignor of one-half to Thomas Slater Whitfield, Basford, Stoke-on-Trent, England. Filed Mar. 7, 1924. Serial No. 697,654. 4 Claims. (Cl. 25—64.)



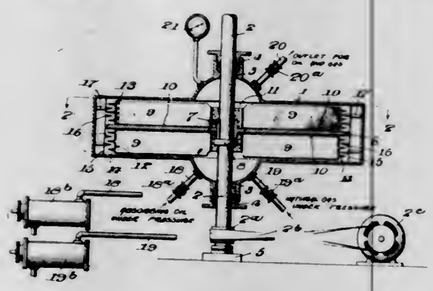
1. In a brick making press having a rotary mold table, a pusher horizontally reciprocated above the said table for transferring the blocks of molded material from the said table, said pusher comprising an oil receptacle, a plurality of openings through the bottom of the said receptacle, wicks inserted into said openings and means for supporting the pusher above the table so that the wicks are maintained in contact therewith.

1,510,350. FUSE BOX. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 25, 1920. Serial No. 419,245. 4 Claims. (Cl. 200—133.)



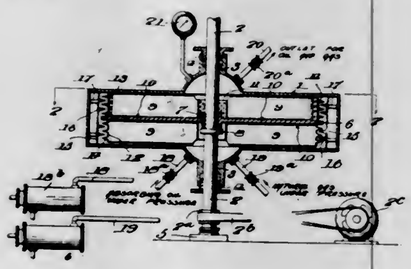
1. In a fuse box, a sheet metal body having its opposite sides pierced to afford a series of wire-entry apertures, an insulating base plate fitting within said body and having a series of pairs of fuse-clip terminals which register with the wire-entry apertures in the sides of the box, securing means piercing the base for holding the said clips in position thereon, and a flexible insulating lining supporting said base from the bottom of the box and having up-turned side flanges facing the apertured sides of the box and pierced to admit lead wires to said clips.

1,510,351. DYEING MACHINE. JAMES H. THOMPSON, Trenton, N. J., assignor to Hussong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed Dec. 22, 1922. Serial No. 608,532. 6 Claims. (Cl. 8—19.)



1. The combination in a dyeing machine, of a vat; means for circulating dye liquor in the vat; beams resting on the edges of the vat; a cage suspended from the beams and within the vat; and a cover for the cage, also carried by the beams.

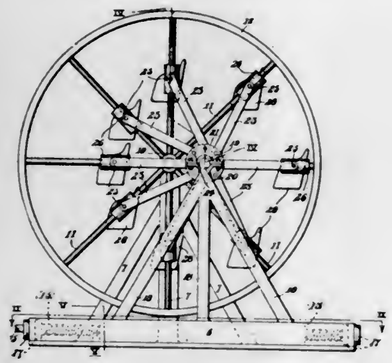
1,510,352. DRIVING HEAD FOR DYEING MACHINES. JAMES H. THOMPSON, Trenton, N. J., assignor to Hussong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed Mar. 29, 1924. Serial No. 702,796. 3 Claims. (Cl. 74—56.)



2. The combination in a driving head for dyeing machines, of a frame recessed at the center; two bearings on the upper portion of the frame, one at each side of the recess; a horizontal shaft mounted in the bearings; two bearings secured to each side of the frame; vertical shafts mounted in said side bearings; two roller thrust bearings on each vertical shaft between the side bearings; bevel gear wheels through which the vertical shafts are driven from the horizontal shaft; a sprocket wheel on the horizontal shaft; a casing enclosing said wheel and its drive chain, said casing being secured to the frame; and side casings enclosing the shafts and gears, said casings being made in two parts, the lower part being fixed and the upper part being movable.

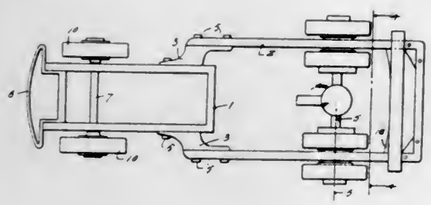
1,510,353. CENTRIFUGAL PROCESS OF BLENDING OIL AND GAS. GEORGE M. TURNER, Riverside, Calif. Filed May 7, 1920. Serial No. 379,582. 5 Claims. (Cl. 196—5.)

1. The process of extracting gasoline from natural gas, which process comprises maintaining by the application of centrifugal force a banked up body of absorbing oil under centrifugal pressure within a casing, forcing gas containing gasoline to bubble through said banked up oil with sufficient pressure to overcome the centrifugal force applied to the oil, and separating the gasoline content from the absorbing liquid.



1,510,354. APPARATUS FOR SEPARATING GASOLINE FROM NATURAL GAS. GEORGE M. TURNER, Riverside, Calif. Original application filed May 7, 1920, Serial No. 379,582. Divided and this application filed Jan. 4, 1921. Serial No. 434,894. 9 Claims. (Cl. 261—84.)

9. Apparatus for using absorbing liquids to extract casing head gasoline from natural gas, which apparatus comprises a casing having a wall extending vertically, means for supplying gas and absorbing liquids to the interior of said casing, means for withdrawing materials treated, a rotor member within said casing mounted to rotate on its vertical axis in a horizontal plane, said means for withdrawing materials leading from a point positioned above said rotor member, and power means associated with said rotor member, said power means and rotor member together comprising means for forming and maintaining by centrifugal force a bank of liquid around the wall of said casing and having a thickness at least as great as the distance from said wall to said rotor member.

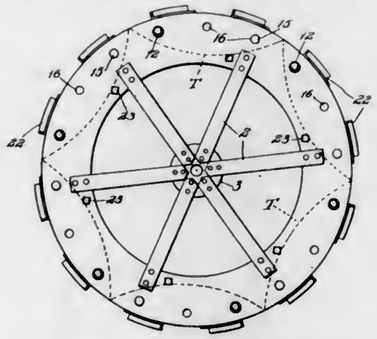


1,510,355. MECHANICAL ROUNDABOUT. JOSEPH TYMKOW, Ardrossan, Alberta, Canada, assignor of one-fourth to Mike Senyk and one-fourth to Peter Jacobs, both of Ardrossan, Alberta, Canada. Filed June 18, 1923. Serial No. 646,061. 5 Claims. (Cl. 46—27.)

1. In a device of the class described, a base, a shaft rotatably supported above said base, a spoked wheel keyed to said shaft; a second base, a stub shaft rotatably supported thereabove, a hub mounted on the stub shaft, radial spokes secured to said hub, blocks pivotally connected to said spokes encircling the spokes of said wheel, a car rotatably connected to each block, and means for

connecting the first mentioned rotatable shaft with a source of power for driving the same to cause said cars to travel in an arcuate path.

1,510,356. VEHICLE RUNNING GEAR. WALTER B. UFFERT and CHARLES W. POWELL, New York, N. Y.; said Uffert assignor of his entire right to said Powell. Filed Dec. 14, 1921. Serial No. 522,306. 5 Claims. (Cl. 180—22.)

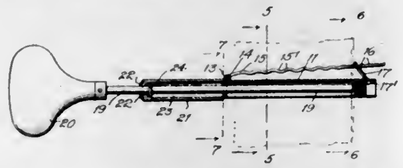


1. A double wheel attachment for the rear axle of a motor vehicle, comprising a rotatable supporting member including a body and opposed extensions, the body of said supporting member being disposed beneath the side bar of the vehicle frame and mounted on the rear axle housing, a wheel mounted on each of the extensions and disposed upon opposite sides of the side bar, a journal box secured to the body of said member and supported thereby, a spring supported by said journal box and supporting the side bars of the frame, a driving attachment between the axle and one of the wheels, and means securing the wheels to the body so as to cause them to rotate in synchronism therewith and with each other.

1,510,357. TRACTION WHEEL. WILLIAM E. VAIL, Ronceverte, W. Va. Filed Mar. 21, 1924. Serial No. 700,879. 8 Claims. (Cl. 301—50.)

5. A wheel comprising spaced rim plates, a plurality of tread sections interposed therebetween, each of said sections being reversible, means for holding said section in fixed position between the plates when the section is in either of its two positions, each of said sections having oppositely arranged surfaces adapted to be positioned to serve as the tread of the wheel, each of said sections comprising two longitudinally curved plates, said plates being each on substantially the same radii, blocks interposed between the opposite end portions of the plates and secured thereto, means coacting with one of said blocks and the rim plates for pivotally supporting the

section, a locking means carried by the second block and engageable with the plates to hold the section in either

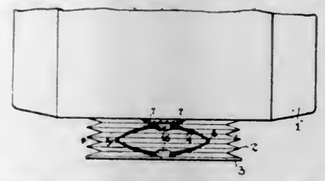


of its two positions, and a reinforcing web interposed between the plates of the section and between the blocks.

1,510,358. METHOD OF PREPARING A COMPOSITION FOR PRESERVING WOOD. VICTOR VANDEVOORDE, Brussels, Belgium, assignor to N. V. Netherland Colonial Trading Cy., Brussels, Belgium, a Corporation. Filed Nov. 6, 1920. Serial No. 422,258. 2 Claims. (Cl. 134—78.6.)

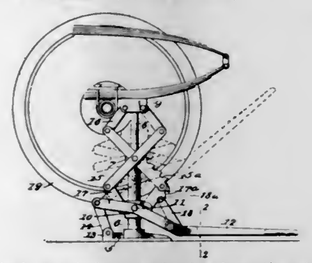
1. A method for manufacturing a wood preserving solution, the said method consisting in preparing an ammoniacal solution of copper hydroxide, preparing separately an ammoniacal solution of zinc formate, the total proportion of copper and zinc being of about 6%, and an ammoniacal solution of phenol containing about 8% of phenol and an excess of ammonia and finally mixing the solutions whereby the products mixed together are maintained in solution.

1,510,359. HAIR WAVER AND CURLER. ALFRED VAN GALE, Newark, N. J. Filed Nov. 27, 1923. Serial No. 677,206. 12 Claims. (Cl. 132—41.)



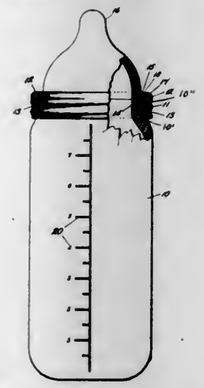
1. A device of the kind described, comprising a body of angular cross sectional shape, a clamp-bar pivotally connected with one end of said body to extend longitudinally over one face of the latter, a keeper loop pivoted to the opposite end of said body, and the free end of said clamp-bar having a plurality of catch means selectively engageable by said keeper loop.

1,510,360. ASSEMBLING COVER. HERMANUS VAN RIJMENAM, The Hague, Netherlands. Filed Feb. 12, 1923. Serial No. 618,558. 4 Claims. (Cl. 129—1.)



2. An assembling cover comprising a back portion; and an elastic material in said back portion adapted to removably receive staples.

1,510,361. BUFFER ATTACHMENT FOR VESTIBULE DIAPHRAGMS. WALTER D. VAUGHAN and EDWARD M. DICKERMAN, Rutland, Vt. Filed Jan. 30, 1924. Serial No. 689,448. 3 Claims. (Cl. 105—14.)



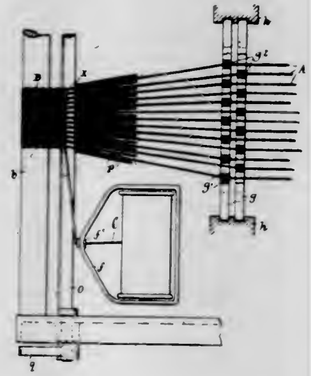
1. A buffer attachment for car vestibule diaphragms comprising a connecting bracket adapted to be secured to one end of a car, an elliptical spring formed of a pair of oppositely disposed sections connected together at their ends, a coupling device inclosing and connected to the central portion of a spring section and including means for securing said section to the face plate of the diaphragm, and a coupling device inclosing and connected to the central portion of the other section of the spring and including means for securing said section to said connecting bracket, said coupling devices extending towards each other and each including a binding plate having an arcuate face bearing against the inner face of a spring section.

1,510,362. AUTOMOBILE JACK. STANLEY J. VESLEY, Cedar Rapids, Iowa. Filed Dec. 17, 1923. Serial No. 681,087. 4 Claims. (Cl. 254—122.)

4. In a jack, a tubular standard, a base therefor, a post slidable in the standard, a collar slidable thereon, toggle-levers connecting the collar with the post, a hand-lever pivoted to the collar, a link connecting the lever with the standard, and a pawl connecting with the lever and engageable with contiguous members of the toggle, the same being serrated for that purpose.

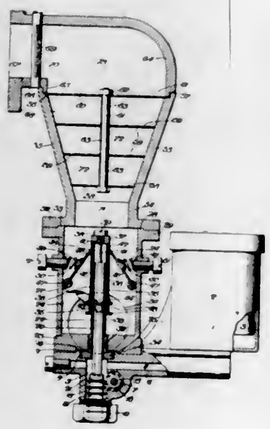
1,510,363. NURSING BOTTLE. JOSEPH CARL WANGEN, Great Falls, Mont. Filed Mar. 31, 1923. Serial No. 629,152. 5 Claims. (Cl. 215—11.)

1. A nursing bottle comprising a body portion provided with a peripherally threaded neck having a substantially



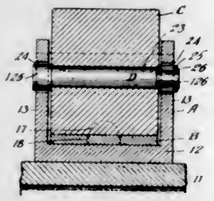
wide plane forward end edge provided with an annular groove, a resilient nipple having a plane inner end edge seating entirely on the forward end edge of the neck and formed with a bead extending into said groove to prevent lateral shifting of the nipple relative to the neck, the inner diameter of said nipple at its inner end edge being the same as the inner diameter of said neck, whereby the inner face of the nipple at its inner end will form a continuation of the inner face of the neck, and a locking collar engaging directly with the threads of the neck and having means opposing the forward end edge of the neck and engaging the nipple for securing it to the bottle and further providing in connection with said bead a liquid tight joint between the inner end edge of the nipple and the forward end edge of the neck.

1,510,364. ELECTRIC BATTERY WITH AN ABSORBED LIQUID. GUSTAVE WEISSMANN, Paris, France. Filed May 16, 1922. Serial No. 561,427. 4 Claims. (Cl. 204—29.)



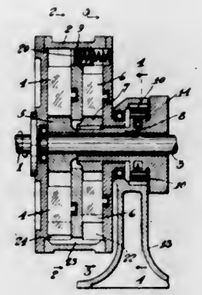
1. A battery with an absorbed liquid, comprising in combination: a jar,—a negative electrode having multiple parallel plane elements constituting, within this jar, a partition which forms a series of compartments,—a spongy insulating coating covering this negative electrode, a positive electrode having multiple elements placed in the compartments formed by the negative electrode,—a depolarizing material, in a divided state, filling the said compartments and packed or compressed in the latter in such a way that it is in direct contact at the same time with the negative electrode covered with its envelope and with the positive electrode,—and electrolyte impregnating this depolarizing material and the spongy insulating coating of the negative electrode.

1,510,365. LOOM. WILLIAM S. WELLS, Bethlehem, Pa. Filed Apr. 14, 1923. Serial No. 632,070. 2 Claims. (Cl. 139—191.)



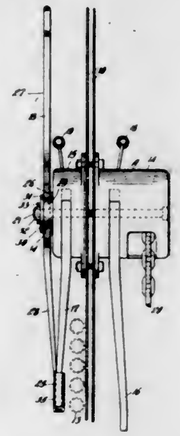
2. A loom including means to hold stretched the warp and woven cloth, means to hold the warp threads converging in plan toward the cloth, and a comb to beat up the filling introduced into sheds formed in the warp, said comb extending transversely of said plane and being pivoted on an axis substantially parallel with and close to the fell of the cloth to move through said plane with its dents intermeshing with the warp threads and having said dents converging longitudinally thereof toward the line across them where they have impact with the fell.

1,510,366. FUEL MIXER. JAMES CARLILE WHITEMAN, Christchurch, New Zealand, assignor to Whiteman's "Supurb" Carburettor Company Limited, Sydney, New South Wales, Australia. Filed Aug. 20, 1920. Serial No. 404,885. 5 Claims. (Cl. 48—180.)



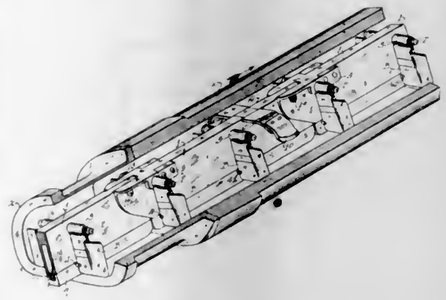
5. In a carburetor, an atomizing and gas expansion chamber consisting in an outwardly inclined or flared wall, a removable cap or dome carried by the chamber above the wall, a gas outlet branch communicating with the cap or dome, and a plurality of super-imposed perforated partitions disposed within the chamber and forming therein a series of super-imposed compartments inter-communicating with each other through the apertures in the partitions, the area of each partition being greater than the area of that preceding it and the perforations in each partition being of less area than those in the partition preceding it and being staggered in relation thereto.

1,510,367. ANTIFRICTION BEARING. KEITH WILLIAMS, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 27, 1921. Serial No. 525,051. 2 Claims. (Cl. 64—65.)



1. In an anti-friction bearing, the combination with a retaining member provided with spaced integral side walls and having a longitudinally extending bearing surface; of an anti-friction element adapted to have rolling contact with said bearing surface and located between said side walls; and means for retaining said element in assembled relation with said retaining member, comprising a pin headed at one end and extending through the anti-friction element and having its ends projecting beyond the ends of the anti-friction element, a bushing on the other extended end of said pin rigidly and permanently attached thereto, the side walls of the retaining member having elongated openings therethrough within which said ends of the pin are adapted to work back and forth, all the portions of said bushing, of the headed end of the pin and of the pin lying between the outer planes of the side walls of said retaining member, being of smaller diameter than the width of said openings

1,510,368. HYDRAULIC COUPLING AND CHANGE-SPEED GEAR. SVEN GUSTAF WINGQUIST, Gottenborg, Sweden. Filed July 14, 1922. Serial No. 575,027. 5 Claims. (Cl. 192—58.)



1. A hydraulic coupling and change speed gear comprising a delivery pump and at least one receiving pump and a valve-controlled passage between the delivery pump and the receiving pump, said hydraulic coupling and change speed gear comprising a driving rotor, a driven rotor, and a stator, one of said rotors being common to both the delivery pump and the receiving pump, means for automatically releasing the stator so as to rotate freely with the common rotor, when the said valve-controlled passage is closed, and means for permitting the stator to automatically obtain a gradually decreased speed of rotation, when opening said valve-controlled passage, so that the change from one step of coupling to another will take place smoothly and the energy of movement stored in the stator will be utilized.

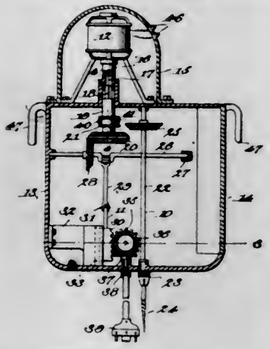
1,510,369. HAND BRAKE. ALBERT P. WITHALL, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 20, 1923. Serial No. 669,664. 7 Claims. (Cl. 74—114.)

1. In an operating device adapted for attachment to the depending ratchet lever of a hand brake mechanism having a housing located on the inner side of the end wall of a car and a supporting bolt about the axis of which the depending lever is oscillatable, the combination with a hub; of a pair of arms laterally projecting from said hub, one of said arms serving as an operating lever and the other of said arms having means for attaching the same to the ratchet lever; and a journal element for said hub, whereby, said operating arm may be oscillated to effect operation of the ratchet lever.

1,510,370. APPARATUS FOR CHARGING AND DISCHARGING GAS RETORTS. JAMES GEORGE WILLCOX ALDRIDGE, London, England. Filed Aug. 31, 1923. Serial No. 660,335. 9 Claims. (Cl. 214—34.)

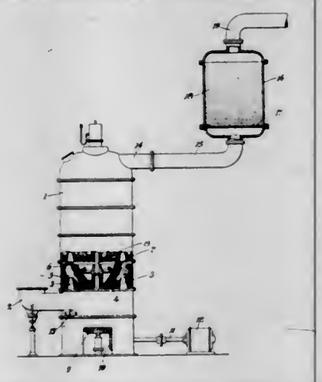
1. A retort charging apparatus, comprising a central member that is adapted to be introduced into and withdrawn from a retort, push plates at the sides of said central member hinged at their upper edges to horizontally-disposed pivots, and means for maintaining said push plates in an upright position at approximately right angles to said central member during the forward stroke of said member, the upper outer edge portions of said push plates being deflected rearwardly so as to clear the retort when said plates swing upwardly into a horizontal position during the return stroke of said central member.

1,510,371. POWER BALER. ARNOLD ABRAHAM ALLISON, Teakworth, Transvaal, South Africa. Filed Apr. 3, 1922. Serial No. 549,162. 2 Claims. (Cl. 100—24.)



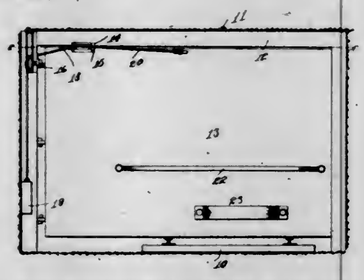
1. In a power baler for hay and the like, the combination with a fixed support, of a cage having a normally open lower end adapted to be closed by said fixed support, fingers pivotally connected to said cage and adapted to be struck by lugs on a ram for moving the cage to a position to open its lower end, an axially movable rod connected to the fingers for moving the latter out of operative position, a lever connected to the rod, a link connected to the lever, a second lever connected to the link, a cam engaging the second lever, a shaft on which the cam is mounted, and a wheel fixed to said shaft and adapted to be rotated by a bale emerging from the baler.

1,510,372. COMBINED DRILLING AND GRINDING MACHINE. LOUIS AMBROSIO, Richmond Hill, N. Y. Filed July 20, 1923. Serial No. 652,837. 4 Claims. (Cl. 29—26.)



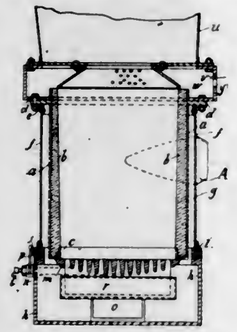
1. In a combined drilling and grinding machine, a housing, a motor, a shaft rotatable by said motor, a double gear formed on the free end of said shaft, a drilling element, a vertical shaft journaled in said housing and having a gear for co-action with the double gear for transmitting rotary movement to said drilling element, a crank shaft journaled in said housing and having a gear thereon for co-action with said double gear,

and means operable by said crank shaft for imparting oscillatory movement to said grinding element, and shift-



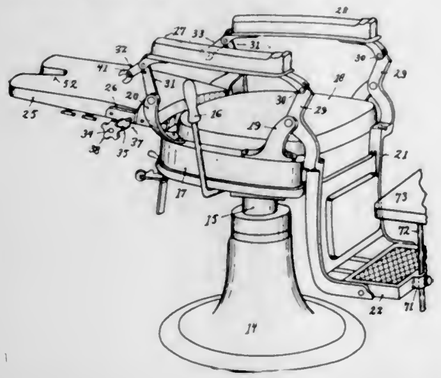
ing means for said double gear for rendering one of said gears operative and the other of said gears inoperative.

1,510,373. PROCESS OF PURIFYING CARBON DIOXIDE ADVANTAGEOUSLY. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed May 5, 1924. Serial No. 710,975. 11 Claims. (Cl. 23—10.)



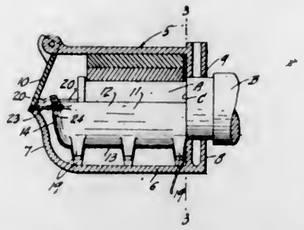
8. The process which comprises purifying carbon dioxide by passing it through activated carbon to remove odorous and objectionable impurities therefrom.

1,510,374. MINE DOOR. ERNEST L. BAILEY, CHARLES H. SCOTT, and WALLACE WILEY, Lookout, Ky. Filed July 3, 1924. Serial No. 724,096. 3 Claims. (Cl. 246—304.)



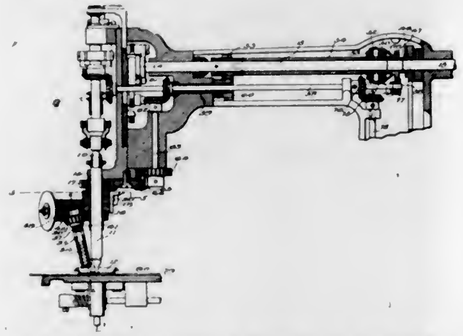
2. A mine tunnel closure including a doorway, a door mounted for swinging movement in the doorway, car engaging bumpers on each side of the door, a horizontal grooved wheel mounted in the upper side of the doorway, vertical grooved wheels at opposite sides of the doorway at the supported side of the door, and weight carrying cables connected with the door and engaged with the wheels.

1,510,375. GAS PRODUCER FOR USE IN AUTOMOBILES AND THE LIKE. HERBERT WILLIAM BAMBER, London, England, assignor to Maurice Steinman Bezencenet, London, England. Filed Nov. 23, 1921. Serial No. 517,244. 1 Claim. (Cl. 48—64.)



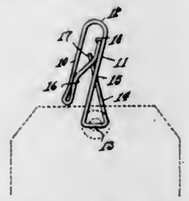
A gas producer comprising an inner generating chamber provided with a single external flange at its upper end, an outer metallic casing surrounding said generating chamber and an ash pit disposed below said chamber, the upper end of said casing having a flange that supports, and is removably secured to, said external flange and the lower end of said casing resting in an annular groove in the top of the ash pit, a grate swivellably mounted on a tubular axis within said ash pit and contacting with the lower end of the inner generating chamber, a vaporizer situated beneath said grate and a pipe connecting said tubular axis with the vaporizer.

1,510,376. SURGICAL AND DENTAL CHAIR. EUGENE BERNINGHAUS, Cincinnati, Ohio, assignor to The Eugene Berninghaus Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 16, 1921. Serial No. 501,170. 6 Claims. (Cl. 155—25.)



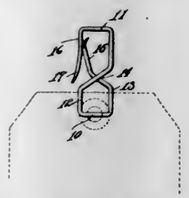
1. A surgical chair comprising a base a vertically and rotatably adjustable seat, a chair back having a medial recess at its upper end to receive and afford a wider range of adjustment for a head rest, a head rest longitudinally and rotatably mounted relative to said back and adapted to enter said medial recess, and means to lock said back to any position of adjustment relative to said seat, said back being adjustable substantially into a horizontal plane with the upper face of said seat.

1,510,377. LUBRICATING MEANS FOR JOURNAL BOXES. BERT H. BLOSE, Johnsonburg, Pa. Filed Aug. 5, 1922. Serial No. 579,903. 5 Claims. (Cl. 64—24.)



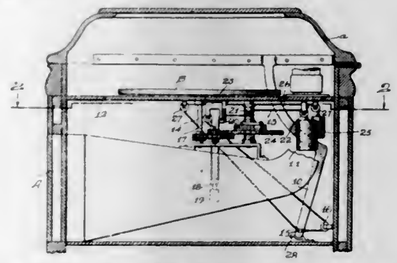
1. Lubricating means for journal boxes, comprising a lubricant containing receptacle disposed within a journal box, the outer end of said receptacle being closed by a wall and the inner end having an opening accommodating the journal, said inner end being formed to receive packing engaging the journal, and an outwardly and upwardly swingable cover hinged upon the upper edge of the outer end wall of the receptacle and having its free end engaging against the outer end of the journal for excluding dust and preventing splashing of the lubricant.

1,510,378. MACHINE FOR ATTACHING BEADS TO FABRICS. RAPHAEL BOLANDI, New York, N. Y. Filed July 10, 1922. Serial No. 573,850. 2 Claims. (Cl. 112—99.)



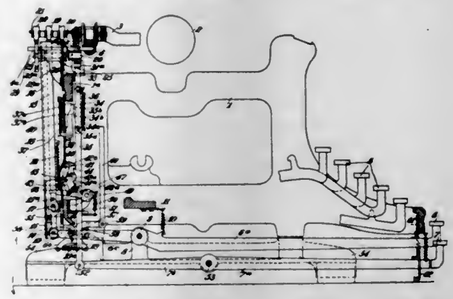
2. In a sewing machine attachment for adapting sewing machines to the sewing of stringed beads to fabrics, a bead feeding mechanism comprising a two-piece casing, means for adjusting one casing section relative to the other, spring means for normally holding the casing sections in their adjusted positions, and a worm mounted in the casing for compelling the passage of the beads therethrough.

1,510,379. TAG FASTENER. EARL J. BRACKEN, Butte, Mont. Filed Aug. 28, 1923. Serial No. 659,824. 5 Claims. (Cl. 40—26.)



2. A tag fastener including an arm bent to form a fastening eye and a tag retaining eye, the fastening eye being formed with a tongue, and the tag retaining eye being formed with an extended portion which projects past the arm and the tongue and provides a barrier between the eyes.

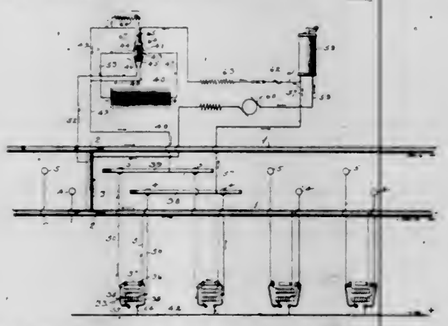
1,510,380. TAG-FASTENING MEANS. EARL J. BRACKEN, Butte, Mont. Filed Aug. 28, 1923. Serial No. 659,825. 5 Claims. (Cl. 40—26.)



2. A tag fastener including a fastening loop and a tag retaining loop, a tongue carried by the tag retaining loop, an arm carried by the fastening loop and contacting with the tongue, the said arm projecting beyond the tongue to form a hook.

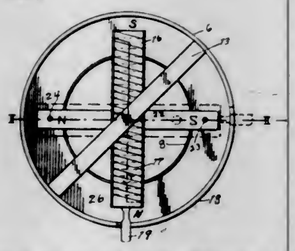
1,510,381. DRIVE MEANS FOR PHONOGRAPHS. AUGUST A. BREDER, Egg Harbor City, N. J. Filed Mar. 1, 1921. Serial No. 448,757. 5 Claims. (Cl. 185—32.)

1. In a phonograph and cabinet, a weight adapted to operate the record table, means to raise the weight with the lifting of the cabinet cover and means to permit the weight to descend independently of cover movements, said weight being suspended on a cord winding on a shaft below the record table.



1,510,382. TABULATOR FOR TYPEWRITERS. THEODOR EUGEN BÜSCHMANN, Chemnitz-Kappel, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Aktiengesellschaft, Schonau, Chemnitz, Germany. Filed Mar. 23, 1921. Serial No. 454,946. 7 Claims. (Cl. 197—177.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

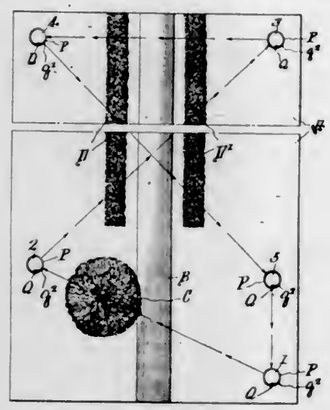
1. In tabulating mechanism for typewriters, a supporting bar fixedly mounted on the typewriter carriage and movable with said carriage, adjustable column



stops and adjustable column selecting stops arranged on said bar, key operated denominational stops cooperating with the column stops to halt the movement of the carriage, column selecting bars, keys for actuating said column selecting bars, locking means for the denominational stops actuated by said column selecting bars, and means actuated by the column selecting stops for releasing said locking means.

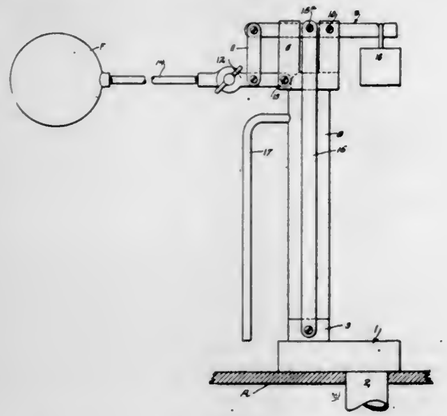
1,510,383. ELECTRIC TRACTION SYSTEM. GEORGE L. CAMPBELL, Philadelphia, HARRY R. NOLL, Williamsport, and HARRY G. DAVIS, Philadelphia, Pa., assignors, by mesne assignments, to Samuel P. Curtiss, Philadelphia, Pa. Filed Sept. 28, 1920. Serial No. 413,369. 26 Claims. (Cl. 191—17.)

22. An electrically operated circuit closer comprising an electro-magnet, a plurality of vibratory armatures, therefor, a pair of relatively movable contact members controlled by each armature, said contact members being connected in multiple whereby the circuit will be closed by any one or more of the contacts, and means for intermittently energizing the electro-magnet.



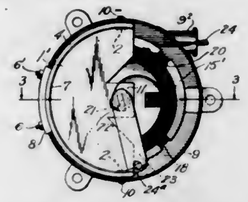
1,510,384. THERMOCONTROLLED ELECTRIC DEVICE. DIONISIO C. CASTELLANOS, San Quentin, Calif. Filed Feb. 9, 1923. Serial No. 618,098. 3 Claims. (Cl. 200—142.)

3. In a device of the character described, a receptacle having a vertical annular wall, an annular ring positioned within said receptacle and spaced from said wall, a meltable composition confined between said annular ring and said wall, a magnetic bar supported above said composition and having pins extending into said composition, a contact mounted on said annular ring, a contact mounted on said magnetic bar, an iron bar positioned above said magnetic bar, an electric circuit having one of its terminals connected to said contact and the other of its terminals connected to said magnetic bar.



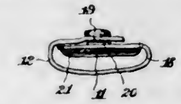
1,510,385. GAME APPARATUS. CECIL P. CAULKINS, New London, Conn. Filed Oct. 28, 1922. Serial No. 597,551. 1 Claim. (Cl. 46—61.)

In a game, the combination of a series of goal pieces to be placed on a playing surface at desired distances apart and at desired locations, a game piece, a flip stick for striking the game piece to project it from goal to goal, said game piece having supporting sides for contact with the surface to maintain the game piece in a



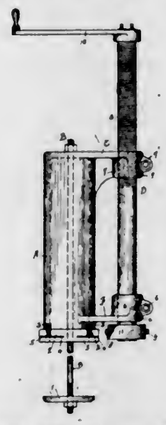
definite position when at rest, and a number of strokes on each of said sides of the game piece to be added to the actual strokes required for moving the game piece throughout the series of goals.

1,510,386. AUTOMATIC CUT-OFF. ISAAC M. CHANNELL, Duquesne, Pa. Filed May 29, 1922. Serial No. 564,429. 2 Claims. (Cl. 137—104.)



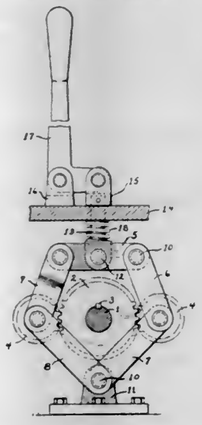
2. In an automatic cut-off, a water receiving head, a body secured in said head and having a longitudinally extending bore, a casing fitting about said body, a block having a depending neck secured in said casing and positioned and adapted to fit about the upper portion of said body so as to close the bore through the same when the casing is in lowered position, a main operating lever pivoted in the block at one side thereof, a supplemental lever pivoted in the block at the other side thereof and below said main lever, links connecting said supplemental lever to the main lever at one end thereof, a rod secured to the supplemental lever, a float carried by said rod, links pivotally connecting the head and the main lever between the first mentioned links and the pivot point of said main lever, and a weight suspended from the other end of said main lever and acting to force said casing downwardly, the casing being provided with an outlet opening adjacent to the upper end of the body.

1,510,387. REEL. JOHN G. COOK, Brooklyn, N. Y., assignor to Klaxon Company, a Corporation of Delaware. Filed Mar. 18, 1919. Serial No. 283,327. 8 Claims. (Cl. 173—367.)



1. In a device of the character described, a spool comprising metal end discs connected by an insulating hub, an extension cord confined on the spool by the discs and having wires connected to the discs, a semicircular supporting plate conforming to and enclosing one half of the periphery of the spool, end plates insulated from the supporting plate and forming therewith an open sided housing allowing insertion of the spool, binding posts extending through the supporting plate and connected to the end plates, and metal trunnions supported in the end plates and supporting the end discs for rotation thereon; substantially as described.

1,510,388. GARMENT AND SHOULDER STRAP THEREFOR. LOUISE DARLING, Toronto, Ontario, Canada. Filed May 25, 1923. Serial No. 641,441. 1 Claim. (Cl. 241—12.)



In a garment shoulder strap a clasping device being associated therewith comprising a flexible element, a tape having its ends secured to one end of the flexible element and underlying the strap in a manner to slidably secure said flexible element to the strap, cooperating fastening elements secured to the flexible element at its ends and arranged upon opposite sides thereof for the purpose specified.

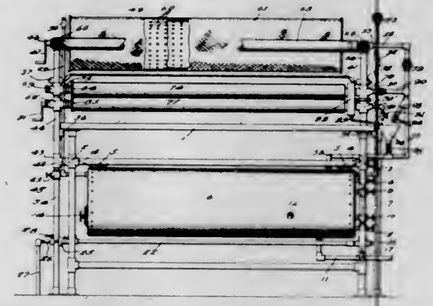
1,510,389. CYLINDER-BORING MACHINE. ARTHUR DICKERSON, Salt Lake City, Utah, assignor to Mechanical Development Company, Salt Lake City, Utah, a Corporation. Filed Jan. 31, 1921. Serial No. 441,206. 2 Claims. (Cl. 77—2.)

1. A cylinder boring machine comprising a standard having integral bearing arms for a boring bar, lugs projecting from the lower portion of said standard each having a threaded hole therein; other lugs integral with said standard and spaced from the perforated lugs; tap screws with the threads thereon meshing with the threads in the hole of the first mentioned lugs, whereby the upper of said bearing arms may be adjusted laterally to direct the said boring bar.

1,510,390. BRAKE. MAX B. A. DORING, Brooklyn, N. Y., assignor to Doring Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 28, 1923. Serial No. 659,736. 3 Claims. (Cl. 188—75.)

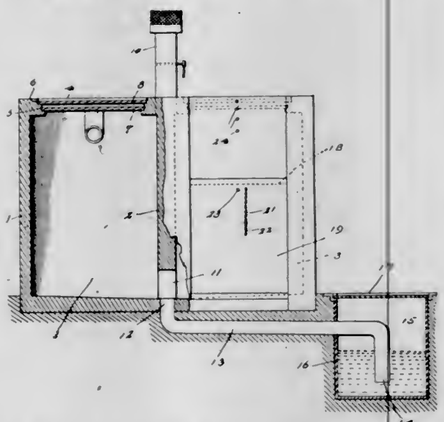
1. A braking device comprising in combination a rotating member, a brake gear secured to said member, a plurality of oppositely disposed auxiliary brake gears arranged to mesh with said brake gear, and means for tightly meshing said gears to brake said member, the braking action of said gears being at an angle to the direction of movement of said gears.

1,510,391. DRAFT APPLIANCE. THOMAS J. FEELY, Duluth, Minn., assignor of three-eighths to Mark Elliott and one-fourth to August Beste, both of Virginia, Minn. Filed Feb. 11, 1924. Serial No. 691,887. 4 Claims. (Cl. 110—49.)



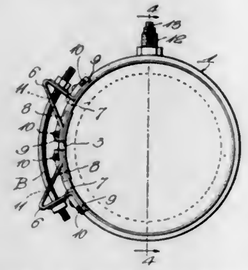
1. The combination with an enclosed combustion chamber and flue leading therefrom, of an auxiliary conduit within and extending longitudinally of the flue and adjacent one side thereof, said conduit having an opening in the end farthermost from the combustion chamber communicating with the interior of the flue and the opposite end discharging directly into the combustion chamber, and a damper within the flue for deflecting portions of the products of combustion into the conduit.

1,510,392. SPONGING MACHINE. SAMUEL FISHER, Baltimore, Md. Filed July 16, 1923. Serial No. 651,900. 2 Claims. (Cl. 26—43.)



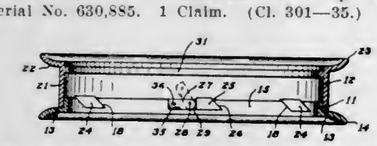
1. In an apparatus for the purpose set forth, a frame supported table, a steam generating tank removably and adjustably secured thereon, a blow off plug in the tank,

a blow off valve associated with the tank, a steam valve also associated with the tank, a water gage for the tank, try-out cocks for the tank, means for admitting water into the tank, a check valve controlling such means, an outlet cock associated with such means, heating means for the boiler, an apertured hollow drum revolubly supported above the table and having a fabric facing against which cloth to be sponged is arranged, spring influenced means for forcing the cloth against the drum, a valve controlled pipe from the steam generator communicating with the drum, a valve controlled drain in said pipe,



hollow rollers supported below the drum, intermeshing gears therefor, means for revolving the drum, means for revolving the rollers, valve controlled means for admitting steam from the steam conducting pipe into the upper roller, means establishing a steam passage between the upper and lower roller, means regulating the admission of steam from the upper into the lower roller, means for draining condensation from said lower roller, a funnel-shaped member receiving the condensation and connected with the steam conducting pipe and a valve controlling the passage between said condensation receiving member and said steam conducting pipe.

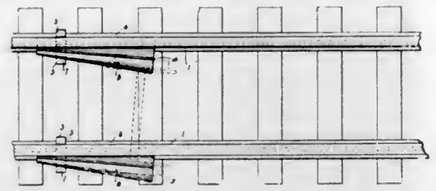
1,510,393. INCINERATOR. THOMAS FOGG, Chicago, Ill. Filed July 16, 1920. Serial No. 396,669. 1 Claim. (Cl. 110—8.)



A device of the class described including a casing, a partition dividing the casing into spaced compartments, each compartment having an opening at its upper end, the side edges of said openings having grooves therein arranged in step relation, superposed cover plates having their edges mounted in said grooves, said partition having portions thereof cut away at its upper and lower edge providing communicating openings between said compartments at the tops and bottoms thereof, a flue aligned with the opening at the top of the partition to provide communication to the compartments, a drain pipe aligned with the opening at the bottom of the partition to provide communication to the compartment, a trap for receiving liquid from the drain pipe, and the inner surfaces of the bottoms of said compartments inclining towards the opening formed in the bottom of the partition.

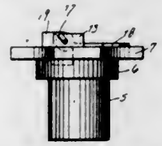
1,510,394. PIPE BAND. CHARLES A. FRAZIER, Fairoaks, Calif. Filed Dec. 30, 1922. Serial No. 609,861. 3 Claims. (Cl. 137—99.)

1. A leak-stop for pipes comprising a transversely split pipe-encircling band, lugs on said band at the end portions thereof, each of said lugs having arms extending in diverging relation toward the band, one arm of each lug being positioned substantially at right angles to the outer face of the band and the other arm extending at an incline from the first mentioned arm toward the ends of the band, the arms of said lugs being provided with openings which are alined circumferentially of the band, and a clamping bolt passing through said openings for drawing the band tightly around a pipe.



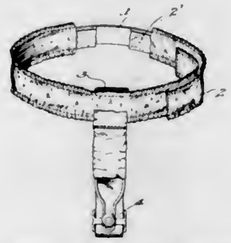
1,510,395. DEMOUNTABLE RIM. JOSEPH B. FUHR and ARTHUR A. BARNES, Philadelphia, Pa., assignors to Fuhr-Barnes Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 9, 1923. Serial No. 630,885. 1 Claim. (Cl. 301—35.)

A wheel rim comprising companion overlapping sections, one of said sections being provided with diagonally arranged cut-out portions at its inner edge, diagonally arranged lugs on the other section for engagement in said recess, said recessed section being provided with a relatively large locking recess having a diagonal end and a straight end, a locking lug on the lug carrying section for fitting in said locking recess and being shorter than the recess, a locking member pivotally connected to the lug carrying section and having long and short end portions, said locking member adapted to swing into said locking recess with its short end against said locking lug for locking the sections connected and when swung into unlocking inoperative position, the shorter end of the locking member will engage the edge of the locking recess and move the sections apart.



1,510,396. CAR REPLACER. BRYANT B. GIBBS, Maysville, N. C. Filed Apr. 25, 1924. Serial No. 709,011. 2 Claims. (Cl. 104—269.)

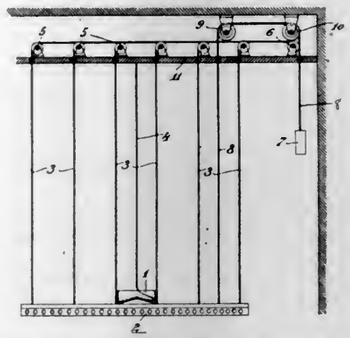
2. In a means for replacing a derailed car on the rails of a track, a clamp underlying and engaging one edge of the base of a rail, an upstanding lug on the opposite end of the clamp, a rerailing block comprising a member which gradually decreases in width from one to its other end, a central upstanding rib on the block, and the upper face of the block being gradually rounded from the rib to the inclined edges thereof, the reduced end of the block designed to be wedged between the lug of the clamp and the web of a rail and to be arranged at an



inclination with respect to said rail, and the edge of the block opposite the web exerting a friction thereagainst.

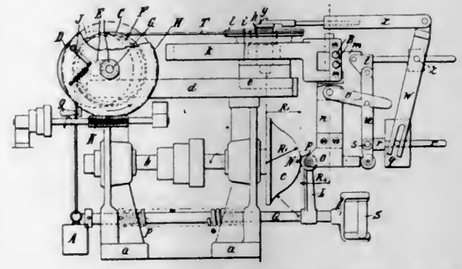
1,510,397. MILK-BOTTLE CLOSURE. WILLIAM F. GOODWIN, San Francisco, Calif. Filed June 18, 1923. Serial No. 646,118. 1 Claim. (Cl. 215—63.)

In a device of the character described a tubular portion, an enlarged portion formed integral therewith and having a head formed thereon, said head having recesses formed on its edge, upstanding lugs formed on said head and having inclined recesses formed therein, a recess formed in said head at a point below the plane of said head, a valve comprising a flat portion, a counterweight formed integral therewith, a pivot extending through said valve at a point adjacent said counter-weight, said valve being capable of contacting the face of said head when said head is in a horizontal position, substantially as and for the purpose specified.



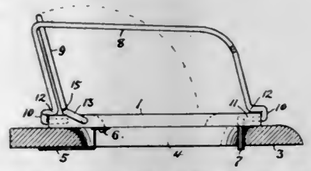
1,510,398. SUPPORTER. JAMES W. GRANDLE, Pierre, S. Dak., assignor of one-half to Lawrence Lawler, Pierre, S. Dak. Filed Dec. 15, 1922. Serial No. 607,165. 1 Claim. (Cl. 241—6.)

A supporter of the class described comprising a spring metal strip having its ends overlapped, a strip of felt on the inner face of the metal strip, a cover enclosing the felt and metal strips, a tape having its upper end looped about the device and a fastener connected with its lower end.



1,510,399. COUNTERBALANCE FOR STAGE LIGHTS. ALOIS HAUCK, Vienna, Austria. Filed June 4, 1924. Serial No. 717,905. 1 Claim. (Cl. 240—69.)

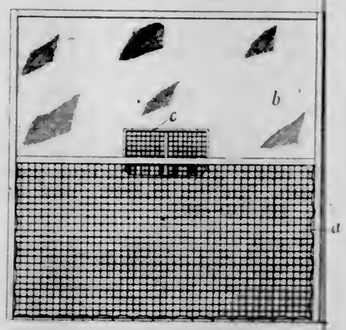
In combination, a vertically movable member, suspension members connected at one end to the vertically movable member, guiding means for the suspension members, a counter-balance connected with the opposite ends of the suspension members, a cable connected with the vertically movable member, and a receptacle carried by the vertically movable member having a centrally raised portion and adapted during the upward movement of the vertically movable member to cause the cable to arrange itself within the receptacle, the weight of the cable length deposited in the receptacle at the time and varying in



accordance with the height of the vertically movable member being accurately balanced at any height by a correct proportion between the weight per unit length of the suspension members and the weight per unit length of the cable.

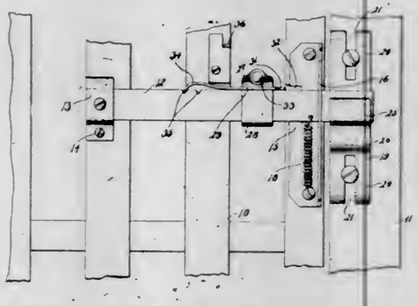
1,510,400. MACHINE FOR SPINNING DISHED ARTICLES OF SHEET METAL. WILHELM HERDEN, Berlin, Germany. Filed Feb. 26, 1924. Serial No. 695,387. 9 Claims. (Cl. 113—52.)

1. A machine for spinning dished articles of sheet metal comprising in combination, a curved former, a pivoted arm movable in a horizontal plane and having its vertical axis of rotation vertically above and coaxial with the center of curvature of said former, a member pivotally mounted on said arm, a spinning roller suspended from said member, and means cooperating with said arm for guiding the spinning roller over the former.



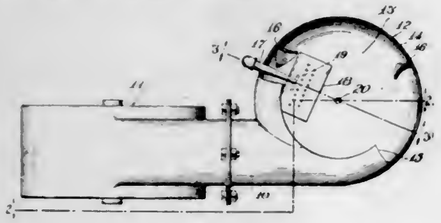
1,510,401. TOILET-SEAT ATTACHMENT. WILLIAM J. HESS, Fort Wayne, Ind., assignor to Van Arnam Manufacturing Company, a Corporation of Indiana. Filed Feb. 2, 1924. Serial No. 690,125. 5 Claims. (Cl. 4—239.)

1. In an attachment of the class described, a rectangular seat having an aperture therein; a pair of arms, one for each side of the seat, each arm consisting of a rod bent into the form of a loop, each end terminal being shaped into a hook that extends in a plane that lies at an obtuse angle relative to that of the loop, and with



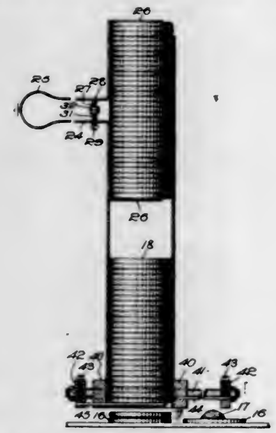
the ends of the hooks extending toward each other in axial alinement and projecting into the corresponding ends of the seat, each hook having a fulcrum that bears against the top of the seat and limits the outward swing of the arm; a back formed of a bent rod with terminal hooks, the ends of which extend respectively into the opposite sides of the seat in axial alinement, there being a fulcrum formed by each of said hooks that bears against the top of the seat and limits the backward swing of said back; a loop secured to the bottom of said seat having a rearwardly extending portion spaced apart therefrom; and a pendant stud near the front end of said seat, said loop and stud being engageable in the opening of a regular toilet seat and operable to hold the attachment centered thereon.

1,510,402. APPLIANCE FOR PLAYING GAMES RESEMBLING LAWN TENNIS. WILLIAM HOPWOOD, Manchester, England. Filed Mar. 2, 1922. Serial No. 540,544. 2 Claims. (Cl. 46—59.)



1. A game appliance simulating the conventional game of tennis comprising a frame adapted to be arranged adjacent a tennis court whereby the game may be played thereon, said frame including a lower net portion adapted to be arranged adjacent the court and an upper portion lying in the same plane as the lower net portion, said upper and lower portions being joined and forming a continuation of one another whereby to prevent the passage of a ball therebetween, said upper portion being adapted to cause a ball projected thereagainst to rebound into the court and return to the player.

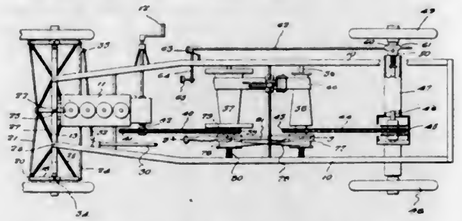
1,510,403. LATCH. WILLIAM E. JONES, White, Ark. Filed May 11, 1923. Serial No. 638,306. 3 Claims. (Cl. 292—228.)



1. A latch embodying a pivotally mounted latch bar, a keeper formed from a single strip of material bent intermediate its ends to provide aligned slotted attaching ears and an offset portion having an inner wall spaced from and substantially parallel with one of the attaching ears to provide a latch bar receiving groove and an outwardly and downwardly inclined cam portion extending from the upper edge of said groove and having its lower end connected to the other attaching ear.

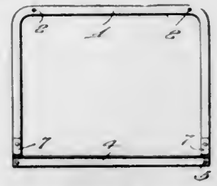
1,510,404. LIQUID-FUEL BURNER. FRANK KORNER, Galesburg, Ill., assignor to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1921, Serial No. 444,094. Renewed Mar. 10, 1924. 3 Claims. (Cl. 158—77.)

2. In a liquid fuel burner, a chamber having a tangential air-inlet, an oil supply, an oil distributing plate near the bottom of the chamber, and baffle plates arranged opposite the air inlet and inclined from top to bottom in the direction of the movement of the air current and curved in cross-section toward the air-inlet.



1,510,405. WAFER OR BISCUIT SANDWICH-MAKING MECHANISM. EDWARD E. LAWRENCE, Jamaica, N. Y., assignor to Loose Wiles Biscuit Company, Long Island City, N. Y., a Corporation of New York. Filed Aug. 4, 1919. Serial No. 315,171. 13 Claims. (Cl. 107—1.)

2. Wafer or biscuit sandwich-making mechanism comprising in combination, a travelling support for a lower cake, cracker or the like, means to support in superposed relation upper cakes, crackers or the like, a combined releasing means and abutment for the upper cakes, and means to elevate the lower cake into engaging relation with the released upper cake against said combined releasing means and abutment.

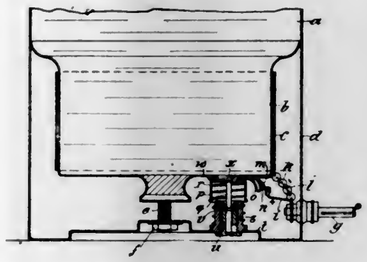


13. Wafer or biscuit sandwich-making mechanism comprising in combination, means to support a lower cake, cracker or the like, a hopper having means to position a superimposed series of upper cakes, crackers or the like, means for depositing in sequence single units of said series onto said lower cake, cracker or the like, said means including a reciprocable frame having opposed escapement members carried by opposite sides of said frame and each effective alternately to support said series and spaced vertically by substantially the thickness of a single unit, and means to reciprocate said frame.

1,510,406. MOTOR VEHICLE. WILLIAM W. LEWIS, Coatesville, Pa. Filed July 19, 1922. Serial No. 576,065. 1 Claim. (Cl. 280—94.)

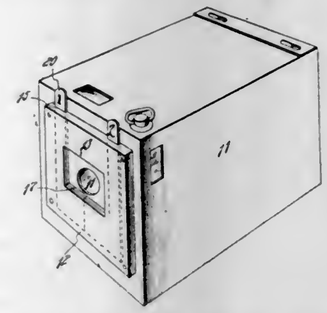
The combination with a vehicle, of a steering mechanism comprising an axle, a spindle mounted for horizontal pivotal movement at each end thereof, oppositely projecting laterally extending arms carried by each of the spindles, a centrally located arm pivotally mounted transversely of the axle, rods connecting the last mentioned arm with the spindle carried arms and springs connecting each end of each of the arms and secured to the axle at a point upon each side of and intermediate the center and the ends of the axle to normally maintain the spindles in alignment.

1,510,407. COUCH-HAMMOCK FRAME. DUANE MELVILLE LILLIBRIDGE, St. Charles, Ill. Filed Aug. 24, 1923. Serial No. 659,197. 1 Claim. (Cl. 5—124.)



A knock-down hammock frame comprising a metal end frame of arched form provided at its lower ends with a pair of key-hole slots whose smaller ends are disposed downwardly, a horizontal seat end supporting bar extending between and overlapping said ends of the arched frame, headed studs extending from the ends of said bar and received in the lower ends of said key-hole slots, said studs being movable into the enlarged ends of the slots by upward movement of said bar to permit disconnection of the frame and bar, and stops pivoted to the ends of said end frame and normally abutting said bar to hold the same against such upward movement.

1,510,408. KNEE BRACE. ROBERT A. LYCHOU, Chester, Pa. Filed June 5, 1922. Serial No. 565,860. 3 Claims. (Cl. 128—87.)

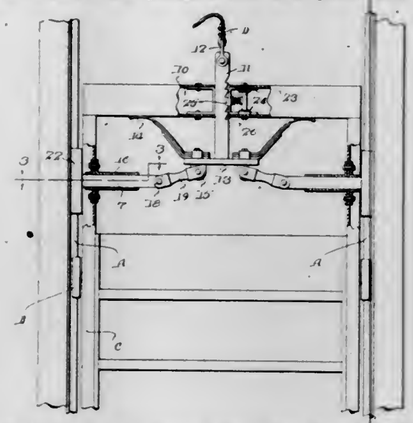


1. In a surgical brace the combination of a pair of bandage members, lacing means to adjustably fix said bandage members in spaced relation upon a limb, tubular flexible bracing members bridged between and engaging said bandage members, flexible bracing core members encased in the aforesaid tubular bracing members, said tubular and solid flexible members co-operating with each other and with said bandage members to flexibly brace and support a limb joint.

1,510,409. SAFETY DEVICE FOR ELECTRIC COOKING AND HEATING DEVICES. HEINRICH MAYBAUM, Sundern, Germany. Filed Mar. 29, 1922. Serial No. 547,916. 1 Claim. (Cl. 200—142.)

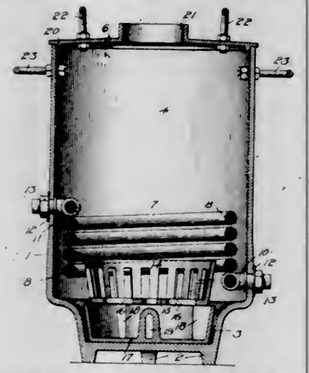
A safety circuit breaker comprising a stationary guide sleeve carrying a fuse pin, a contact carrying member guided by said guide sleeve and movable into circuit making and circuit breaking positions; a spring biasing said contact carrying member to its contact breaking position, a circuit contact carried by said contact carrying member, a compressible spring interposed between said circuit contact and said contact carrying member and compressed therebetween when the contact carrying member is in its circuit making position, and a guiding pin on said contact carrying member for engaging the fuse pin whereby to hold the contact carrying member in its circuit making position when the fuse pin is relatively cold, the first said spring operating to break the fuse pin and thereby break the circuit when the fuse pin becomes relatively hot.

1,510,410. CAMERA. WALTER C. MENYHART and BENJAMIN KATZ, New York, N. Y. Filed Oct. 24, 1923. Serial No. 670,550. 2 Claims. (Cl. 95—36.)



1. In a device of the class described, the combination with a box camera, having a lens opening, a housing secured to the front of the camera and provided with an opening for register with the lens opening, pockets formed in said housing, slots communicating with said pockets and opening at one side of said housing, shutters mounted for sliding movement in said housing and normally concealed within said pockets, manipulating portions formed on said shutters, and extending out of said slots for guiding the shutters when moved alternately across said lens opening.

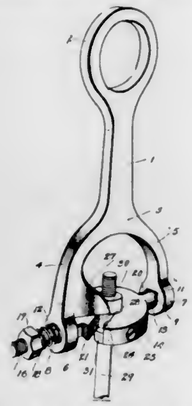
1,510,411. SAFETY MINE ELEVATOR. CHARLES J. MOILANEN, Hancock, Mich. Filed Jan. 17, 1924. Serial No. 686,910. 1 Claim. (Cl. 187—86.)



An elevator safety device comprising a guide in the top of an elevator, a bar slidable through the guide and to which the hoisting cable is connected, a plate on the lower end of said bar, spring means between the top of the elevator and said plate for forcing the bar downwardly, guides in the sides of the elevator, plungers

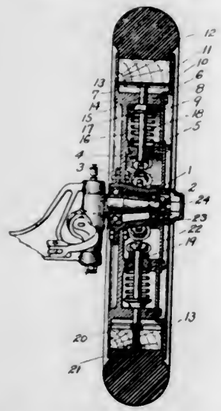
slidable through said last named guides and carrying shoes engageable with the elevator guides, connecting links between the plungers and said plate, said bar

being formed with ratchet teeth, and a pawl element slidable transversely along the top of the elevator and co-operating with said teeth for preventing upward movement of the bar.



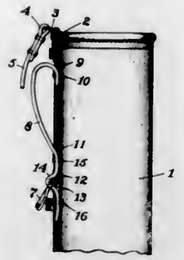
1,510,412. HEATER FOR STOCK-WATERING TANKS. EMMET NICHOLS, Paris, Ill. Filed Nov. 26, 1921. Serial No. 517,845. 3 Claims. (Cl. 126—367.)

2. A portable water heater adapted to be placed in a liquid contained in a tank and including a pot-shaped container having an open upper end, the lower portion of said container being of reduced diameter, an ash receiver arranged in the lower portion of said container and adapted to receive ashes falling from the larger portion of the retainer, a receptacle arranged in the container, supported by said ash receiver and forming a grate, a liquid circulating coil arranged in the container and having its ends extending through the wall of the container and opened to permit liquid contained in said tank to circulate therethrough, a downdraft flue opening into said container and having one of its walls formed by the wall of the container, the inner circumference of said coil being of sufficient size to permit the gate and ash receiver to be removed through the upper end of the container, and a cover for said container and flue.



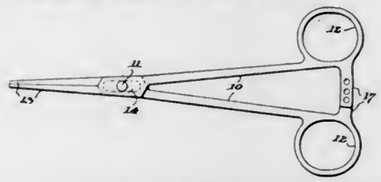
1,510,413. SUCKER-ROD ELEVATOR. GEORGE NORDLOH, Hamilton, Kans. Filed June 9, 1924. Serial No. 718,855. 3 Claims. (Cl. 294—91.)

1. A sucker rod elevator comprising a yoke having an eye at one end, an arched portion at the other, the ends of the arched portion having bearings with openings polygonal in cross section, a jaw having a sucker rod receiving slot, trunnions on the jaw, polygonal portions on the trunnions movable into and out of engagement with the polygonal openings in the bearings, a spring for normally urging the polygonal portions into



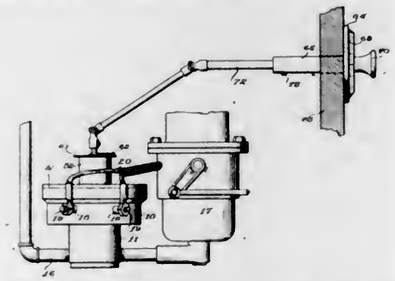
engagement with the polygonal openings in the bearings and a latch finger carried by one of the arms and extending across the slot in the jaw when the yoke is in one position with respect to the jaw and movable away from the slot when the yoke is in another position with respect to the jaw.

1,510,414. SPRING WHEEL. LESLIE R. PATTERSON, Kansas City, Mo. Filed Sept. 28, 1923. Serial No. 665,384. 1 Claim. (Cl. 152—31.)



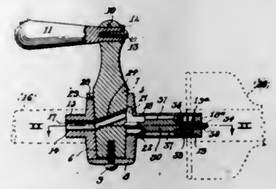
A wheel comprising a hub having a circumferential flange, a ring-shaped disk carried by the flange provided with outstanding annular flanges concentric with the center of the wheel, the disk being provided with an offset portion, a ring shaped cover plate co-operating with the off-set portion to provide an annular recess, arcuate blocks in the recess, radial guide rods, each consisting of two members, thimbles connecting the two members to form spring seats, coil springs about the guide rods resting on the seats, nuts carried by the inner circumferential flange on the ring-shaped disk against which the ends of the springs bear, the opposite ends of the springs bearing against the thimbles, the nut being adjustable in the flanges to vary the tension of the spring, means for securing each guide rod to a shoe, the other end of each guide rod passing through a nut and a tire about the segmental blocks.

1,510,415. GOLF-BAG HANDLE. GEORGE L. PIERCE, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Oct. 26, 1923. Serial No. 671,016. 3 Claims. (Cl. 150—1.5.)



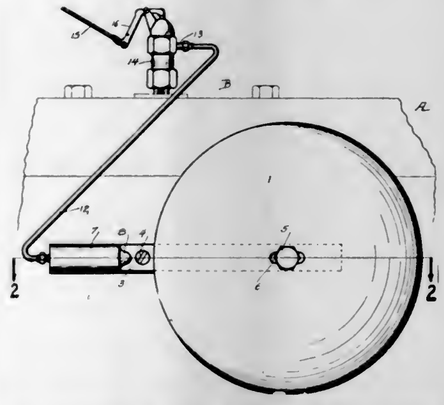
1. In a golf bag, a shoulder strap having one end attached to the upper portion of the bag, a hand grip secured to the bag and having its lower portion formed into a loop, a buckle held by said loop, the lower end of the shoulder strap being fastened to said buckle.

1,510,416. FORCEPS. FREDERICK PIETZ and JOHN COLETTI, Saginaw, Mich. Filed Apr. 15, 1922. Serial No. 553,039. 1 Claim. (Cl. 128—322.)



In forceps including a pair of handle members pivoted in cross relation, said handle members terminating at one end in finger grips and at their other ends in active jaws, lugs formed integrally upon the handle members near the finger grip equipped ends thereof and extending toward each other, one lug being formed with a plurality of openings extending therethrough and the other carrying a rivet having a projecting portion adapted to be engaged within a selected one of said openings, said projecting portion having a beveled surface and square retaining shoulder.

1,510,417. LOCKING DEVICE FOR MOTOR VEHICLES. ERNEST W. PHIGAN, Billings, Mont., assignor to Gage H. Kain, Billings, Mont. Filed Apr. 29, 1922. Serial No. 557,473. 1 Claim. (Cl. 70—53.)

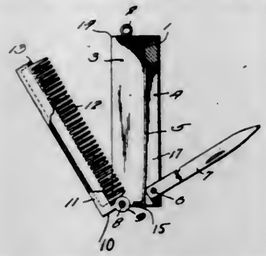


In a locking device for motor vehicles, the combination of a controlling shaft, a fixed base plate around the end of said shaft, a plate resting against the base plate and having an annular series of openings concentric with the shaft, a ring engaging over the edge of the last-mentioned plate and holding it to the base plate, a dial plate secured on the shaft over the ring, and a pin carried by the dial plate and selectively engageable in the openings in the second-mentioned plate.

1,510,418. PRESSURE-REGULATING GAS VALVE. CLARENCE SEELEY, Elmira, N. Y. Filed May 16, 1923. Serial No. 639,371. 2 Claims. (Cl. 67—121.)

1. In a device of the class described, a casing, tubular extensions carried by said casing constituting inlet and outlet passages for the same, a valve seat associated with said outlet extension, a valve positioned in said casing for controlling the amount of flow passing therethrough, a longitudinally grooved member positioned in said outlet extension, a reduced axially extending stem having a passage therethrough forming a part of said member, a valve surface on said stem intermediate its length, and an additional reduced stem carried by said member for moving said surface against said seat for restricting the discharge to the passage through the first mentioned stem when the casing carried valve is moved to a predetermined position.

1,510,419. SIGNAL. DAN E. SEEMAN, Republic, Pa. Filed Feb. 5, 1924. Serial No. 690,839. 1 Claim. (Cl. 116—58.)

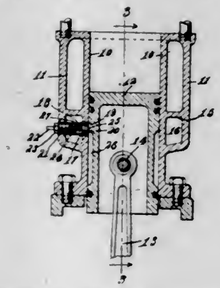


In combination with an internal combustion engine, a cylinder, a striker slidably mounted in the cylinder to be projected beyond one end thereof, said striker fitting snugly within the cylinder, a resonant member positioned to be struck by the striker when the latter is projected, and means for establishing communication between said cylinder and one of the cylinders of the engine for reciprocating the striker in accordance with reciprocation of the piston in the engine cylinder.

1,510,420. COMB AND KNIFE CASING. CHARLES H. SHERMAN, North Attleboro, Mass. Filed Apr. 15, 1922. Serial No. 553,276. 5 Claims. (Cl. 7—16.)

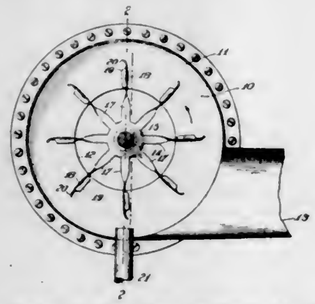
1. As a new article of manufacture, a casing for holding both a knife and a comb, a comb-carrying case pivotally mounted on said casing, and a knife-holding

case inserted in one side of said casing and including a spring element having its free end engaging the shank



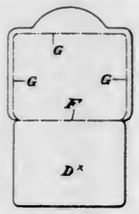
of the knife to control its operation, the first-named casing having a slot through which the knife may open.

1,510,421. BEAD BRACELET OR EARRING AND METHOD OF MAKING SAME. CHARLES H. SHERMAN, North Attleboro, Mass. Filed Apr. 15, 1922. Serial No. 553,277. 3 Claims. (Cl. 63—2.)



2. In a bead bracelet or earring, the combination of a flexible wire strand, a metal bead affixed to one end of said strand, the metal bead having an opening positioned opposite the portion of the bead which is affixed to the end of the strand, beads of other material strung on the strand, a hook formed in the other end of the strand, said hook being engageable on the inner edge of the bead adjacent to the opening to secure the bracelet or earring together.

1,510,422. LUBRICATING DEVICE. CLEMENS H. STEINBRECHER, Quincy, Ill. Filed Jan. 13, 1922. Serial No. 528,904. 2 Claims. (Cl. 74—108.)



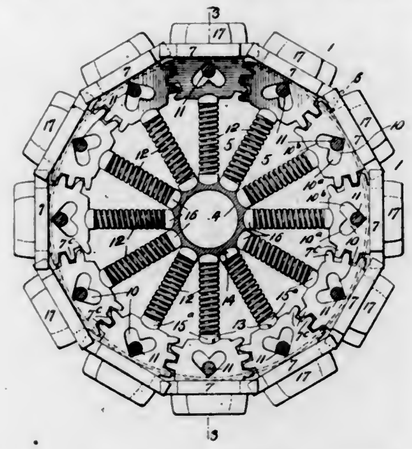
1. The combination with a cylinder and a piston operating therein, of a lubricant reservoir, a valve casing extending across the oil reservoir having one end secured within an opening provided in the cylinder, said casing also having an opening therein for communication with the reservoir, a valve seat at the inner end of the casing and having a port for communication with the lubricant reservoir and a spring actuated valve extending within the cylinder and normally engaging the valve seat and means extending from the valve within the cylinder for engagement by the piston, whereby a predetermined quantity of lubricant will be admitted to the cylinder from the reservoir.

1,510,423. COMBUSTIBLE-MIXTURE-FORMING DEVICE. HUDSON A. TEDMAN, Galesburg, Ill., assignor to Winslow Boiler & Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1920. Serial No. 400,280. Renewed Mar. 10, 1924. 3 Claims. (Cl. 158—77.)

2. In a device of the class described, a cylindrical casing having an air-inlet in one side and a tangential outlet in its lower portion, an oil supply pipe adjacent said outlet, a rotatable shaft, a plurality of fan blades on the shaft having forwardly-facing spoon-shaped beater-heads formed at their ends and provided with wings on the sides of their concave portions.

1,510,424. X-RAY-FILM CARRIER. SINCLAIR TOUSEY, New York, N. Y. Filed Feb. 10, 1919. Serial No. 275,988. 6 Claims. (Cl. 250—34.)

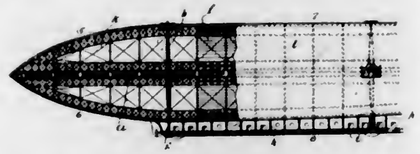
1. An X-ray film carrier of impressionable material having comparatively narrow edge portions turned upon itself to hold the film leaving one face bounded by said turned edge, a suitable substance overlying the film and protecting it on the latter face of the carrier, said carrier having a finger piece at and projecting relative to its narrow edge which when pulled upon will open the carrier.



1,510,425. PROCESS FOR THE PRODUCTION OF ETHYLESTERS OF HALOGEN SULPHONIC ACIDS. WILHELM TRAUBE, Berlin, Germany. Filed June 28, 1920. Serial No. 392,440. 8 Claims. (Cl. 260—98.)

4. A process for the production of ethylesters of halogen-sulphonic acid by treating this acid with ethylene consisting in bringing into contact with halogensulphonic acid while cooling, gases that contain ethylene in a very diluted state only.

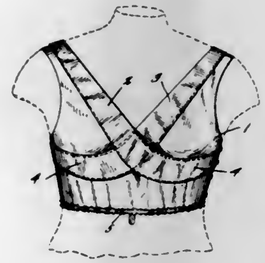
1,510,426. WHEEL. HERMAN TYD, Valley Stream, N. Y., assignor of one-half to Henry Semke, Lynbrook, Long Island, N. Y. Filed May 6, 1921. Serial No. 467,502. 7 Claims. (Cl. 305—13.)



1. A wheel for vehicles and the like comprising a wheel body having a traction surface composed of a series

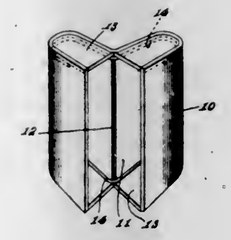
of track sections each independently connected with the wheel body and each having a plurality of teeth at each end, the teeth on adjacent ends of said track sections

having at all times an intermeshing engagement with each other to move the track sections gradually into alignment as they contact with the ground and to prevent clattering.



1,510,427. RIGID AIRSHIP. GUSTAV UNGER, Hannover, Germany. Filed Jan. 14, 1924. Serial No. 686,144. 2 Claims. (Cl. 244—6.)

1. A rigid air-ship, comprising, in combination, a channel-forming central longitudinal structure; cross-shaped structures connected at their centre parts with said longitudinal structures; double annular circumferential structures connected with the outer ends of said cross-shaped structures, one annulus of each pair of these structures being located inside the other one; lateral outer structures projecting beyond some of said circumferential structures and forming elongations of some of the horizontal members of said cross-shaped structures and being adapted to carry the propellers and the motors; downwardly extending structures projecting also beyond some of said circumferential structures and forming elongations of some of the vertical members of said cross-shaped structures and being adapted to carry the structure supporting the cabins; wires connecting the inner annuli of the said circumferential structures with each other, and wires connecting their outer annuli with each other; gas-bags housed in the gas-cell forming compartments formed by, and located between, said structural parts of the air-ship body, except said outer wires; and an envelope enclosing these parts and being supported also by the said outer wires, substantially as set forth.

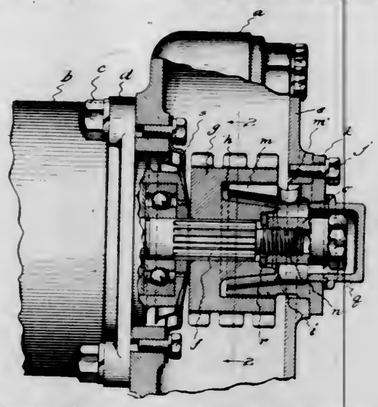


1,510,428. BRASSIÈRE. AGNES VOLIVA, Portland, Oreg., assignor to Bank of Italy of San Francisco, trustee, San Francisco, Calif., a Corporation of California. Filed Aug. 14, 1923. Serial No. 657,395. 1 Claim. (Cl. 2—42.)

A garment of the class described comprising a body member shaped to fit the upper portion of the wearer's body and having breast supports in the form of straps extending continuously throughout the body structure of the garment, each strap extending in said body structure from one shoulder down under the opposite breast and up across the back of the said shoulder, the portion of each strap extending under the breast being curved to conform to the shape of the breast and the rear portions of

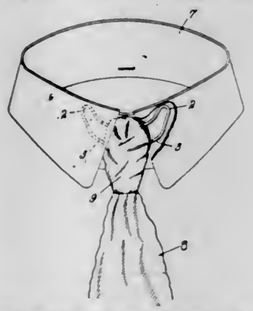
the straps being crossed and secured together at said crossed portions, the front portions of the straps being crossed and secured together between the breasts, said body member extending about the waist and below said strap, said body member having a closure at one side under the arm intersecting one of said straps for positioning and removal of the garment.

1,510,429. CIGARETTE CASE. CHARLES N. WATSON, St. Joseph, Mo., assignor of one-fourth to Charles Curtis Wright, St. Joseph, Mo. Filed Mar. 7, 1923. Serial No. 623,478. 1 Claim. (Cl. 206—41.)



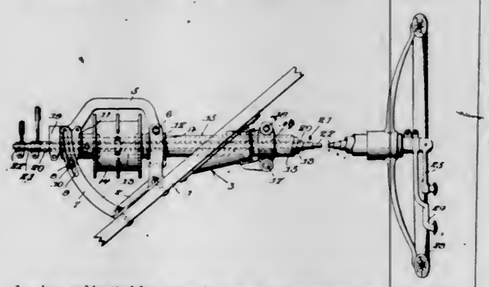
A receptacle of the character described including a single sheet of flexible material adapted to form the back, front and sides of a receptacle, and end members secured to the edges of said sheet to define the ends of the receptacle, said sheet being bendable along a line opposite the meeting edges whereby to effect opening of the receptacle, and an open loop like spring conformingly fitting within each end of the receptacle for assisting in holding the same closed, the spring traversing the line of bending and having its ends terminating near the meeting edges.

1,510,430. SPROCKET MOUNTING. D'ORSAY MCCALL WHITE, Detroit, Mich. Filed Dec. 10, 1923. Serial No. 679,618. 11 Claims. (Cl. 74—56.)



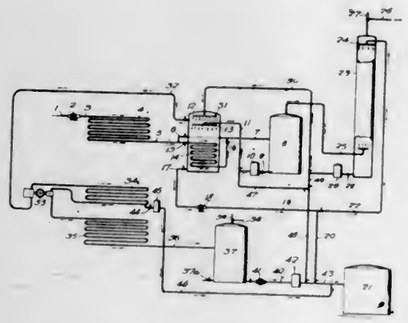
1. In an automobile power plant, the combination of a housing, a rotating member, an operative unit provided with a shaft adapted to slidably engage in the hub of the

rotating member in driving relation, a flexible driving element passing over the rotating member, and means in



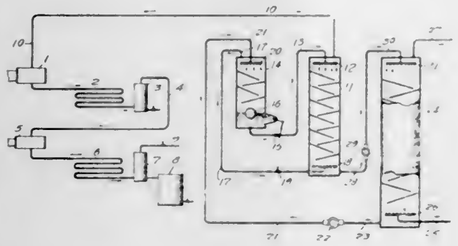
said housing for supporting such rotating member in its proper position when the shaft is withdrawn from the rotating member.

1,510,431. NECKTIE HOLDER. ROBERT WIRZ, Milwaukee, Wis. Filed Dec. 1, 1922. Serial No. 604,328. Renewed Aug. 21, 1924. 2 Claims. (Cl. 24—56.)



1. As a new article of manufacture, a necktie holder comprising a major portion of wire including a dished top bar, lower bars joined through bights to the ends of the top bar and extending inwardly from said bights to points below and adjacent to the central portion of the top bar and having loops at their inner ends, and pendent yoke portions into which the said loops merge, and a central solid body of solder through the medium of which the latter loops and the central portion of the top bar are fixedly connected together.

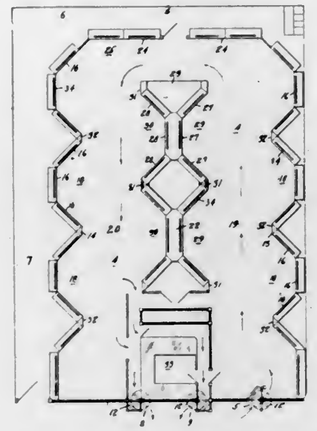
1,510,432. STEERING GEAR. PAUL B. WOHLRAB, Racine, Wis. Filed Oct. 1, 1923. Serial No. 665,978. 4 Claims. (Cl. 114—160.)



1. An adjustable steering gear comprising a bracket having front and rear standards, a bearing yoke pivotally mounted attached to the rear standard and adjustably attached to the front standard, a pair of bearings carried by said yoke, a steering post journaled in said bearings, and a steering drum fixed to said post between the bearings.

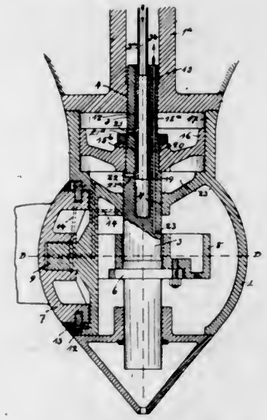
1,510,433. RECOVERING GASOLINE. FRED E. HOSMER, Shreveport, La. Filed May 4, 1922. Serial No. 558,329. 6 Claims. (Cl. 196—7.)

1. In the recovery of gasoline from gas the process which comprises compressing and cooling the gas, separating the condensate formed from the residual gas, evaporating high volatile oils from the condensate to form a residue of low volatile oils and scrubbing the residual gas with the said low volatile oils.



1,510,434. PROCESS OF RECOVERING GASOLINE. FRED E. HOSMER, Shreveport, La. Filed June 6, 1923. Serial No. 643,743. 2 Claims. (Cl. 196—8.)

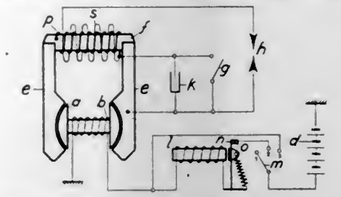
1. In the recovery of gasoline from natural gas and the like by scrubbing with oil, the process of recovering gasoline from the charged oil which comprises subdividing such oil to offer extensive surfaces at or near atmospheric pressure, collecting evolved vapors and gases, again subdividing the oil at a pressure materially below atmospheric and transmitting said evolved vapors and gases in countercurrent to said oil in the second subdividing.



1,510,435. APPARATUS FOR VENDING MERCHANDISE. EDWIN W. TRAPP, San Francisco, Calif., assignor, by mesne assignments, to Jenny Wren Stores, Inc., San Francisco, Calif., a Corporation of Delaware. Filed July 23, 1921. Serial No. 487,157. 6 Claims. (Cl. 211—8.)

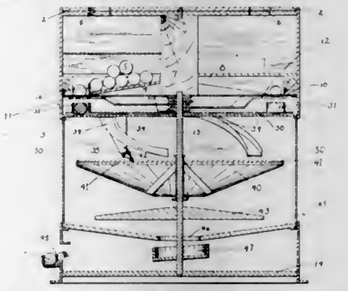
4. In a self-serving store the combination with a lobby provided with entrance and exit gates and checkers' stands, of shelves on opposite sides of the store in the rear of the checkers' stands and arranged in zig-zag fashion from front to rear of the store along the sides

thereof and enclosing an open space forming a salesroom, the shelves being so arranged that they are presented to view of the checkers and a greater length of shelf room is provided.



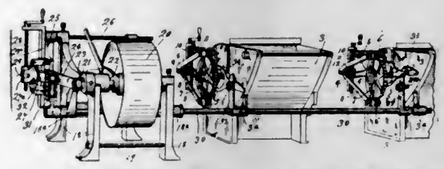
1,510,436. HUB FOR IMPELLERS WITH TURNABLE VANES. JOHN ELOV ENGLESSON, Kristinehamn, Sweden. Filed Mar. 14, 1923. Serial No. 624,938. 28 Claims. (Cl. 170—163.)

1. In water turbine impellers of the character described the combination with adjustably turnable vanes, a hub for same, a mainshaft, a hollow cylinder connected to the shaft and thus rotating with same, a piston movable in said cylinder and operatively connected with said vanes, fluid means for operating said piston and distributing means for said fluid in said piston.



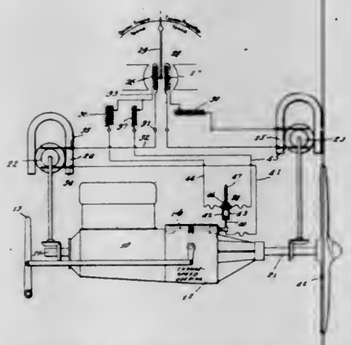
1,510,437. ELECTRIC IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JACQUES BOHLI, Solothurn, Switzerland, assignor to the Firm Scintilla, Solothurn, Switzerland. Filed Apr. 1, 1924. Serial No. 703,561. 3 Claims. (Cl. 123—148.)

1. An electric ignition apparatus for internal-combustion engines including a pair of yoke members, a stationary iron core connecting said yoke members and on which are mounted the usual primary and secondary windings, a make and break device operated mechanically by the engine and associated in the usual manner with



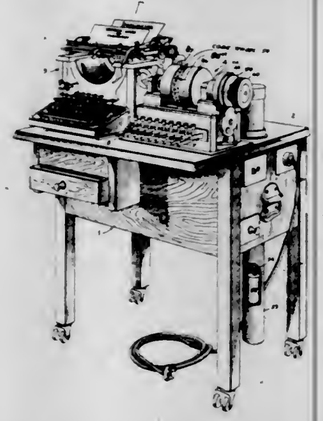
said primary winding, a sparking plug in series with said secondary winding, an iron rotor and an electric circuit comprising in series connection a magnetizing coil on said rotor, a battery and a buzzer.

1,510,438. COIN-CONTROLLED VENDING AND GAME DEVICE. HENRY OSGOOD NOYES and BLAINE KITZMILLER, Oakland, Calif.; said Kitzmiller assignor to said Noyes. Filed Apr. 16, 1923. Serial No. 632,309. 8 Claims. (Cl. 194—1.)



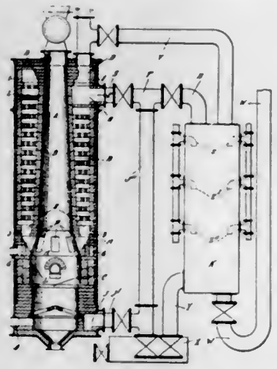
1. In a device of the character described, the combination of a receptacle divided into compartments for displaying articles of merchandise on sale, separate coin-controlled mechanisms for placing in playable position one of the number of articles contained in each compartment, actuating means for releasing into play simultaneously with each other all articles previously placed in playable position, and a baffle for irregularly retarding the delivery of the articles released in order to render it impossible to predetermine which one from among them will first emerge from the body of the device.

1,510,439. TRANSMISSION MECHANISM FOR FEEDERS CONNECTED IN A GANG. EMIL R. DRAVER, Richmond, Ind., assignor to B. F. Gump Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1918. Serial No. 242,812. 14 Claims. (Cl. 83—44.)



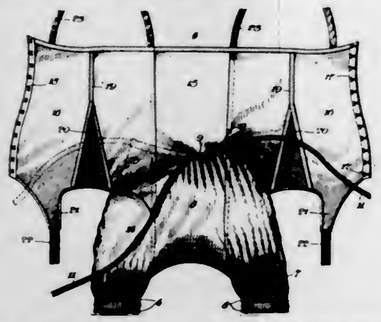
1. An apparatus for proportionately feeding different fine or granular materials comprising a battery of feeding devices, each constituting a separate machine unit having a feeding mechanism, a single rotatable driving mechanism, an oscillating means driven by said rotatable driving mechanism extending to all of said feeding devices and independently variable means connecting said oscillating means with each of said feeding mechanisms for operating the latter, and means for varying the degree of oscillation of said oscillating means.

1,510,440. CHANGE-SPEED INDICATOR. NORMAN H. GILMAN, Indianapolis, Ind., assignor to Allison Engineering Co., Indianapolis, Ind., a Corporation of Indiana. Filed June 22, 1923. Serial No. 647,161. 7 Claims. (Cl. 235—103.5.)



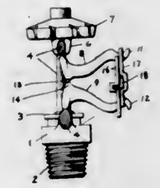
1. In combination, two members to be interconnected, a change-speed gearing between said two members for connecting them in a plurality of different gear ratios, pressure-producing devices connected to said two members to be driven thereby, and a measuring device having two elements acting in opposition and arranged to be subjected to pressures created by two pressure-producing devices connected to said two members.

1,510,441. ELECTRIC CODING MACHINE. EDWARD H. HEBERN, Oakland, Calif., assignor to H. & H. Patent Developing Company, Oakland, Calif. Filed Mar. 31, 1921. Serial No. 457,419. 21 Claims. (Cl. 197—4.)



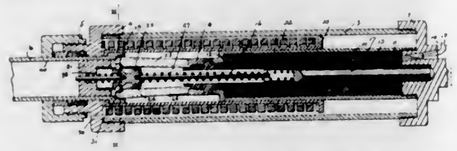
1. A coding and decoding machine comprising a plurality of circular series of stationary contacts arranged in the same fortuitous order, a circuit changing device including a movable member and contacts arranged on the opposite sides of and movable with said member, a plurality of coding keys, and electrically operated printing key actuating means controlled by said coding keys and including the first and second mentioned contacts, the contacts on one side of said movable member being connected with the contacts on the opposite side thereof in complementary pairs so that the operation of a coding key causes the printing of a certain letter through the printing key actuating means while, with the movable contacts in the same position, the operation of a coding key corresponding to the letter so printed will cause the printing of the letter of the first mentioned key.

1,510,442. PROCESS OF MANUFACTURING HYDROGEN OR GASES RICH IN HYDROGEN. JOHN HENRY WEST, Bayswater, London, ARTHUR JAQUES, Waterloo, and CORNELIUS BRITTIFFE TULLY, Newark-on-Trent, England. Filed Jan. 10, 1923. Serial No. 611,733. 5 Claims. (Cl. 48—198.)



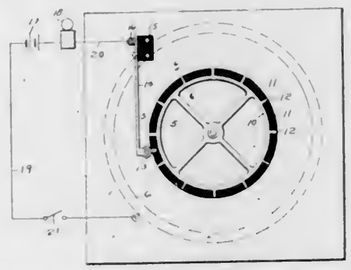
1. A process for the production of hydrogen or gases rich in hydrogen which consists in completely gasifying coal in an intermittent mixed gas generator, taking off from the generator the hot mixture of gases resulting from the complete gasification, the said gases consisting largely of hydrogen and carbon monoxide with some carbon dioxide, subjecting the said mixture of gases while still in the heated condition and without any intermediate cooling to treatment with steam in the presence of a catalyst in a carbon monoxide converter and maintaining a gradual fall of temperature between the two ends of the said converter by introducing a portion of the required amount of steam at or near that end of the converter at which the hot mixture of gases from the generator is admitted and the remainder of the steam required at a plurality of points between the two ends of the converter.

1,510,443. COMBINATION GARMENT. LEON KAHN, Brooklyn, N. Y. Filed May 22, 1923. Serial No. 640,604. 2 Claims. (Cl. 2—71.)



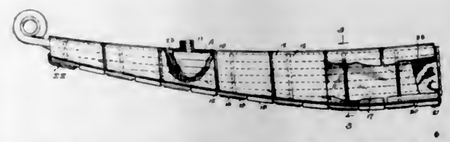
1. A combination garment comprising a body portion and bloomers connected thereto, the front of the bloomers being connected to the front portion of the body and extending from the center of the body at one side to the center of the body at the other side, the back of the bloomers being extended to form a flap which extends upwardly to the waist line of the wearer and substantially the same width as the front where they are joined to the body, means for securing the top of the flap about the waist of the wearer independently of the body of the garment, the back of the body being formed of lateral extensions connected to the body portion and arranged to extend over the hips of the wearer, and means for securing the edges of the extensions to each other at the back.

1,510,444. SPRINKLER HEAD. CURTIS T. CLIFFORD, San Francisco, Calif. Filed Feb. 24, 1919. Serial No. 278,620. 8 Claims. (Cl. 169—42.)



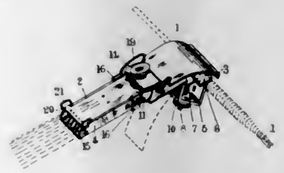
1. A sprinkler head link constructed of two plate members each having a transverse groove at right angles to the proximate faces of the plates and constructed to conform one with one leg and the other with the other leg of an angle bar, and an angle bar disposed in the slots so formed.

1,510,445. BALL-LOCK RELEASE AND SPRING-ACTUATING MECHANISM. GEORGE J. HENRY, San Francisco, Calif., assignor to William H. Avery, San Francisco, Calif. Filed Feb. 14, 1924. Serial No. 692,930. 6 Claims. (Cl. 74—93.)



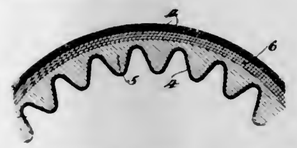
1. In a locking and release device comprising a tubular shell and an enclosed spring, a member extending through said shell and actuated by said spring to move longitudinally with respect to said shell when released, releasing means for said member comprising tumbler means normally locking said member and resting on spherical elements, a spool concentric with said tumblers, spherical elements interposed between the spool and the tumblers, and actuating means to move the thimble whereby the said elements are rolled with respect to the tumblers, enabling the tumblers to move to unlock the member.

1,510,446. BELL RINGER. ADOLPH H. MILLER, Jasper, Minn. Filed May 10, 1923. Serial No. 638,115. 2 Claims. (Cl. 200—37).



2. A time operated circuit closer comprising relatively fixed and movable contact elements, and a time-piece having its hour indicator provided with an extension in sliding engagement with contact members carried by said stationary element and its minute indicator operating in synchronism with the movable element, the latter consisting of a wheel, an insulating ring mounted on the periphery of the wheel, and uniformly spaced segments inset in the insulating ring and flush with the outer periphery of the latter.

1,510,447. COVER FOR VEHICLE SPRINGS. DENNIS B. D. BLAKE, Quincy, Ill. Filed Feb. 24, 1923. Serial No. 621,022. 3 Claims. (Cl. 267—37.)

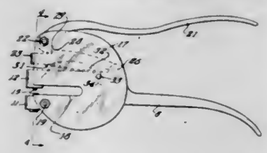


1. In a protective cover for vehicle springs, a shell split longitudinally at the under side, said shell having slots extending from the split or opening in the under side of the shell transversely along the bottom and sides, and additional short slots extending into the bottom portions of the shell from the edges thereof and terminating short of the sides of the shell, said shell, between adjacent slots, presenting tongues, the tongues at one side overlapping material at the opposite side of the split or opening, and a key strip about which alternate tongues are bent.

1,510,448. APPLIANCE FOR PERMANENT HAIR WAVING. ARNOLD H. BONGERS, London, England, assignor of one-half to Gaston Boudon, London, England. Filed Apr. 10, 1923. Serial No. 631,160. 16 Claims. (Cl. 132—31.)

1. An appliance of the kind set forth, comprising a hinged two part clamp device, a passage therethrough for a curler, a second passage thereinto for hair communicating with the first passage, said passages being both rendered accessible by opening of the parts of the clamp to permit a strand of hair attached to a curler being positioned therein, and means in the curler passage for resiliently gripping the curler.

1,510,449. METHOD OF MANUFACTURING MACHINE BELTS. FERDINAND F. BRUCKER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Company of Ohio. Filed Sept. 23, 1921. Serial No. 502,635. 4 Claims. (Cl. 154—4.)



2. The hereindescribed method of making machine belts which consists in supporting an endless strip of bias rubberized fabric so that it will be transversely waved or pleated, filling the exterior recesses formed by said waves or pleats with rubber compound, applying over the surface of said rubber compound rubberized cord tension material, folding the margins of said bias fabric around said tension material and vulcanizing the whole together.

1,510,450. PUNCH. GEORGE H. SPENGLER, Rockford, Ill. Filed Apr. 12, 1923. Serial No. 631,495. 7 Claims. (Cl. 164—120.)

1. A punch comprising, in combination, a stationary handle having formed integrally therewith a lower die-carrying head and an upper punch-guiding head in rigid

relative relation and separated at one end by a material-receiving mouth, a die in the die-carrying head, a punch guided in the punch-guiding head to slide toward and from the die in axial alinement therewith at all times, side plates pivotally connected to the head structure, a movable handle lever interposed between and pivotally

mounted on the side plates, and a punch-operating lever pivotally attached to the stationary handle and operatively engaged at its free end between the punch and said movable handle lever for transmitting punching pressure to the punch by downward movement of the handle lever without disturbing said alinement of the punch and die.

1,510,451. PUNCH. GEORGE H. SPENGLER, Rockford, Ill. Filed Nov. 5, 1923. Serial No. 672,715. 3 Claims. (Cl. 164—120.)

1. A punch of the character described comprising a head having a handle and a punch-carrying part, a punch element slidable in said part, a punch-moving part pivoted on the head and adapted to be swung on its pivot into and out of an operative position to withdraw the punch element from the head when swung to its inoperative position, an operating lever, means connecting said lever to the head and adapted to hold the lever in either operative or inoperative relation to said punch-moving part, in the former of which relation the lever co-operates with said punch-moving part and is adapted to impart

pressure to the punch element, and in the latter it permits swinging of said punch-moving part to its inoperative position, said means having a slot opening, and a stop member connected to the head and passing through said opening for normally holding said means and the operating lever in the said operative relation and being removable from said slot opening for permitting said lever and said means to be moved to said inoperative relation.
